

**Groundwater Management Area 12
Desired Future Conditions**

Aquifer	Desired Future Condition Summary	Date Desired Future Condition Adopted
Brazos River Alluvium	Milan County: a decrease of 5 feet in average saturated thickness from 2010 to 2060. The baseline thickness for 2010 is estimated at 24.5 feet; Burleson County: a decrease of 6 feet in average saturated thickness from 2010 to 2060. The baseline thickness for 2010 is estimated at 38.5 feet. Not relevant in Brazos Valley GCD.	8/11/2010
Calvert Bluff (Upper Wilcox)	Average drawdown between January 2000 and December 2059: Brazos Valley Groundwater Conservation District: 106 feet; Lost Pines Groundwater Conservation District: 99 feet; Mid-East Texas Groundwater Conservation District: 70 feet; Post Oak Savannah Groundwater Conservation District: 140 feet; Limestone County: 9 feet, Navarro County: 0 feet, Williamson County: 10 foot water level rise.	8/11/2010
Carrizo	Average drawdown between January 2000 and December 2059: Brazos Valley Groundwater Conservation District: 47 feet; Fayette County Groundwater Conservation District: 60 feet; Lost Pines Groundwater Conservation District: 47 feet; Mid-East Texas Groundwater Conservation District: 55 feet; Post Oak Savannah Groundwater Conservation District: 65 feet.	8/11/2010
Hooper (Lower Wilcox)	Average drawdown between January 2000 and December 2059: Brazos Valley Groundwater Conservation District: 170 feet; Lost Pines Groundwater Conservation District: 129 feet; Mid-East Texas Groundwater Conservation District: 95 feet; Post Oak Savannah Groundwater Conservation District: 180 feet; Falls County: 20 feet, Limestone County: 40 feet, Navarro County: 1 foot, Williamson County: 50 feet.	8/11/2010
Queen City	Average drawdown between January 2000 and December 2059: Brazos Valley Groundwater Conservation District: 12 feet; Fayette County Groundwater Conservation District: 60 feet; Lost Pines Groundwater Conservation District: 13 feet; Mid-East Texas Groundwater Conservation District: 0 feet; Post Oak Savannah Groundwater Conservation District: 30 feet.	8/11/2010
Simsboro (Middle Wilcox)	Average drawdown between January 2000 and December 2059: Brazos Valley Groundwater Conservation District: 270 feet; Lost Pines Groundwater Conservation District: 237 feet; Mid-East Texas Groundwater Conservation District: 115 feet; Post Oak Savannah Groundwater Conservation District: 300 feet; Falls County: 0 feet, Limestone County: 43 feet, Navarro County: 1 foot, Williamson County: 55 feet.	8/11/2010
Sparta	Average drawdown between January 2000 and December 2059: Brazos Valley Groundwater Conservation District: 15 feet; Fayette County Groundwater Conservation District: 60 feet; Lost Pines Groundwater Conservation District: 7 feet; Mid-East Texas Groundwater Conservation District: 0 feet; Post Oak Savannah Groundwater Conservation District: 30 feet.	8/11/2010
Yegua-Jackson	Average drawdown from January 2010 to January 2060: Brazos Valley Groundwater Conservation District: 70 feet for the Yegua, 110 feet for the Jackson; Fayette County Groundwater Conservation District: 75 feet for the Yegua-Jackson; Post Oak Savannah Groundwater Conservation District: 100 feet for the Yegua-Jackson; Mid-East Texas Groundwater Conservation District: from January 2000 to January 2060, 5 feet for the Yegua-Jackson. Not relevant in Lost Pines Groundwater Conservation District.	6/30/2011
