I. District Mission Statement

The mission of the North Plains Groundwater Conservation District as adopted by the Board of Directors:

> *Maintaining our way of life through conservation, protection, and preservation of our groundwater resources.*

II. Purpose of Management Plan

During the 1997 Texas legislative session, the legislature enacted into law Senate Bill 1 (SB 1) which established a comprehensive statewide water planning process.

SB 1 requires groundwater conservation districts to prepare and have approved by the Texas Water Development Board a 50-year management plan. The management plan establishes the framework to achieve aquifer Desired Future Conditions (DFC), identifies water supply resources and needs, identifies management strategies, and specifies the management goals of the District. The management plan must be readopted or revised at least every five years, and serves as a guide to the District when making decisions.

Senate Bill 2 (SB 2) was enacted by the Texas Legislature in 2001, and House Bill 1763 (HB 1763) was enacted in 2005 building on the planning requirements of SB 1 and to further clarify the actions necessary for districts to manage and conserve the groundwater resources in the State of Texas. The management plan must address the following management goals, as applicable:

1. Providing the most efficient use of groundwater;
2. Controlling and preventing waste of groundwater;
3. Controlling and preventing subsidence;
4. Addressing conjunctive surface water management issues;
5. Addressing natural resource issues;
6. Addressing drought conditions;
7. Addressing conservation, recharge enhancement, rainwater harvesting, precipitation enhancement, or brush control, where appropriate and cost-effective; and
8. Addressing the desired future conditions (DFC) adopted by the district.

North Plains Groundwater Conservation District's (District) management plan satisfies the requirements of SB 1, SB 2, HB 1763, the statutory requirements of Chapter 36 of the Texas Water Code, and the administrative requirements of the TWDB Rules.

III. Criteria for Plan Certification [1, 2, 3]

This management plan will be in effect upon approval of the Texas Water Development Board (TWDB) and will remain in force until it is replaced by a revised management plan approved by

the TWDB. The District is required to review and readopt with or without amendment at least once every five years, or more frequently if the District deems necessary or appropriate.

Proposal of Plan

The District's Board of Directors (Board) proposed the management plan at the Board meeting held on _____.

Public Hearings

The District held two public hearings on _____ and _____. A total of _____ stakeholders attended the meetings. Copies of the notice of hearing and transcripts of the hearings are in Appendix B and C respectively.

Plan Adoption

The Board approved the adoption of the management plan on _____, and a copy of the resolution is in Appendix A.

Coordination with Surface Management Entities

Three water management entities, Palo Duro Water District (PDWD) Red River Authority of Texas and the Canadian River Municipal Water Authority (CRMWA, have a portion of their jurisdiction located within the District's jurisdiction. The District coordinated with the Canadian River Municipal Water Authority, The Red River Authority and Palo Duro Water District. Copies of the correspondences between the District and the other entities are in Appendix D.

IV. District Information

Creation

In 1949, the Texas Legislature authorized the creation of underground water conservation districts to perform certain prescribed duties, functions, and hold specific powers as outlined in Article 7880-3c, Texas Civil Statutes. The Legislature codified this portion of the Texas Civil Statutes into Chapter 52 of the Texas Water Code. Later, the Legislature amended the Texas Water Code and moved the statutes into Chapter 36. In 1955, voters created the District through a confirmation election. The District was established under Texas Constitution, Article III, Section 52 or Article XVI, Section 59. The District has the authority to regulate the spacing of water wells, the production from water wells, or both, with the goals of conserving and protecting the underground water resources of Texas and preventing the waste of groundwater.

Location and Extent

The District's area of management responsibility extends over 7,335 square miles in the northern Texas Panhandle encompassing all of Dallam, Hansford, Lipscomb, Ochiltree, and Sherman

Counties, as well as parts of Hartley, Hutchinson, and Moore Counties. The District is located north of Amarillo and north of the Canadian River.

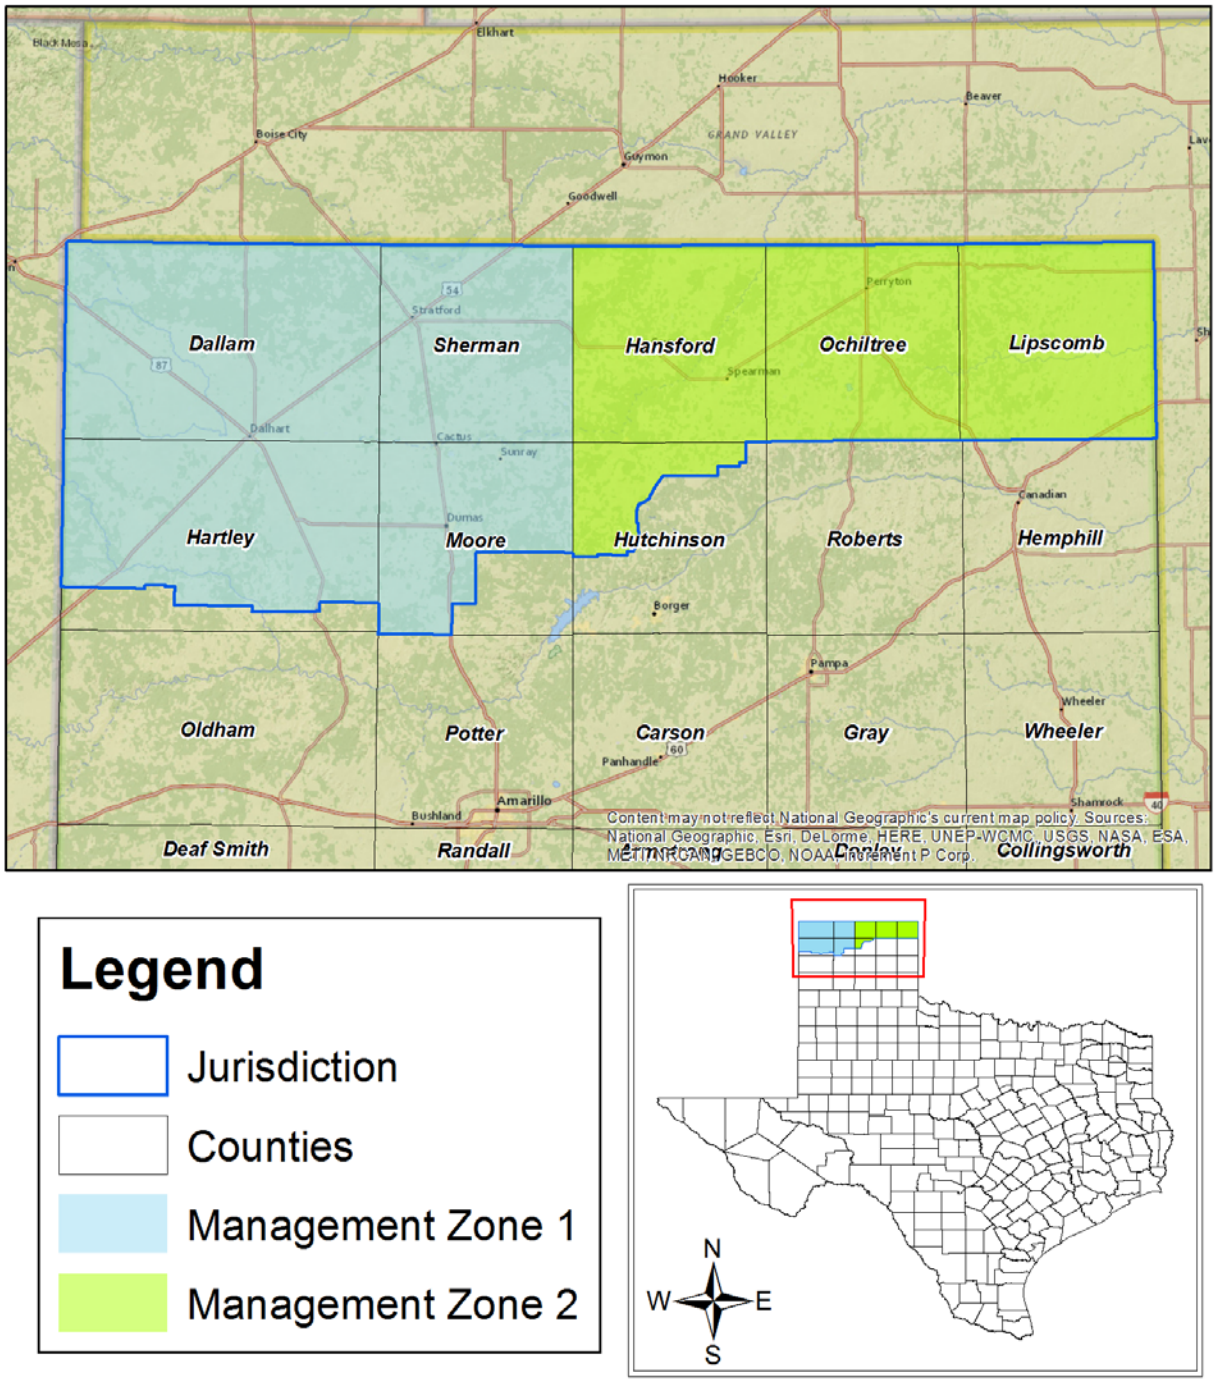

Figure 1: Map of the District's Jurisdiction.

Since the District does not cover all of Hartley, Hutchison, and Moore counties, data provided by the TWDB was used for all estimates related to demand based on a proportional area percentage. This percentage was derived by dividing the number of acres or square miles covered by the

District by the total number of acres or square miles contained within each county. The entire county areas, the total county areas in the District, and the TWDB computation of the percentage of county areas within the District are as follows:

Table 1: The Area of the District in Square Miles.

County	County Area	Area in District	Percent
Dallam	1,505	1,505	100.00%
Hartley	1,463	1,244	83.56%
Moore	914	699	76.51%
Sherman	916	916	100.00%
Hutchinson	894	278	30.55%
Lipscomb	934	934	100.00%
Hansford	907	907	100.00%
Ochiltree	907	907	100.00%
West	4,798	4,365	
East	3,642	3,026	
Totals	8,440	7,390	

Groundwater is the primary water supply source for an agricultural economy within the eight counties of the District. In 2014, the value of agriculture within the region was $2.847 billion. The TWDB provided population projections for each of the counties, and the projected population in the District's counties totaled 76,662 people for 2020 and projected to grow to 105,413 people by 2070. The following table reflects the TWDB projected population for each of the District's counties.

Table 2: Projected Population for the District [4].

County	2020	2030	2040	2050	2060	2070
Dallam	7,744	8,720	9,747	10,759	11,733	12,671
Hartley	5,248	5,541	5,696	5,807	5,907	5,986
Moore	19,714	22,471	25,407	28,388	31,497	34,680
Sherman	3,294	3,571	3,720	3,853	3,949	4,020
Hansford	1,740	1,859	1,959	2,049	2,140	2,229
Hutchinson	24,017	24,877	25,098	25,098	25,098	25,098
Lipscomb	3,599	3,858	4,011	4,211	4,350	4,465
Ochiltree	11,305	12,158	13,075	14,061	15,122	16,264
West	36,000	40,303	44,571	48,808	53,086	57,357
East	40,661	42,753	44,143	45,419	46,710	48,056
Total	76,662	83,056	88,714	94,227	99,797	105,413

Background

The District's main office is located at 603 East 1st Street, Dumas, Texas 79029. The District's office hours are from 8:00 am to 12:00 pm and from 1:00 pm to 5:00 pm Monday through Friday except holidays.

The District is governed by an elected seven-member Board of Directors. Each Director is elected from a defined area within the District for a four-year term. The elections are held in November of each even-numbered year in accordance with Chapter 36 and the Texas Election Code. The Board elect's officers after each Director election and these officers serve for two-year terms. The Board of Directors holds regular meetings at the Richard S. Bowers Conservation Learning Center located at 6045 W Road E, Dumas, Texas 79029.

The Board develops and adopts the Rules and programs, establishes practices, hires the general manager, sets the annual budget, and determines the tax rate necessary to carry out the operations of the District. The Directors conduct themselves in a manner consistent with sound ethical and business practices; consider the public interest in conducting District business; avoid impropriety, or the appearance of impropriety, ensure and maintain public confidence in the District; and control and manage the affairs of the District lawfully, fairly, impartially, and without discrimination, and in accordance with the stated purposes of the District. In September 2005, the Board developed and adopted a document which sets forth the District's Director Policies.

The District employs a general manager to manage the administrative affairs of the District and who, in the absence of the Secretary of the Board, may act as secretary to the Board and may attest on behalf of the District. The general manager performs all duties outlined in the Rules, personnel policies, and the job description of the general manager to the reasonable satisfaction of the Board of Directors. The general manager's duties specifically include the employment and supervision of personnel, oversight of the financial matters, attendance of Board and Board committee meetings, and the submission of reports to the Board concerning all phases of the services and operations of the District. Further, the general manager's duties include the continued review, development, and enforcement of the Rules. The general manager also performs any other duties which may be assigned to him by the Board from time-to-time.

The District maintains a qualified staff to assist water users in protecting, preserving, and conserving the aquifers. The Directors bases its decisions on the best data available and treats all water users equitably and equally. The Directors determine the programs and activities that the District shall undertake to provide the best possible management of the area. The Rules are enforced to protect the quality of the groundwater and to prevent the waste of this precious resource.

Authority and Framework

The District derives its authority to manage groundwater within its jurisdiction by the powers granted and authorized under Section 59, Article XVI, Texas Constitution, Texas Water Code,

Chapter 36, and Government Code Chapter 8870. The District, acting under such authority, assumes all the rights and responsibilities of a groundwater conservation district specified in TWC Chapter 36. The District's goal is to provide sound management of groundwater resources and make every effort to ensure that an abundant supply of potable water will be available for many future generations.

Groundwater Management Area and Joint Planning

TWC Chapter 36 requires joint planning among groundwater conservation districts (GCDs) that are in the same Groundwater Management Area (GMA). These GCDs must establish the DFCs of the aquifers within their respective GMA every five years. Through this process, the GCDs consider the varying uses and conditions of the aquifer within the management area that differs substantially from one geographic area to another. The District is entirely in Groundwater Management Area 1 (GMA-1), which also includes Hemphill County Underground Water Conservation District, Panhandle Groundwater Conservation District, and part of High Plains Underground Water Conservation District. This management plan utilizes information from GMA-1 joint planning cycle completed by the districts in 2017.

GMA-1 and the District adopted DFCs relative to the area during the joint planning process. Based on the specified DFCs, TWDB's executive administrator provides each district with the modeled available groundwater (MAG) in the management area. TWC Chapter 36 requires these management plans to include the aquifers' DFCs within the district's jurisdiction and the MAG for each aquifer. Well owners within the District withdraw groundwater from three aquifers: Ogallala, Rita Blanca, and Dockum Aquifers.

Ogallala and Rita Blanca Aquifers' Desired Future Conditions

GMA 1 included the Rita Blanca Aquifer in the Ogallala Aquifer DFC. In places, the Rita Blanca Aquifer is hydraulically connected to the Ogallala Aquifer and the underlying Dockum Aquifer. Though the report goes on to say that irrigation accounts for most of the groundwater use from this aquifer, Texline being the only community that uses the aquifer for municipal water supply. GMA-1 and the District adopted Ogallala Aquifer DFCs inclusive of the Rita Blanca Aquifer within the District's jurisdiction as follows:

- 40% volume in storage remaining in 50 years in Dallam, Hartley, Sherman and Moore Counties; and
- 50% volume in storage remaining in 50 years in Hansford, Hutchinson, Ochiltree and Lipscomb Counties.

Dockum Aquifer's Desired Future Conditions

GMA-1 and the District adopted a DFC for the Dockum Aquifer in Dallam, Hartley, Moore and Sherman counties in the District that at least 40 percent of the available drawdown will remain in the next 50 years.

V. District Rules and Management of Groundwater [5]

With substantial input and feedback from stakeholders the District's Board of Directors established the District's Rules in accordance with state law to successfully implement the management plan. The Rules are strictly and fairly enforced. The District may amend the Rules as necessary to comply with changes to Texas law and to ensure the best management of the groundwater within the District. The Rules govern the management strategies of the District, including, but not limited to, well permitting, well spacing, production reporting, annual allowable production, waste of groundwater, achieving DFCs, and establishing a groundwater conservation reserve. The District executes its responsibilities with transparency and places stakeholder involvement as a priority, exceeding the legal requirements for notice and hearings on meetings and other District activities. All District documents are made available to the public pursuant to the Texas Public Information Act. In addition to the District's management plan, the District's Rules can be obtained online from the District's website: http://northplainsgcd.org/aquifer-management-Rules/district-Rules/ and from the District's office.

Applications, Permits, and Registrations of Wells

The District requires all wells must be registered or have a test hole permit or well permit issued by the District prior to the construction of a well. District Rules require all newly permitted wells or modification to the original permit require a flow meter be installed on the permitted well and all other wells located within the water rights owner's groundwater production unit. Each permitted well must be fitted with a check valve to prevent aquifer contamination.

Classification, Spacing, and Density of Wells

The District allows a groundwater rights owner one well per 64 acres in a groundwater production unit. All new non-exempted wells are required to be spaced at least fifty yards away from an existing exempted well. All non-exempted wells are subjected to the following classification and spacing Rules:

Table 3: Classification, and Spacing Rules for all Non-Exempt Wells in the District.

Pumping Capacity (gallons per minute)	Classification	Minimum Distance from Nearest Permitted Well (Yards)	Minimum Distance from Property Line (Yards)
0 - 17	S	50	17
18 - 100	A	150	100
101 – 400	B	250	100
401 – 800	C	400	100
Greater than 801	D	500	100

Groundwater Production Units

An owner may join contiguous parcels of groundwater rights within the District's jurisdiction in one single unit of groundwater rights called a groundwater production unit (GPU). A GPU cannot contain more than 1,600 acres, and the most distant diagonal corners of the GPU cannot exceed 25,000 feet apart.

Allowable Annual Production, and Reporting

A groundwater user may pump up to 1.5 acre-feet of groundwater per acre of the GPU per year, termed allowable annual production. Additional production may be added from the owner's groundwater conservation reserve, up to 0.5 acre-feet of groundwater per acre of the GPU per year. An owner accumulates any unused allowable annual production in a groundwater conservation reserve program. If the reserve is not utilized within a five-year period, any accumulated reserve for that year is terminated. Annually, an owner will file a production report on all the owner's GPUs by March 1st immediately following the end of the calendar year. The District allows six different methods to measure groundwater production, flow meters, center pivot nozzle package, hour meter, CAFOs, natural gas consumption, and electric consumption. The District's preferred method for measuring groundwater production is flow meters.

Achieving Desired Future Conditions

To achieve the DFCs, the Board added Chapter 8 to the District's Rules. The allowable annual production limit will be reviewed if the average annual production in a management zone exceeds the average MAG amount for the first three years after the beginning of a GMA joint planning cycle. If the mean annual production did exceed the average MAG amounts, the Board may choose to lower the allowable annual production limit for a management zone based on the MAG data.

Waste of Groundwater

Chapter 9 in the District's Rules outline the District enforcement for the control and prevention of the waste of groundwater as defined by the Texas Water Code.

VI. General Geology and Hydrology

The Ogallala Aquifer is the primary groundwater source within the District. Water-bearing areas of the Ogallala formation are hydraulically connected except where the Canadian River has partly or wholly eroded through the formation to separate the North and South Plains. The Rita Blanca Aquifer in the western part of Dallam and Hartley Counties underlies the Ogallala Aquifer. The Dockum Aquifer in Dallam, Hartley, Moore and Sherman counties underlie the Rita Blanca where present and the Ogallala Aquifer. These aquifers are hydraulically connected.

Local Aquifers

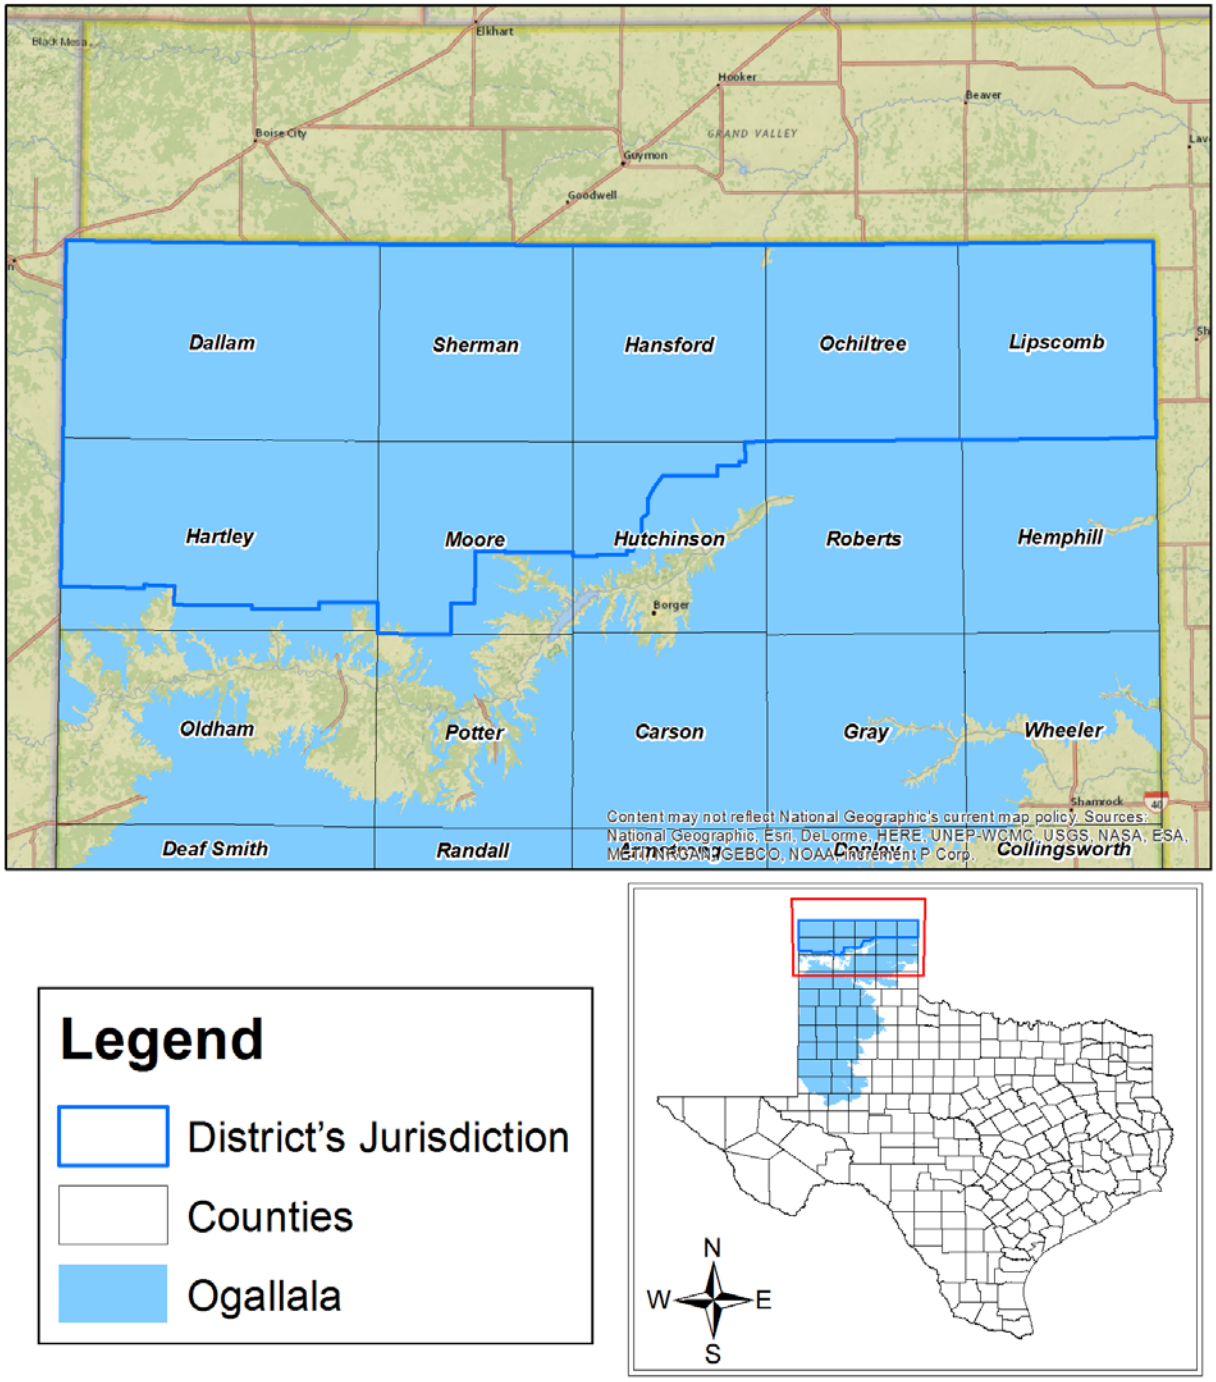

Figure 2: The Ogallala Aquifer.

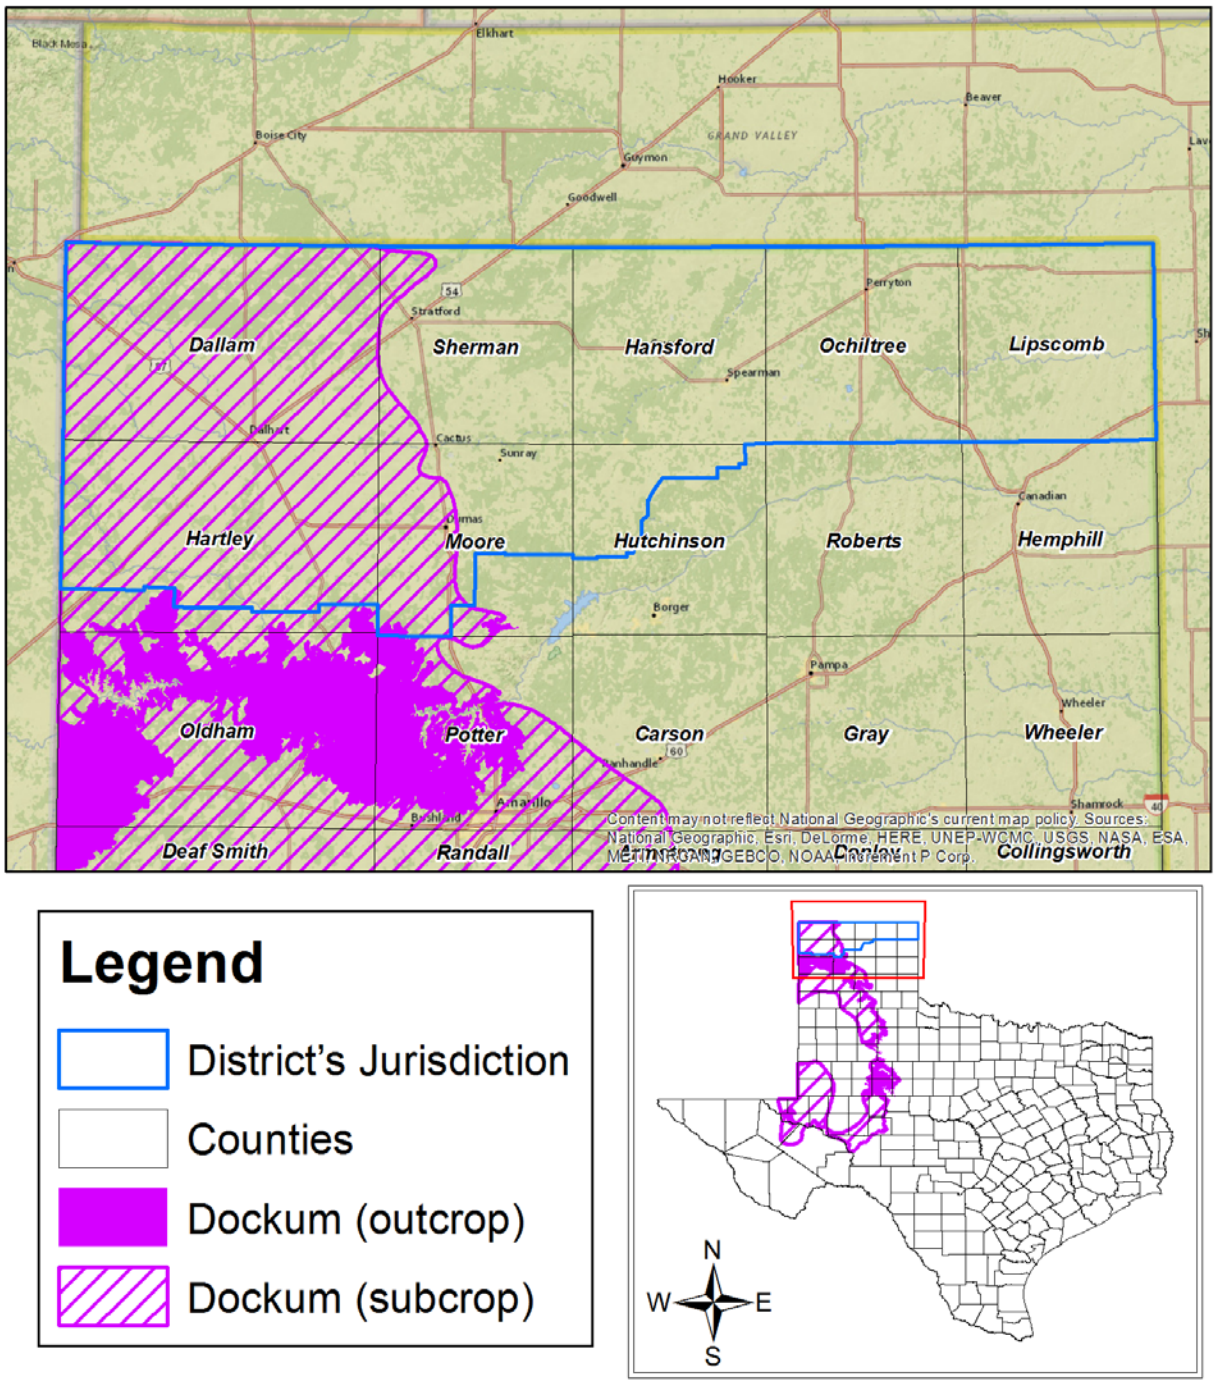

Note: Outcrop indicates portion of a water-bearing rock unit exposed at the land surface, and subcrop indicates portion of a water-bearing rock unit existing below other rock units.

Figure 3: The Dockum Aquifer.

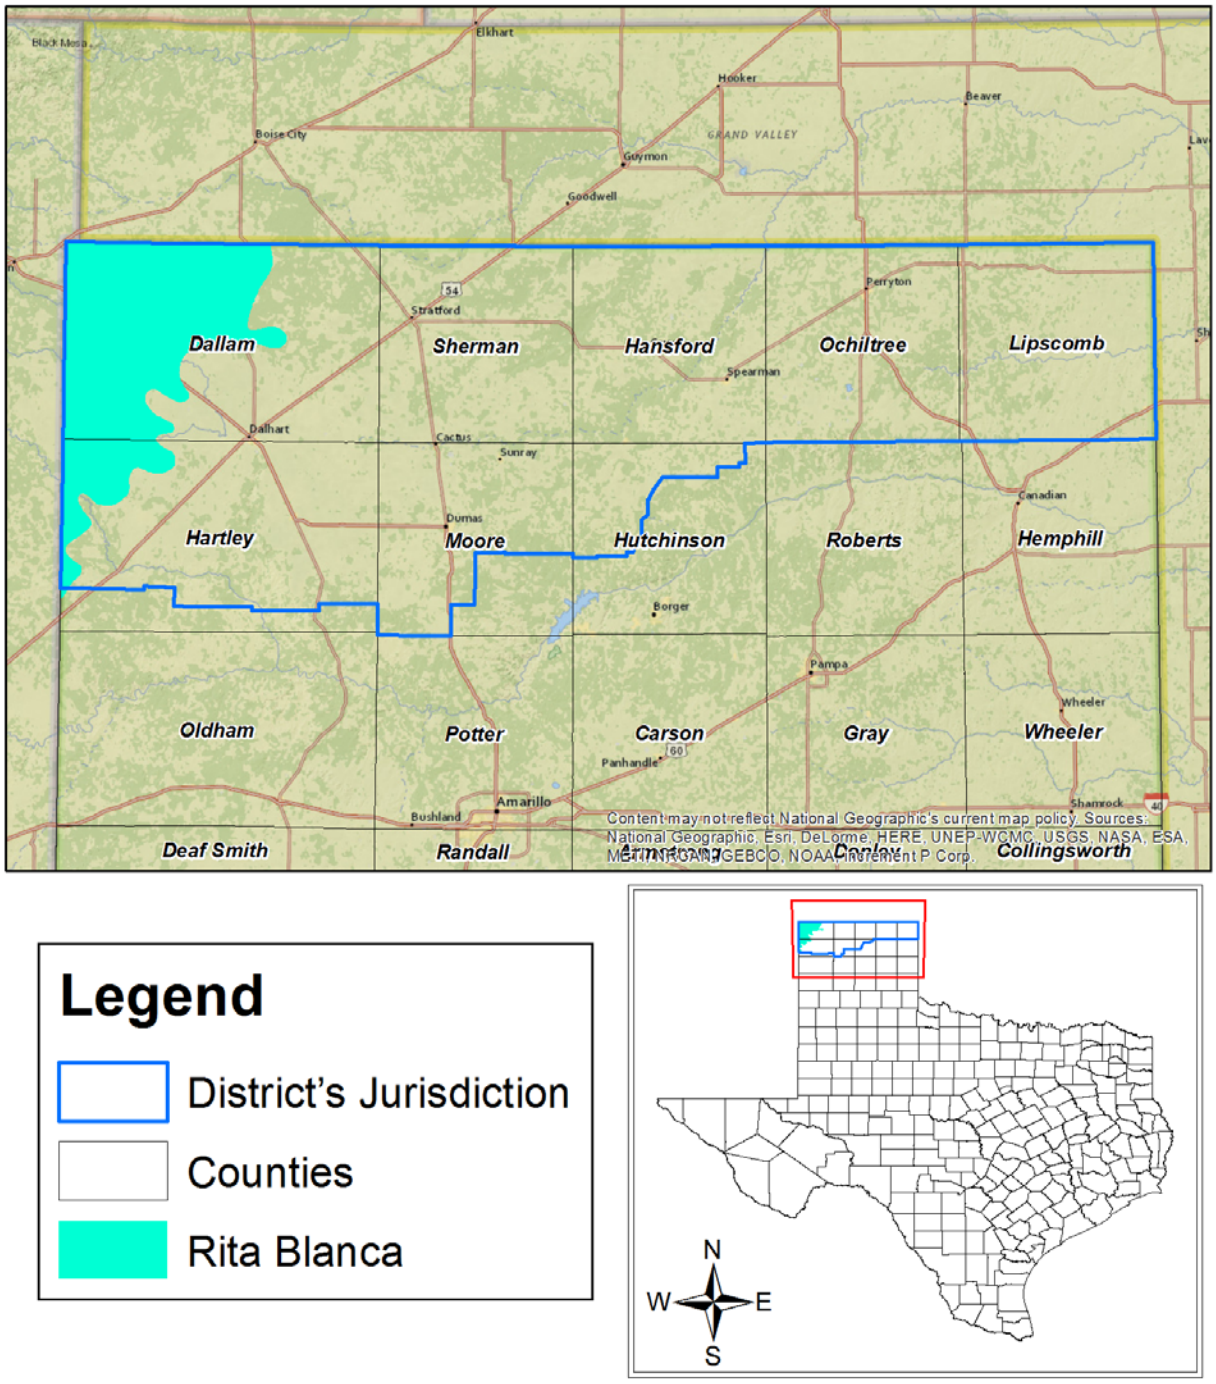

Figure 4: The Rita Blanca Aquifer.

VII. Available Groundwater and Projected Water Supply Needs

Modeled Available Groundwater [6, 7]

The District uses the groundwater availability modeling (GAM) along with information collected by the District and other resources during management planning. The TWDB's executive administrator provided the District with the data from the GAMs of the northern portion of the Ogallala Aquifer, which includes the Rita Blanca and Dockum Aquifers (TWDB GAM Run 16-029 MAG). The tables below are developed from the data provided.

Table 4: Modeled Available Groundwater in acre-feet for the Ogallala and Rita Blanca Aquifers [8].

County	2020	2030	2040	2050	2060	2062
Dallam	387,471	287,205	225,573	166,890	112,864	103,258
Hartley	397,585	271,523	212,321	154,433	100,407	90,842

Estimated Groundwater Use [9, 10, 11]

Over the last five years, groundwater withdrawals in the district averaged 1.7 million acre-feet per year. The eastern four counties' (Hansford, Hutchinson, Lipscomb, and Ochiltree) groundwater production averaged 399 thousand acre-feet per year; while the western four counties' (Dallam, Hartley, Moore, and Sherman) production averaged 1.3 million acre-feet per year. The east and west groundwater pumping averaged 23.5%, and 76.5%, respectively, of the total groundwater production. Table 6 summarizes the groundwater production for the District in acre-feet.

Table 6: Groundwater Production in acre-feet Collected through the District's Production Reporting Process.

County	2012	2013	2014	2015	2016	Average
Dallam	372,000	399,300	393,700	297,000	339,200	360,240
Hartley	458,700	459,000	442,100	332,700	391,600	416,820
Moore	234,700	228,300	210,000	156,700	185,700	203,080
Sherman	348,100	346,700	361,400	251,700	285,300	318,640
Hansford	218,800	202,000	211,700	148,800	170,400	190,340
Hutchinson	72,300	69,800	74,000	57,700	67,600	68,280
Lipscomb	55,600	42,600	48,800	39,400	42,300	45,740

Note: The data was averaged from 2000 through 2015. For more information on this data, see Appendix E.

Estimated Surface Water Use [12, 13]

According to the 2017 State Water Plan's estimates of each county associated with the District, the estimated historical surface water use amounts in acre-feet are as follows:

Table 9: Estimated Historical Surface Water Use in acre-feet

County	Municipal	Manufacturing	Mining	Irrigation	Livestock	Total
Dallam	0.0	0.0	0.0	140.3	1,284.1	1,424.3
Hartley	0.0	0.0	1.1	0.0	1,694.4	1,695.5
Moore	0.0	0.0	1.1	38.8	481.7	521.6
Sherman	0.0	0.0	0.9	0.0	656.9	657.8
Hansford	0.0	0.0	3.0	192.8	1,810.1	2,005.9
Hutchinson	176.1	422.0	7.8	115.5	75.1	796.6

Total	*176.1*	*422.0*	*69.8*	*488.6*	*7,237.4*	*8,393.9*

Note: The data was averaged from 2000 through 2015. For more information on this data, see Appendix E.

Estimated Annual Aquifer Recharge(Source TWDB GAM Run 17-008) [14, 15]

The total annual recharge for the Ogallala Aquifer is 137,029 acre-feet from precipitation within the District. The total annual recharge for the Dockum Aquifer is 49 acre-feet from precipitation within the District.

Table 10: Annual Aquifer Recharge in the District (in acre-feet) [16].

Aquifer	Recharge
Ogallala	137,029
Rita Blanca	0
Dockum	49
Total	137,078

Estimated Annual Aquifer Discharge to Springs, Lakes, Streams, and Rivers (Source TWDB GAM Run 17-008) [17, 18]

The total estimated annual volume of water that discharges from the Ogallala Aquifer to springs and any surface water body including lakes, streams, and rivers is 26,368 acre-feet. The Dockum and Rita Blanca Aquifer currently have no discharge to springs or any other surface water bodies.

Table 11: Annual Aquifer Discharge in the District (in acre-feet) [16].

Aquifer	Discharge
Ogallala	26,368
Rita Blanca	0
Dockum	0
Total	26,368

Estimated Aquifer Annual Flow Volume into and out of the District and Between Aquifers (Source TWDB GAM Run 17-008) [19, 20]

The estimated annual Ogallala Aquifer flow volume into and out of the District as well as the annual volume of flow between the Ogallala, Rita Blanca, and Dockum in the District is expressed in acre-feet as follows:

Table 12: Groundwater Flow in acre-feet for the Aquifers in the District [16].

Aquifer	Into the District	Out of the District	Between Aquifer
Ogallala	50,186	94,559	3,807[A]
Rita Blanca	902	229	3,464[B]
Dockum	4,097	2,293	1,997[C]

[A] Total flow from the Ogallala to the Rita Blanca and Dockum Aquifers.
[B] Total flow from the Ogallala and Dockum Aquifers into the Rita Blanca Aquifer.
[C] Total flow from the Dockum to the Ogallala and Rita Blanca Aquifers.

Projected Surface Water Supply [12, 13]

According to the 2017 State Water Plan's estimates of each county associated with the District, the projected surface water supply amounts in acre-feet are as follows:

Table 13: Projected Surface Water Supply in acre-feet for the East Management Zone

Years	Hansford	Hutchinson	Lipscomb	Ochiltree	Total
2020-2070	2,639	116	176	421	3,352

Note: For more information on this data, see Appendix E.

Table 14: Projected Surface Water Supply in acre-feet

Years	Dallam	Hartley	Moore	Sherman	Total
2020-2070	2,488	2,668	770	1,084	7,010

Note: For more information on this data, see Appendix E.

Projected Total Water Demand [21]

According to "Estimated Historical Groundwater Use And 2017 State Water Plan Datasets" the projected total water demand in acre-feet is as follows:

Table 15: Projected Water Demand in acre-feet for the District [21].

County	2020	2030	2040	2050	2060	2070
Dallam	376,493	354,620	326,399	291,512	256,648	221,798
Hartley	295,428	279,595	258,663	231,273	203,930	176,631
Moore	124,614	119,021	111,763	102,536	93,607	84,759
Sherman	225,104	212,287	195,370	174,359	153,357	132,400
Hansford	140,089	132,184	121,356	108,403	95,471	82,824
Hutchinson	25,198	25,028	24,496	23,677	23,117	22,617
Lipscomb	23,142	21,891	20,273	18,089	16,086	14,184
Ochiltree	65,358	61,562	57,102	51,612	46,367	41,271
Total	1,275,426	1,206,188	1,115,422	1,001,461	888,583	776,484

Table 16: Summarized Projected Water Demand in acre-feet for the West Management Zone. [21]

Use	2020	2030	2040	2,050	2060	2070

Table 17: Summarized Projected Water Demand in acre-feet for the East Management Zone. [21]

Use	2020	2030	2040	2050	2060	2070
Irrigation	224,368	210,821	193,397	171,908	150,420	128,931
Livestock	8,854	8,442	8,722	9,018	9,334	9,668
Manufacturing	7,943	8,406	8,848	9,233	9,879	10,645
Mining	2,555	2,586	1,603	646	77	17
Municipal	9,150	9,472	9,695	9,9802	10,300	10,645
Other	917	938	962	996	1,031	1,067
Total	253,787	240,665	223,227	201,781	181,041	160,896

Projected Water Supply Needs [22]

According to the 2017 State Water Plan, the estimated water supply needs in acre-feet are as follows:

Table 18: Estimated Water Supply Needs in acre-feet

County	2020	2030	2040	2050	2060	2070
Dallam	-79,908	-92,469	-95,342	-88,952	-79,729	-70,513
Hartley	-77,545	-93,712	-99,092	-93,227	-84,020	-74,803
Moore	-2,750	-4,376	-6,014	-8,940	-15,699	-20,761
Sherman	0	0	0	0	0	0
Hansford	0	0	-111	-479	-738	-978
Hutchinson	-167	-1,642	-3,066	-4,538	-5,834	-7,128
Lipscomb	0	0	-98	-326	-445	-558
Ochiltree	-478	-963	-1,440	-1,884	-2,352	-2,803
Total	-160,848	-193,162	-205,163	-198,346	-188,817	-177,544

Note: Negative numbers denote shortages the District is projected to experience unless Groundwater strategies are implemented. For more information on this data, see Appendix E.

VIII. Projected Water Management Strategies [22]

To meet the long-term water supply needs of the District, the 2017 State Water Plan recommends four water management strategies. Those management strategies and the county that they would be applicable to are as follows:

Table 19: Water Management Strategies [23].

Management Strategy	Dallam	Hansford	Hartley	Hutchinson	Lipscomb	Moore	Ochiltree	Sherman
Develop Groundwater Supply	✓	✓	✓	✓	✓	✓	✓	
Irrigation Conservation	✓	✓	✓	✓	✓	✓	✓	✓
Municipal Conservation	✓	✓	✓	✓	✓	✓	✓	✓
Water Audits and Leak Repair	✓	✓		✓		✓		✓
Weather Modification				✗				

Water Savings from Implementation of Management Strategies

According to the 2017 State Water Plan, if the above-listed management strategies are fully implemented, the water savings in acre-feet are as follows:

Table 20: Potential Water Savings in acre-feet if Management Strategies are Fully Implemented.

Management Strategy	2020	2030	2040	2050	2060	2070
Develop Groundwater Supply	10,285	12,000	13,785	22,192	23,073	24,160
Irrigation Conservation	113,063	203,034	355,380	402,316	437,791	463,479
Municipal Conservation	92	99	104	107	114	120
Water Audits and Leak Repair	361	400	437	478	517	557
Total	123,801	215,533	369,706	425,093	461,495	488,316

IX. Methodology to Track District Progress in Achieving Management Goals

The District staff will produce an annual report for the Board each year for providing information on the progress of District activities and programs. The report will specifically contain status updates on the management goals, objectives and standards as presented in this management plan. This report will be submitted to the Board in a timely manner, taking into consideration seasonal workloads and events, such as legislative sessions. The District will continue to enforce its Rules to conserve, preserve, protect, and prevent the waste of the groundwater resources under its jurisdiction. The Board periodically reviews the District's Rules and makes revisions as needed to manage the groundwater resources within the District under TWC Chapter 36. The Board will consider all groundwater uses and needs and will develop Rules which are fair and impartial to implement this management plan. A copy of the most current annual report and the current approved District Rules is available for public review on the District website at www.northplainsgcd.org and the District office.

X. Actions, Procedures, Performance, and Avoidance for District Implementation of Management Plan [24]

This management plan, as required by TWC Chapter 36, explains the goals, objectives and standards that will be used to conserve, protect and preserve the groundwater resources in the District. The District will implement and utilize the provisions of this management plan for determining the direction or priority for all District activities. District operations, all agreements entered by the District, and any additional planning efforts in which the District may participate will be consistent with the provisions of this plan. The District shall attempt to treat all citizens fairly. The District, as needed, shall seek the cooperation of state, regional, and local water management entities in the implementation of this plan and management of groundwater supplies within the District.

XI. Groundwater Management Goals

A. *Providing for the Most Efficient use of Groundwater* [25, 26]

1. *Groundwater Reporting*

Management Objective: Monitor total annual groundwater withdrawals through water use reporting by all producing groundwater right owners that have a well capable of producing more than 25,000 gallons of groundwater a day.

Performance Standards: Annually, the District will collect production reports on all properties containing non-exempt wells and calculate annual groundwater withdrawals for the District.

2. *Well Registrations and Permitting*

Management Objective: All exempt and non-exempt wells constructed within the jurisdiction of the District are required to be registered or permitted in accordance to the District's Rules.

Performance Standards: District staff will verify all wells within a Groundwater Production Unit(s) are registered or permitted in accordance with the District Rules during any site visits.

3. *Conservation Demonstration and Education*

Management Objective: Provide support through the District's North Plains Water Conservation Center, demonstrations, and other district education programs to promote groundwater conservation.

Performance Standards: At least annually, conduct field days and/or other events to educate stakeholders regarding water use efficiency technologies and practices. The District will publish reports on the activities at the North Plains Water Conservation Center and other demonstrations and education programs.

4. *Financial Assistance*

Management Objective: The District will encourage the adoption of technologies that promote efficient use of groundwater and conserve water by providing the means to purchase the technology.

Performance Standards: At least annually, the District will seek financial assistance for stakeholders regarding conservation equipment and practices.

5. *Technical Assistance*

Management Objective: The District will assist stakeholders in collecting information and knowledge about practices and technologies that promote efficient use of groundwater.

Performance Standards: The District will provide technical assistance to stakeholders when requested, and the information is beneficial for the efficient use of groundwater.

B. *Controlling and Preventing the Waste of Groundwater* [27, 28]

Management Objective: Control and prevent the waste of groundwater as defined by State law.

Performance Standards: The District will pursue any reported violations of the District's Rules concerning groundwater waste.

C. *Controlling and Preventing Subsidence* [29, 30]

Due to the depth of the water and the nature of the geology within the District, subsidence is unlikely and the District's Board of Directors, upon recommendation from qualified staff, have determined that this goal is not applicable to the District.

D. *Addressing Conjunctive Surface Water Management Issues* [31, 32]

Management Objective: Address conjunctive water use issues with organizations that have relevant authority or jurisdiction.

Performance Standard: Annually, District's representatives will attend at least 75% of Region A: Panhandle Regional Water Planning Group's meetings. To further address conjunctive water use issues, The District will submit a copy of its Management Plan to The Canadian River Municipal Water Authority, Palo Duro Water District, and Red River Authority for their consideration and review.

E. *Addressing Natural Resource Issues that Impact the Use and Availability of Groundwater and which are Impacted by the Use of Groundwater* [33, 34]

1. *Aquifer Monitoring*

Management Objective: Monitor aquifer characteristics that affect utilization and availability of groundwater and which are affected by the use of groundwater through District programs by maintaining a network of monitor wells.

Performance Standards:

i. District staff will periodically collect and analyze water samples from appropriate monitor wells.

ii. District staff will perform water quality analyses for select constituents for well owners upon request.
iii. Annually, District staff will summarize their water quality activities and make the information available to the Board and the public.
iv. District staff will collect aquifer water level measurements annually.
v. Annually, District staff will summarize groundwater level declines and average depth to water and make the information available to the Board and the public.
vi. At least on a two-year cycle, District staff will summarize or update aquifer saturated material information and make the information available to the Board and the public.

2. Deteriorated Wells

Management Objective: Investigate and address deteriorated wells that may pose a threat to water quality.

Performance Standard: District staff will pursue repair or plugging of deteriorated wells.

3. Aquifer Information

Management Objective: The District will provide easy access to public information available about the aquifers and wells within the District's jurisdiction.

Performance Standards: The District will maintain a web-based application for providing information about the groundwater resources in the region.

F. Addressing Drought Conditions [35, 36]

North Plains Groundwater Conservation District lies in an area of the state of Texas that has a year-round semi-arid climate. Semi-drought conditions are experienced year-round, and the District works to educate the public about methods to conserve water all year, but particularly during dry periods.

1. Current Drought Conditions

Management Objective: Provide information about the current drought conditions in the area.

Performance Standards: Maintain information about the current drought conditions on the District's website.

2. Conservation Education

Management Objective: Provide stakeholders with information and tools to conserve during dry and peak use periods.

Performance Standards: Annually, the District will conduct water conservation communications and education activities.

G. *Conservation, Recharge Enhancement, Rainwater Harvesting, Precipitation Enhancement, and Brush Control, Where Appropriate and Cost-Effective* [37, 38]

1. Conservation

a) Groundwater Conservation Reserve Program

Management Objective: Provide program allowing permitted well owners that timely report their groundwater production to retain any unused allowable annual production for future years, promoting the conservation of groundwater.

Performance Standards: Annually, District staff will report to permitted well owners the well owner's conservation reserve.

b) Conservation Education

Management Objective: Conduct conservation education activities to encourage water conservation and create informed and educated citizens who will be dedicated stewards of their resources.

Performance Standards: Annually, the District will disseminate groundwater conservation and waste prevention information through a variety of media, activities, and events.

c) Conservation Rule Compliance

Management Objective: Monitor and enforce compliance to District Rules

Performance Standards: The District staff will report the enforcement to the Board as needed.

2. Recharge Enhancement

The District has limited surface water resources to effectuate enhanced recharge through diversion or infiltration of surface water. The District explored recharge enhancement through its precipitation enhancement program, and the District discontinued funding for the program in 2006. The District could not quantify if, and to what extent, the program positively affected recharge or groundwater use in the District. The Board of Directors determined recharge enhancement through surface water diversion, infiltration, or precipitation enhancement is not currently viable or practical. For this management plan, this goal is not applicable to the District.

3. *Rainwater Harvesting*

Management Objective: The District promotes rainwater harvesting by maintaining rainwater harvesting information at the District Office and provides literature about its benefits at a public meeting held at least once annually.

Performance Standards: Annually District staff will report to the Board of Directors the number of people who attended the rainwater harvesting meetings.

4. *Precipitation Enhancement*

The District discontinued its funding for the precipitation enhancement program in 2006. The District could not quantify if, and to what extent, the program positively affected recharge or groundwater use. The Board of Directors determined that precipitation enhancement is not currently viable or practical. For this management plan, this goal is non-applicable to the District.

5. *Brush Control*

The District has a semi-arid climate, has very little surface water, experiences low annual rainfall and has a depth to groundwater exceeding 300 feet. Considering the District's low rainfall, depth to groundwater and lack of surface water resources; brush control as a form of recharge enhancement or groundwater conservation is not practicable or effective. The District has determined that brush control is not a viable groundwater conservation goal for this area and is therefore non-applicable.

H. *Addressing the Desired Future Conditions* [39, 40]

1. *Compare DFCs to Aquifers' Conditions*

Management Objective: Monitor the condition of the aquifers and status of groundwater production compared to the adopted DFCs.

Performance Standards: Annually review groundwater production information, GAMs, and water level measurements to characterize aquifer conditions compared to the DFCs.

2. *Joint Planning*

Management Objective: The District will participate in the joint planning process of the Groundwater Management Area 1 with other groundwater conservation districts.

Performance Standards: A District representative will participate in each GMA-1 joint planning meeting.

3. *Allowable Production Limitation*

Management Objective: Manage groundwater withdrawal amounts based on allowable production limits to achieve DFCs.

Performance Standards: The Board of Directors will review groundwater withdrawal amounts annually, and may modify annual allowable groundwater production limits consistent with its Rules to achieve the DFCs and preservation of the groundwater resurces in the region.

I. *Other Management Goals Included in The Plan by The District*

No other management goals are listed at this time.

XII. Appendix A: Board of Director's Resolution

BOARD RESOLUTION OF
NORTH PLAINS GROUNDWATER CONSERVATION DISTRICT
2018 REVISED GROUNDWATER MANAGEMENT PLAN

WHEREAS, Texas Water Code, Chapter 36, Section 36.1071 requires the North Plains Groundwater Conservation District ("the District") to develop a comprehensive management plan to address specific management goals; and,

WHEREAS, the District issued Notice of the 2018 Groundwater Management Plan Hearing that was held on February 13, 2018 at 9:00 a.m. on January 17, 2018 by posting the said Notice on the District's website and by publishing the said Notice in the *Amarillo Globe News* on January 21, 2018 and January 28, 2018, respectively; and,

WHEREAS, the District also gave notice of the District's intent to propose the adoption of the 2018 Revised Groundwater Management Plan at its March 13, 2018 regular Board Meeting; and,

WHEREAS, the District held a public hearing on February 13, 2018 to receive public comment regarding the proposed 2018 Revised Groundwater Management Plan that was transcribed by Court Reporter, Dana Moreland; and,

WHEREAS, no members of the public appeared on February 13, 2018 to offer public comment regarding the proposed 2018 Revised Groundwater Management Plan and no oral, or written, public comment has been received by the District as of March 13, 2018; and,

WHEREAS, Texas Water Code, Section 36.1071 also requires the District to identify the performance standards and management objectives under which the District will operate to achieve its management goals; and,

WHEREAS, the Board of Directors of the North Plains Groundwater Conservation District believes that the 2018 Revised Management Plan of the District reflects the best management of the groundwater for the District and meets the requirements of Section 36.1071 as applicable; and,

WHEREAS, the Board further believes that the description of activities, programs, and procedures of the District included in the Revised Management Plan provide performance standards and management goals and objectives necessary to affect the Revised Plan in accordance with Section 36.1071.

NOW, THEREFORE, BE IT RESOLVED, AND IT IS HEREBY RESOLVED, THAT the Board of Directors of the North Plains Groundwater

Conservation District does hereby adopt the 2018 North Plains Groundwater Conservation District Revised Management Plan on this 13th day of March, 2018.

Harold Grall, President

Bob B. Zimmer, Secretary

MARCH

From A13

The Rev. Nell Newton says a prayer for the Women's March on the steps of the Potter County Courthouse. (Photos by Neil Starkey / For the Amarillo Globe-News)

Marchers made their way from the Park to the lawn of Potter County Courthouse, where local women from community groups shared their stories of hope and struggle, including original poems and encouraging words.

Seeing the erosion of women's rights to have a say in their medical care brought physician Joanna Wilson out to march.

"The political and medical establishment is taking, slowly, women's rights away from them. It's scientific facts, not political. It's science … if I don't want to be a mother at that point, then I have the right not to be a mother at that point," she said.

"We need to allow our girls the opportunity to succeed and to teach them kindness and compassion and not require that they allow people to roll over them in order to be well-received," she said. "Women are still complacent. We still believe there's no value in fighting for equal pay because it's stacked against us. We still believe we have to be cosmetically very sexual, to present ourselves very sexual in order to be given any attention. We underestimate our ability as leaders and we doubt our ability to bring skills to the table."

Wilson also talked about the nature of women's aggression toward other women.

"As animals we compete with each other for resources and the need to support a community comes after our individual needs for success. Some of us are unable to make that transition to being able to support someone else even if that means they might do a better job at something than we do."

Katelynn Butler also acknowledged the lack of support some fail to provide other women.

"We've been trained systemically across genders, races, religions to not be as respectful as we can be and this is the beginning of a great shift," she said. "I think women contribute just as much (to the problem) and we can do just as much to change things as men can. I'm happy to see all genders out here, I've seen a few nonbinary as well, so that's beautiful."

Deborah Dale joins others heading from Ellwood Park to the Potter County Courthouse during the Women's March.

She added, "We're scared now that rights are being taken away again, whereas we were making progress. As much as I can do … to make change, I'm going to do it."

A woman's right to make her own choices regarding her health care was also on Kellie Kelley's mind as she marched.

"It's important to stand up for myself and stand up for others. It's important to stand up as women when we feel as though our rights aren't being protected. We need to protect our own rights," she said. "Planned Parenthood played a big part in my life when I was a teenager. If I hadn't had them in my life, I wouldn't have had the education and the protection and the health care I needed."

Kelley opted to carry her feline in a bag on her back as a symbol of solidarity with the movement.

"I'm more inclusive than divisive and she's a female, she kinda covers the P-word but in a fun way that isn't divisive. I have friends on both sides of the issue, and I'd like to keep it that way because that's where education begins."

"I want to represent the voice of not just women, but I'm a sixth-grade school teacher and I want to represent the voice of my students and the people around me," said Suzanne Nair. "The catalyst for the movement was really who's in office right now … and what's going on with #MeToo and #TimesUp. These aren't isolated incidents for women … all women encounter men who disregard their personal space."

Nair, who participated in Austin's march last year, said she wants to make a better life for everyone and hopes her daughters in college will be able to realize the benefits of these movements.

"There's still a struggle in the workplace. Before I became a teacher, I was in an office environment where men didn't realize boundaries either in talking or their actions."

"Growing up, I was told I was meant to be here to make men's lives easier and I don't believe in that. I think I have the right to live my life as I see fit even though I was born biologically a woman," said Abbie Fred.

Fred was standing up for equality for both races and genders as she participated in the march for the second time.

"Though I don't generally conform to the normal gender binary, I think it's important for us to be able to stand up for our rights … against people who want to put us down," Fred said. "For example, black women in general are so low on the totem poll, they don't get enough rights and it pisses me off."

Marches for women's rights slam Trump, encourage voting

The Associated Press

LOS ANGELES — Demonstrators from Los Angeles to New York marched in support of female empowerment and denounced President Donald Trump's views on immigration, abortion, LGBT rights and women's rights on Saturday, the anniversary of his inauguration.

People marched in Casper, Wyo., and Cambridge, Mass., and in Sioux Falls, S.D., and Houston. In Park City, Utah, where the annual Sundance Film Festival is in full swing, actress Jane Fonda and nationally known attorney Gloria Allred joined the women's march.

In Morristown, N.J., that state's new first lady told a crowd she was a victim of sexual violence while attending college.

Tammy Murphy, the wife of Democrat Phil Murphy, said the attack occurred while she was a sophomore at the University of Virginia. She said she was walking along a path when a man grabbed her and pulled her into some bushes. She said the man tried to take her clothes off and put a crab apple in her mouth to silence her but she bit his hand and fled half-dressed to a nearby fraternity house, where students called police.

In Los Angeles, Eva Longoria, Natalie Portman, Viola Davis, Alfre Woodard, Scarlett Johansson, Constance Wu, Adam Scott and Rob Reiner were among the celebrities who addressed a crowd of hundreds of thousands of demonstrators.

Longoria, who starred in TV's "Desperate Housewives," told marchers their presence matters, "especially when those in power seem to have turned their backs on reason and justice."

Portman, an Academy Award winner, talked about feeling sexualized by the entertainment industry from the time her first film, "Leon: The Professional," was released when she was 13 and suggested it's time for "a revolution of desire." In the 1994 film, Portman played a young girl taken in by a hit man after her family is killed.

Woodard urged everyone to register and vote, saying, "the 2018 midterms start now." And Davis spoke with the passion of a preacher as she discussed the nation's history of discrimination and her past as a sexual assault survivor.

The 2017 rally in Washington, D.C., and hundreds of similar marches created solidarity for those opposing Trump's views, words and actions. Millions of people around the world marched during last year's rallies, and many on Saturday talked about the news avalanche of politics and gender issues in the past year.

Critics of the weekend's marches said the demonstrations were really a protest against Trump. More rallies were planned at other cities on Sunday.

Meanwhile, Trump on Saturday tweeted that it was a "perfect day" for women to march to celebrate the "economic success and wealth creation" that's happened during his first year in office.

NORTH PLAINS GROUNDWATER CONSERVATION DISTRICT'S NOTICE OF PUBLIC HEARING FOR THE PURPOSE OF ADOPTING REVISED MANAGEMENT PLAN

TO: ALL INTERESTED PERSONS.

[illegible]

Date, Time, and Place of Public Hearing.

[illegible]

Procedures for Submitting Public Comments on the Revised Management Plan.

A. Oral Comments

[illegible]

1. the number of times a person may speak;
2. the time period for oral comments;
3. [illegible] repetitious comments;
4. [illegible]
5. the time period for asking or responding to questions; and
6. other matters that come to the attention of the presiding officer as requiring limitation.

B. Written Comments

[illegible]

C. Response to Comments

[illegible]

Procedure for Obtaining the Revised Management Plan.

Copies of the proposed Management Plan may be obtained from the District by:

SUMMARY OF REVISIONS TO THE DISTRICT'S MANAGEMENT PLAN

XIV. Appendix C: Transcript of Public Hearings

PUBLIC HEARING - February 13, 2018

BEFORE THE NORTH PLAINS GROUNDWATER

CONSERVATION DISTRICT

PUBLIC HEARING

On the 13th day of February, 2018, the following Public Hearing came on to be held before the North Plains Groundwater Conservation District Board in the conference room at the Richard S. Bowers Water Conservation Learning Center Building North Plains Water Conservation Center 6045 West County Road E. Dumas, Moore County, Texas.

Proceedings reported by computerized stenotype machine in accordance with Chapter 36.1071 of the Texas Water Code.

North Plains Groundwater Conservation District Proposed Revised Management Plan

AMARILLO COURT REPORTING
806-374-4091

PUBLIC HEARING

MR. KRIENKE: At this time I want to recess our regular meeting and open a Public Hearing to receive public comment regarding North Plains Groundwater Conservation District Proposed Revised Management Plan.

I'll turn it over to legal counsel, Keith Good.

MR. GOOD: For the record, we have Dana Moreland who is our court reporter today serving with us.

My name is Keith Good. I serve as General Counsel for the North Plains Groundwater Conservation District. It is my pleasure in that capacity this morning to serve as the presiding officer of this hearing.

This is a formal hearing required of Chapter 36.1071 of the Water Code. The District has developed and proposed a management plan. I have it here with me. It has submitted that plan to Texas Water Development Board for review and comment. Those comments have been received. The Proposed Management Plan has been modified accordingly.

If you wish to comment, if you would please stand and state your name and make your comments. The comments will be reported, as I said, by Dana Moreland who is the court reporter present here today.

District staff will make a brief

presentation regarding the Proposed Management Plan.

Thereafter, this hearing is opened for public comments on the Proposed Management Plan.

MR. KRIENKE: Thank you. The General Manager, Steve Walthour, will make some comments.

MR. WALTHOUR: For the record, my name is Walthour; I'm the general manager of North Plains Groundwater Conservation District. The staff has been working on this plan for over six months now. Dale Hallmark, Assistant General Manager of my staff, will provide a short presentation of what's in the plan for the public and the Board to hear.

You've been provided copies of the electronic, and they are also located on our website. And we have hard copies for anyone who would like a hard copy today.

With that, I would like to turn it over to Dale Hallmark.

MR. HALLMARK: My name is Dale Hallmark. I'm a licensed PT. I'm an assistant general manager of the North Plains Groundwater Conservation District. I'd like to provide a brief summary of our Management Plan.

And like Steve mentioned, I have hard copies if anybody would like one. This won't take very long, but maybe you want to follow along.

I would like to start off with a schedule of events. After this February 13 Board Meeting to Receive Public Comment, we will distribute the proposed plan to C-R-M-W-A, CRMWA, which is Canadian River Municipal Water Authority. We will distribute it to Palo Duro Water District, Red River Water Authority, High Plains Groundwater Conservation District, Hemphill Underground Water Conservation District, and Panhandle Water Conservation District and receive possible comments from them.

We would like to receive public comments until March 12, which precedes the next Board meeting.

March 13, as in the Board notice, is the date for the next board meeting, and at that time they would consider public comments and possibly adopt the Management Plan.

We have until April 30th to submit the Management Plan to the Texas Water Development Board for final official review and approval.

As we consider the Management Plan, it basically falls into two main categories. The first half of it is background information, and necessary information, but background information. We cover that fairly quickly.

The second half, starting with Section X,

is where we actually get into actions and procedures that we will follow.

So just do a quick review of the first part. It starts off Section I is the District Mission Statement.

Section II provides the purpose of the Management Plan.

And Section III outlines the criteria for plan certification, the proposal, the public hearings, plan adoption, and coordination with surface management entities.

Section IV gives background information on the District, its creation, its location and extent, provides maps, and it provides background on the District. It provides a background of our authority and discusses groundwater management area joint planning and desired future conditions, Dockum Aquifer desired future conditions and Ogallala Aquifer desired future conditions.

Section V deals with the District rules and management of groundwater.

And Section VI introduces the general geology and hydrology of this area.

Section VII talks about available groundwater, projected water supply needs, modeled available groundwater, estimated groundwater usage, and

estimated surface water usage.

There is a section starting on page 21 that talks about estimated annual aquifer recharge to springs, lakes, streams, rivers, interflow within the aquifers, projected surface water supplies, groundwater supplies, and projected total water demand of this area, and our estimated water supply needs.

Section VIII deals with projected water management strategies, and it deals with potential water savings from implementation of management strategies.

Section IX deals with the methodology to track the district progress in achieving its management goals.

Section X is where we actually get into the programs, procedures and what we do, and then it actually -- goes slightly more detailed into that.

It looks like I may have left out a section. I should have made this font a little bit larger.

Section X is action, procedure, performance, and avoidance for District implementation of management plan.

Section XI starts actual programs and processes. It starts with the groundwater management goals. Under those goals, we address 9 or 10 major

sections or activities.

The first one is providing for the most efficient use of groundwater, which is one that's required by law to be addressed. The first section under is groundwater reporting, and we have people report their groundwater production each year, and that's how we address -- that's how we address that one.

Another way we address providing the most efficient use of ground wear is through well registration and permitting, and we address that through our permitting process.

A third method is conservation demonstration and education. That is addressed predominantly through our conservation center here, our field days and other activities at the conservation center here.

Another section deals with financial assistance, and that is our meter program and our grant program for efficient use of management technologies and through our programs that we put on through the conservation center.

Technical assistance is another area that we address. We provide technical assistance to area producers. That is addressed through our conservation center here. We also provide VFD, variable frequency

drive, testing on the area producers.

Another major area, I guess this would be Section B, controlling and preventing the waste of groundwater. We do that by investigating any waste of water complaint that comes into our office, plus we have multiple field employees that are out in the field day in and day out, and they report any waste of water that they observe, and we investigate it and take appropriate action.

Section C addresses controlling and preventing subsidence. We have examined the geology of this area and determined that this particular issue is not very applicable to this district and that determining the -- what do you call it -- determining one of these requirements as nonapplicable is an acceptable answer, as far as the Texas Water Development Board is concerned.

Section D, addressing conjunctive surface water management issues. We do that through our participating in joint planning. We also provide Red River, Palo Duro, and CRMWA, Canadian River Municipal Water Authority, copies of our management plan. And some of them we deal with again, as well, in regional planning; that's how we address that.

Section E, addressing natural resource issues that impact the use and availability of groundwater

and which are impacted by the use of groundwater. We do that predominantly through our monitor well program where we monitor what is happening with the programs.

Yes, sir?

MR. KRIENKE: Dale, you've mentioned twice now CRMWA saying "Colorado"; don't you really mean "Canadian River"?

MR. HALLMARK: Yes, I do. I apologize for that.

MR. KRIENKE: You might want to make that correction in the record. (Corrections made to official transcript.)

MR. HALLMARK: Section E, addressing natural resource issues that impact the use and availability of groundwater and which are impacted by the use of groundwater. We address that through monitor wells; we measure wells each year.

We create maps that show the impact on the aquifer. We create depth to water maps, saturated material maps, decline maps, and those are available online and in our office, available to the public.

Under that same section, we also address deteriorated wells. We investigate all complaints of deteriorated wells, and our field staff are in the field and anything they discover that's wrong with a well, we

follow through with that and see that it's corrected.

We also address, under Section F, drought conditions. And the main way we do that is through our regional planning, and we provide information at the District, and, I believe, on our website.

Section G, where we address conservation, recharge enhancement, rainwater harvesting, precipitation enhancement, brush control where it is appropriate and cost-effective.

Considering a groundwater conservation reserve program; that is one way we address the conservation aspect of that section.

We also have a very active conservation education program. A lot of that is through our conservation center, but there are also educational activities with the schools and the general public.

We also have conservation rules in our rules, and we address those per our District Rules and by enforcing them.

Recharge enhancement. There are multiple ways that you can enhance recharge, but considering the geology of this area, the usage of the groundwater, and the climate that we work under, that has been determined to be not viable or effective at this particular time.

We address rainwater harvesting. And we

have determined that as not applicable to this area. While there's no doubt that rainfall harvesting is a viable process, we use water at such a scale that, for agriculture, it's not applicable.

Precipitation enhancement is another area that we examined and addressed, and we determined that one, as well, as not being applicable or effective to this area. I have no doubt that rainfall enhancement or precipitation enhancement works, and we have proof that it works. We do not have proof that it actually conserves groundwater.

Brush control, another issue that we discuss has been determined that it's not applicable or practical for this district. In our -- brush control works best in enhancing the surface water flow in rivers and recharging shallow aquifers. We don't have much precipitation here, and most of the time our aquifer is very deep and the geology makes this one not very effective for groundwater in this area.

Getting towards the last, Section H, which is the area in the management plan where we address desired future conditions, and we compare the desired future conditions to the actual aquifer conditions. That is done in the hydrology report and our -- it's also addressed in our annual report.

Joint planning is an issue we address. We predominantly participate in joint planning through the GMA-1 process, regional planning process, and we share our management plan document with various other water entities in this area.

Also, in conjunction with DFCs, we have an allowable production limitation, which is a tool that allows us to meet our DFCs, and that is addressed through our rules.

There are no other particular management plans or strategies at this time that we are using. We may in the future.

Almost all of these procedures, reports and activities that we are involved in are given as reports to the Board throughout the year. It is included in our annual report. It is also -- certain information is included in our financial report done by Coy Barton. We also supply to the Board and the public our hydrology report and maintain an on-site -- online website.

Our public relations education deals with social media, publications and education. And in recent year, a big aspect of how we meet our management plan goals is through our conservation center here.

That's all I have written to cover, but we can certainly discuss any of these issues or answer

questions if anybody has anything they wish to say or add. That's all I have.

MR. WALTHOUR: Thank you, Dale. This is Steve Walthour, for the record. In doing a groundwater management plan or district management plan, we're required to do this by law. As you recall, back in 2007, we had to actually get caught up on our management plan, because we were ten years behind, and we have stayed current ever since.

When you read through the management plan, the first thing that pops into your mind is, well, there's nothing in here that says plans we're actually going to do in the future. We have found that this management plan essentially talks about what we're doing now and how things work.

When we put stuff in management plans and say we're going to do something new or different in the future, and then we don't do it, we get nailed by the State for not doing it because it was in our plan.

We tried to keep this fairly general. One of the biggest things that we've added to this is our demonstration projects. The last time we really considered this, we were not doing demonstrations on the level that we're doing today. We did not have the field back in our control, and we did not -- we had started

doing demonstrations, but we had not added them to the plan. That's the biggest thing that I see that we've added.

Also, the other issue is under desired future conditions. The Board implemented a set of rules several years ago to address desired future conditions in the future, and we wrote those DFCs into this plan. There are two primary issues.

The annual report that Dale mentioned is a method that we report to you and to the public on those things that are part of the plan so that we can keep a record, and we have that record for the next time that we're audited, either by the State or by the District's own auditor. We have two opportunities to be audited. We can be audited through the Texas Commission on Environmental Quality, and we can also be audited through the State, I believe, comptroller's office. I believe that's correct.

That's really all I have to say, as far as comments. If you have any additional comments or any changes that you would like to make, please contact the District or the staff and provide those.

We will take written comment via email or through the post office through March 12th. The Board meeting is on the 13th. If there's anything that is

brought forth that we believe -- whatever is brought forth, as far as public comments concerns of that nature we'll bring it to you to the March meeting.

We anticipate you adopting this on March 13th; however, if we need more time to do that, then we can certainly do that.

That's all I have to say, and that concludes our testimony. Thank you.

MR. GOOD: Thank you. Are there any members of the public speaking?

Note for the record there are no members of the public.

Any directors, that wish to comment?

MR. KRIENKE: What is your recommendation, Keith, do we leave it open 5 minutes or 10 minutes, yet?

MR. GOOD: We certainly can do that, if you want to take a break, see if any members of the public appear.

MR. KRIENKE: Let's take a short break. We'll leave the hearing open until after we get back from the break.

(Break.)

MR. KRIENKE: Does any Board member or anyone of the public have any comments at this time?

MR. GOOD: We can close the hearing.

MR. KRIENKE: At this time we'll adjourn the hearing -- close the hearing and reconvene our regular Board meting.

(Public Hearing Closed.)

CERTIFICATION

I, Dana Foster Moreland, Certified Shorthand Reporter in and for the State of Texas, do hereby certify that the above and foregoing contains a true and correct transcription of the Public Hearing of the North Plains Groundwater Conservation District held on February 13, 2018, that the record remained open for written comment, and as of 5:01 p.m. March 12, 2018, no additional written comments had been received.

Certified to by me on this 20th day of March, 2018

The North Plains Groundwater Conservation District Board proposed to the public (February 13, 2018) for comment a REVISED Management Plan.
The Texas Water Development Board has suggested that CRMWA receive by email a copy of our Management Plan.
Specifically to receive any comments as well as address any potential Conjunctive water use issues.

We will receive Public comment until March 12, 2018.
The Board of Directors will meet March 13, 2018 to review public comment and possibly adopt the revised Management Plan.

I appreciate any comments you care to make or anyone else's at CRMWA.

We (North Plains Groundwater Conservation District) recently (February 13, 2018) proposed to the public for comment a REVISED Management Plan.
The Texas Water Development Board has suggested that since the Red River Authority shares areas in our jurisdiction that
It would be advisable to email a copy of our Management Plan to the RRA. Specifically to receive any comments as well as address
any potential Conjunctive water use issues.

We will receive Public comment until March 12, 2018.
The Board of Directors will meet March 13, 2018 to review public comment and possibly adopt the revised management Plan.

Any comments or concerns are welcome.

Appendices are not included to keep the file size as small as possible.
If you need them I can send them or send the entire document by regular mail.

XVI. Appendix E: Management Plan Required Data Report for the District

Estimated Historical Groundwater Use And 2017 State Water Plan Datasets:

North Plains Groundwater Conservation District

by Stephen Allen

Texas Water Development Board

Groundwater Division

Groundwater Technical Assistance Section

stephen.allen@twdb.texas.gov

(512) 463-7317

October 25, 2017

GROUNDWATER MANAGEMENT PLAN DATA:

This package of water data reports (part 1 of a 2-part package of information) is being provided to groundwater conservation districts to help them meet the requirements for approval of their five-year groundwater management plan. Each report in the package addresses a specific numbered requirement in the Texas Water Development Board's groundwater management plan checklist. The checklist can be viewed and downloaded from this web address:

http://www.twdb.texas.gov/groundwater/docs/GCD/GMPChecklist0113.pdf

The five reports included in this part are:

1. Estimated Historical Groundwater Use (checklist item 2)

   from the TWDB Historical Water Use Survey (WUS)

2. Projected Surface Water Supplies (checklist item 6)

3. Projected Water Demands (checklist item 7)

4. Projected Water Supply Needs (checklist item 8)

5. Projected Water Management Strategies (checklist item 9)

from the 2017 Texas State Water Plan (SWP)

Part 2 of the 2-part package is the groundwater availability model (GAM) report for the District (checklist items 3 through 5). The District should have received, or will receive, this report from the Groundwater Availability Modeling Section. Questions about the GAM can be directed to Dr. Shirley Wade, shirley.wade@twdb.texas.gov, (512) 936-0883.

DISCLAIMER:

The data presented in this report represents the most up-to-date WUS and 2017 SWP data available as of 10/25/2017. Although it does not happen frequently, either of these datasets are subject to change pending the availability of more accurate WUS data or an amendment to the 2017 SWP. District personnel must review these datasets and correct any discrepancies in order to ensure approval of their groundwater management plan.

The WUS dataset can be verified at this web address:

http://www.twdb.texas.gov/waterplanning/waterusesurvey/estimates/

The 2017 SWP dataset can be verified by contacting Sabrina Anderson (sabrina.anderson@twdb.texas.gov or 512-936-0886).

The values presented in the data tables of this report are county-based. In cases where groundwater conservation districts cover only a portion of one or more counties the data values are modified with an apportioning multiplier to create new values that more accurately represent conditions within district boundaries. The multiplier used in the following formula is a land area ratio: (data value * (land area of district in county / land area of county)). For two of the four SWP tables (Projected Surface Water Supplies and Projected Water Demands) only the county-wide water user group (WUG) data values (county other, manufacturing, steam electric power, irrigation, mining and livestock) are modified using the multiplier. WUG values for municipalities, water supply corporations, and utility districts are not apportioned; instead, their full values are retained when they are located within the district, and eliminated when they are located outside (we ask each district to identify these entity locations).

The remaining SWP tables (Projected Water Supply Needs and Projected Water Management Strategies) are not modified because district-specific values are not statutorily required. Each district needs only "consider" the county values in these tables.

In the WUS table every category of water use (including municipal) is apportioned. Staff determined that breaking down the annual municipal values into individual WUGs was too complex.

TWDB recognizes that the apportioning formula used is not perfect but it is the best available process with respect to time and staffing constraints. If a district believes it has data that is more accurate it can add those data to the plan with an explanation of how the data were derived. Apportioning percentages that the TWDB used are listed above each applicable table.

For additional questions regarding this data, please contact Stephen Allen (stephen.allen@twdb.texas.gov or 512-463-7317) or Rima Petrossian (rima.petrossian@twdb.texas.gov or 512-936-2420).

Estimated Historical Water Use

TWDB Historical Water Use Survey (WUS) Data

Groundwater and surface water historical use estimates are currently unavailable for calendar year 2016. TWDB staff anticipates the calculation and posting of these estimates at a later date.

DALLAM COUNTY *100% (multiplier)* All values are in acre-feet

Year	Source	Municipal	Manufacturing	Mining	Steam Electric	Irrigation	Livestock	Total
