RECORDS OF WATER-LEVEL MEASUREMENTS IN MARTIN COUNTY, TEXAS

Compiled by

C. R. Follett, Engineer

Texas Board of Water Engineers

April 1954

This bulletin contains measurements of the depth-to-water below land-surface datum in 57 wells in Martin County, Texas. It is one of a series of publications which contain measurements of the water levels in selected observation wells.

In 1936 an inventory of water wells in Martin County, including depth-to-water measurements, was made cooperatively by the United States Geological Survey, the Texas Board of Water Engineers and the Work Project Administration. Observation wells selected in 1937 for water-level measurements were measured periodically through 1941. In 1951 measurements were resumed in some of these wells and additional observation wells were selected in the area of irrigation development. These measurements have been made as a part of a cooperative program of ground water investigations by the Geological Survey and the Texas Board of Water Engineers.

The accompanying map shows the location of the observation wells with the numbers assigned to them in the records. Hydrographs showing the fluctuations of the water level in two wells and the annual precipitation at Big Spring are shown on page 13. Records of water wells and geologic data are given in the following list of publications.
