Executive Summary

After the Texas Water Development Board (TWDB) finalized population and water demand projections to be used in the preparation of the 2006 Brazos G and Region C Regional Water Plans, the North Texas Central Council of Government (NCTCOG) released population projections for the North Texas area which showed higher growth rates in several North Texas counties than previously estimated. Recent population estimates show that some North Texas counties are growing faster than projected in the regional plans but not as fast as projected by NCTCOG. There has been substantial migration to suburban communities proximate to the Dallas-Fort Worth metropolitan area, which presents ever-changing population and water demand projections for the area. As growth in these more rural areas continues, local water supplies become more limited and regional water solutions become more attractive as options.

The Region C Regional Water Planning Group (Region C) and the Brazos G Regional Water Planning Group (Brazos G) have completed a study (Four County Study) that considers population and water demand growth for Ellis, Johnson, Southern Dallas, and Southern Tarrant Counties for the area shown in Figure ES-1. Based on the majority of the project area residing in Region C, Region C is preparing and submitting the report to guide the development of the 2011 Region C and Brazos G Plans with assistance from Brazos G specifically related to Johnson County entities located in the Brazos G Area. The purpose of this study is to review recent growth in the study area, make adjustments to population and demand projections to account for growth, and update the current and future water plans of the water user groups and wholesale water providers in the study area. This study included conducting meetings and compiling survey data provided by water suppliers regarding their current and future water plans, determining revisions to population and demand projections, and developing a water supply plan for the study This report describes the assistance provided by Brazos G to the study effort, and summarizes the information resulting from the study that is pertinent to the Brazos G Area. Those reading this summary should also consult the "Region C Water Supply Study for Ellis County, Johnson County, Southern Dallas County, and Southern Tarrant County," which provides the full report and results of the Four County study.

¹ Region C, Draft Water Supply Study for Ellis County, Johnson County, Southern Dallas County, and Southern Tarrant County, October 2008.

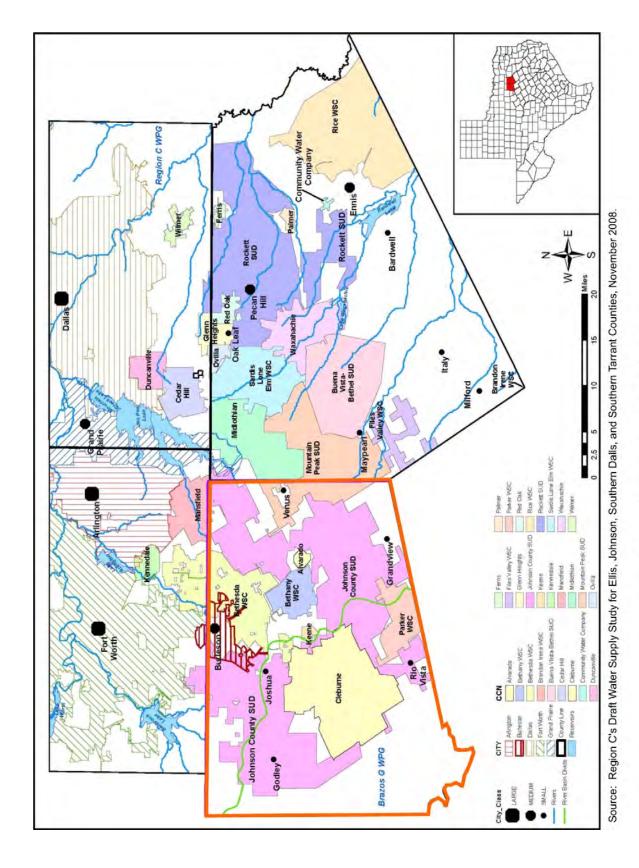

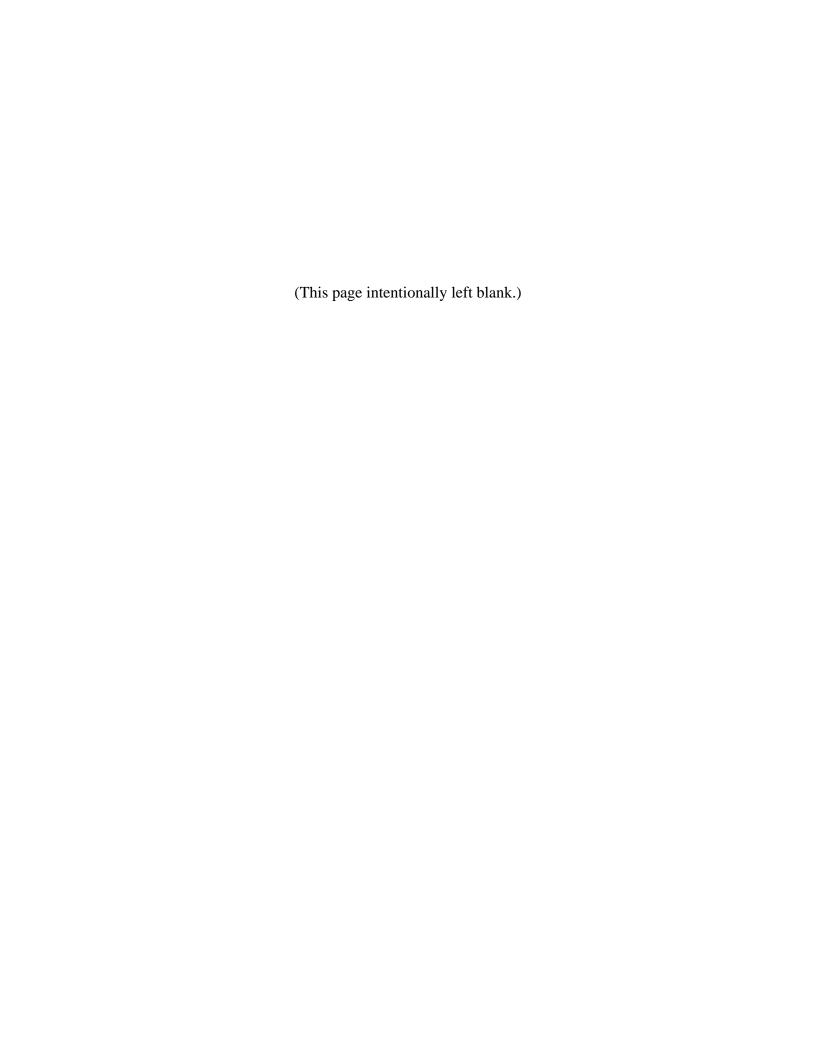

Figure ES-1. Four County Study Area

The recommended changes from the 2006 Brazos G Plan for Johnson County include:

- Higher projections of population and water demand for water user groups in the study area, including higher projections provided by the City of Mansfield for their Johnson County growth as reallocated from previous Tarrant and Ellis County estimates,
- New water management strategies for Alvarado, Grand Prairie, and Johnson County Special Utility District (JCSUD),
- Arlington considers becoming a wholesale water provider, and
- Cost estimate updates for all water management strategies in the study area.

1.0 Progress Report Summarizing Brazos G Activities

The Region C Regional Water Planning Group (Region C) and the Brazos G Regional Water Planning Group (Brazos G) have completed a study (Four County Study) that considers population and water demand growth for Ellis, Johnson, Southern Dallas, and Southern Tarrant Counties for the area shown in Figure 1. From August 2007 to December 2008, the Brazos G consultants coordinated and assisted Region C in gathering Johnson County-specific water demand and supply information for Johnson County entities, developed water management strategies based on the 2006 Brazos G Plan and information provided by Johnson County water user groups, and assisted in the preparation of the draft Region C report summarizing results of the study. Tasks for which Brazos G consultants have provided assistance to Region C are summarized below.

<u>August 2007</u> – Coordinated and assisted in developing meeting materials (agendas, water demand tables, graphs) for municipal water user groups in Johnson County based on information from the 2006 Brazos G Plan.

A review was conducted of recent water supply studies in the four-county area, with a primary emphasis on Johnson County entities. The overall message from the studies indicates that population and water demand projections are increasing at a faster pace than the Texas Water Development Board (TWDB) projections from the 2006 Plan. The City of Cleburne conducted a study¹ in May 2007 that showed that new industrial development and oil and gas exploration in the area have increased rapidly, which has led to increased water requirements. A study conducted by Johnson County Special Utility District (JCSUD)² showed substantially higher projected population and water demands in Year 2030 than TWDB estimates. The JCSUD study was used as a basis for recommending population and water demand updates, which show a 37% increase in projected population in Year 2030 and nearly 40% increase in projected Year 2030 water demands as compared to TWDB projections used in the 2006 Brazos G Plan. Since the 2006 Brazos G Plan, Johnson County Fresh Water Supply District No. 1 has merged with JCSUD and is shown accordingly in the Four County Study report. Additional

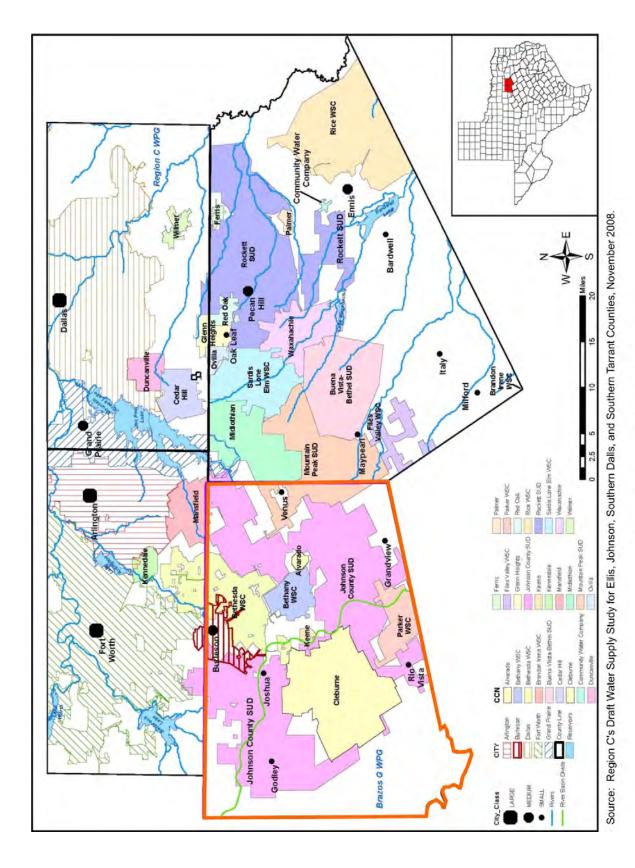

Figure 1. Four County Study Area

studies in the area were reviewed and considered including: information from the City of Arlington regarding their wholesale water rate study, and a report developed jointly by the Brazos River Authority and Tarrant Regional Water District in April 2004 entitled "Regional Water Supply and Wastewater Service Study for Johnson and Parker County".

<u>September 2007</u> – The Brazos G consultants, in a joint effort with Region C, met with the following seven Johnson County entities (from Sept 18-24, 2007) to discuss potential new water management strategies for Johnson County.

City of Alvarado City of Mansfield
City of Burleson Mountain Peak SUD
Bethesda WSC City of Venus

Johnson County Special Utility District (JCSUD)

During each meeting, the Brazos G and Region C consultants received feedback regarding current and planned water supplies, actual and historical water consumption, population (or connection) data, and future water demand estimates from the various entities' planning department to compare with TWDB population and water demand projections. Of the seven entities listed above, Bethesda Water Supply Corporation (WSC) and Mountain Peak Special Utility District (SUD) reported no updates. The other five entities (Alvarado, Burleson, JCSUD, Mansfield, and Venus) provided water planning projections based on current and historical usage that *are generally greater* than TWDB population and/or water demand projections. The raw population and water demand projections provided by Johnson County water entities is provided in Attachment A. Based on information provided by Johnson County water users, the recommended projections showed more than 100% increase for Mansfield and Venus, Alvarado, and Burleson as compared to TWDB estimates.

For other Johnson County entities that were not met with directly (and some Hill County water users located near Ellis County), the Brazos G consultants assisted Region C consultants in developing a Regional System Implementation Plan Survey. The survey requests system-specific information to include current and future population estimates, water demand projections, wholesale water supply contract information, and current and anticipated water supplies. A survey was sent to each of the following entities on October 16, 2007, requesting completed surveys to be returned by November 9, 2007.

Bethany WSC City of Grandview

Brandon-Irene WSC (Hill County)

City of Joshua/ JCFWSD #1

City of Cleburne City of Keene

Files Valley WSC (Hill County) City of Godley Parker WSC (Hill/Johnson County) City of Rio Vista

Table 1 includes a list of Johnson County entities from which surveys were not returned. Meeting notes developed by the Region C consultants were reviewed by Brazos G consultants for comment prior to distributing to the respective Johnson County water users.

Table 1.

Johnson County Water Suppliers Contacted by Meetings or Survey

Entities Met with	Entities Surveyed – Responses Received	Entities Surveyed – No Response Received
Alvarado	Bethany WSC	Godley
Bethesda WSC	Cleburne	Keene
Burleson	Grandview	
Johnson County SUD	Joshua	
Mansfield	Parker WSC	
Mountain Peak SUD	Rio Vista	
Venus		

October 2007 – Brazos G consultants provided water supply and water management strategy information to Region C consultants for Johnson County entities. Additional assistance was provided to clarify population, water demand, supplies for Johnson County water users.

November 2007 – Population and water demand projections based on local studies, meetings, or survey results were considered and population and water demands recommended by Region C were reviewed by Brazos G consultants for Johnson County entities prior to sending the draft results to water users. The population and water demand recommendations were reviewed for consistency with information provided by each of the Johnson County entities. In some cases, historical population and water use information was provided which was used to assess the reasonableness of extrapolating historical trends to future population and water demands projections (see Attachment A). Due to the large number of entities over the study area, there were numerous review processes required to ensure that the recommended population and water demand projections used in the study were consistent with the current trends that Johnson County entities are experiencing and their local plans. A copy of selected email correspondence from Brazos G consultants with comments and results of their reviews of Region C's interim analyses and reported results is presented in Attachment B-1.

<u>December 2007</u> – The Brazos G consultants participated in a meeting on December 19, 2007 with Region C consultants and wholesale water suppliers to discuss interest in providing additional water supplies, and timing of new projects and infrastructure improvements.

<u>February 2008</u> – A preliminary Population and Demand Projections Memo was developed by the Region C consultants and provided to the Brazos G consultants for review on February 14, 2007. The Brazos G consultants reviewed the preliminary draft report and provided comments. The Region C consultants addressed all comments.

May 2008 – A second draft Population and Demand Memo was reviewed by the Brazos G consultants in addition to providing clarification of future water management strategies for Johnson County entities. When more information was needed, the Brazos G consultants contacted Johnson County water users for clarification regarding future water supplies and timing of infrastructure projects. A third round of comments was provided and addressed in the final draft Population and Demand Projections Memo issued by the Region C consultants on May 22, 2008.

<u>June 2008</u> – The Brazos G consultants provided technical assistance related to Johnson County water user groups as included in the draft report documenting the Four County Study. Information for Johnson County water management strategies was provided from recent water supply studies for Johnson County entities and the 2006 Brazos G Plan including: water treatment costs, infrastructure costs, and unit water costs. The Brazos G consultants provided assistance for consideration of groundwater projects identified by Johnson County water users during the November 2007 meetings or provided in survey responses.

<u>July 2008</u> – The preliminary draft Four County Study Report was provided to the Brazos G consultants on July 3, 2008. The Brazos G consultants reviewed the draft report and provided comments to the Region C consultants. On July 22, 2008, the Brazos G consultants met with the Region C consultants, Tarrant Regional Water District (TRWD), and Trinity River Authority (TRA) to discuss comments on the preliminary draft Four County Study Report.

<u>August 2008</u> – The Brazos G consultants began reviewing a second draft of the Four County Study Report provided on August 27, 2008. Additional information regarding costs of water management strategies was provided to the Region C consultants as needed.

<u>September 2008</u> – The Brazos G consultants continued reviewing the second draft Four County Study Report provided on August 27, 2008. Several coordination phone calls with the Region C consultants were made for clarification of water management strategies and population

projections and water demands for Johnson County water user groups. On September 26, 2008, the Region C consultants sent the draft Four County Study Report to wholesale water providers (including the Brazos River Authority). An appendix with costs of water management strategies was provided.

October 2008 – The most recent draft Four County Study Report with associated appendices was reviewed by the Brazos G consultants. Several key wholesale water providers in Region C and Brazos G are also in the process of reviewing the draft Four County Study Report. On October 20, 2008, the Brazos G consultants attended a meeting with the Region C consultants and wholesale water providers to discuss their comments on the draft Four County Study Report. A status update of preliminary Four County Study Report results was provided at the Brazos G meeting on October 29, 2008 as provided in Attachment B-2, which also includes a comparison of interim recommended population and water demand projections to Brazos G 2006 Plan projections provided by the TWDB.

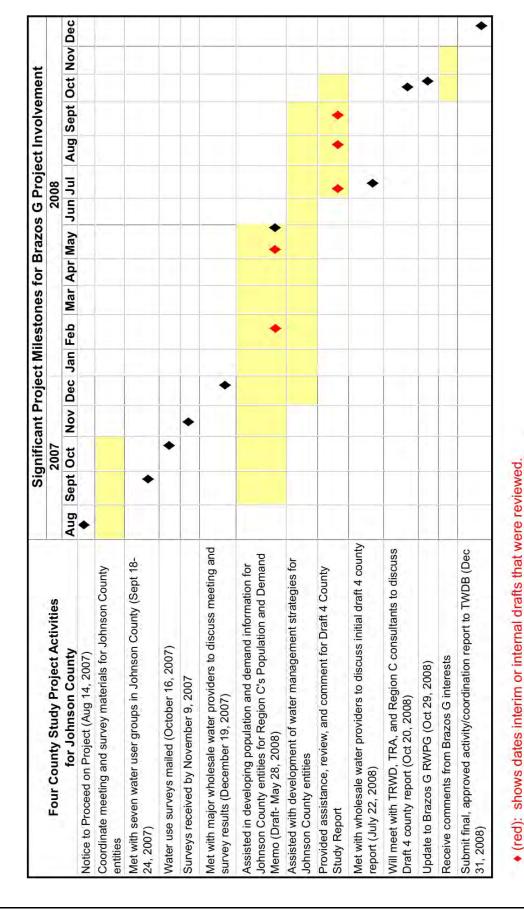

November to December 2008 – After addressing the comments from wholesale water groups and consultants, the Draft Four County Study Report was provided to the Brazos G RWPG and Johnson County municipal water user groups for review. In accordance with Regional Water Planning Guidelines, the Draft Four County Study Report was available for public review and comment at the Brazos G RWPG meeting held on December 3, 2008. There were no comments on the Four County Study provided at the Brazos G RWPG meeting. The Draft Four County Study Report was submitted by Region C on or before December 31, 2008.

A schedule of key project dates and a summary of Brazos G project involvement is provided in Figure 2.

<u>January to February 2009</u> – The draft report was in the process of being reviewed by the TWDB. There was no Brazos G activity during this time.

March to April 2009 – The Brazos G consultant received comments from the TWDB on the draft study reports and prepared preliminary response which was considered by the Brazos G RWPG at their meeting on April 15, 2009. The Brazos G consultant prepared updates to the draft study reports and submitted the final study report to the TWDB by the April 30, 2009 deadline.

Figure 2. Project Schedule

2.0 Study Results Summary

The Draft Four County Study Report³ after review by regional wholesale water providers, the Region \mathbf{C} website on November 10. 2008, was posted to (http://www.regioncwater.org/Documents/index.cfm) for comment. A summary of tables and figures from the Draft Four County Study Report for Johnson County water users is provided in the attachments to this report. Attachment C presents population and water demand projections for Johnson County with a comparison to projections from the 2006 Brazos G Plan. A summary of existing water supplies is shown in Attachment D. Recommended water management strategies are included in Attachment E. Separate tables showing supply, demand, and water management strategies for Cleburne, JCSUD, and the Brazos River Authority are also included in Attachment E.

The recommended changes from the 2006 Brazos G Plan for Johnson County include:

- Higher projections of population and demand for water user groups in the study area, including higher projections provided by City of Mansfield for their Johnson County growth as reallocated from previous Tarrant and Ellis County estimates,
- New water management strategies for Alvarado, Grand Prairie, and JCSUD,
- Arlington considers becoming a wholesale water provider, and
- Cost estimate updates for all water management strategies in the study area.

TWDB comments on the draft report were provided to Brazos G and their consultant during March 2009. The Brazos G RWPG approved a set of responses to the TWDB comments for this study on April 15, 2009. A copy of the TWDB comments and summary of how comments were addressed in the final study report are provided in Attachment F.

Revised Max Water Demand (MGD)		9.5	10.3	14.3	19.2	23.3	29.0

* Note: Hill County households were estimated based on growth trends in Johnson County districts near Hill County and CCN service area. $\mathcal{E} = 37484 \qquad \mathcal{E} = 73218 \qquad \mathcal{E} = 110833$

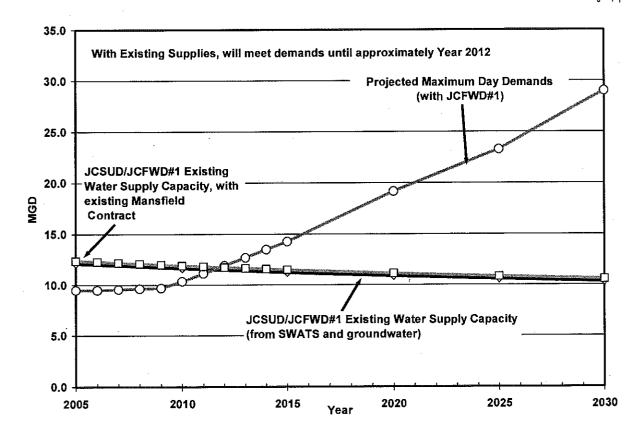

Figure 2-2. Comparison of Existing Contracted Water Supplies to Projected Water Demands — JCSUD and JCFWD#1 Systems

If 1.72 MGD from the City of Granbury SWATS interest is added to JCSUD/JCFWD#1 system, then supplies will meet demands until approximately Year 2014 (Figure 2-3).

Mountain Peak Sud backup

ROBERT T. CHILDRESS, Jr., P.E. BENJAMIN S. SHANKLIN, P.E. ROBERT T. CHILDRESS III, P.E.

July 13, 2006

Mr. Robert G. Sokoll, City Manager City of Waxahachie P.O. Box 757 Waxahachie, Texas 75168-0757

Re:

Proposed Robert W. Sokoll Water Treatment Plant

Dear Mr. Sokoll:

This letter is in response to your July 3, 2006 letter on the above referenced Water Treatment Plant. We represent the following interested participants as their Engineer of Record:

> Avalon Water and Sewer Service Corporation Buena Vista-Bethel Special Utility District Files Valley Water Supply Corporation Mountain Peak Special Utility District Rockett Special Utility District Sardis-Lone Elm Water Supply Corporation South Ellis County Water Supply Corporation

The Rockett S.U.D. currently serves the City of Ferris and the City of Palmer and we included their water use and demand projections in the attached tables.

The information you requested is as follows:

- 1. Each of the interested participants will forward a letter of intent under separate
- 2. Attached is a composite service area map for each of the entities.
- 3. Water use and demand projections have been prepared and summarized in the attached tables.
- 4. Existing raw water rights in the Tarrant Regional Water District System are summarized as follows:

Avalon Water and Sewer Service Corporation	$0.60~\mathrm{mgd}$
Buena Vista-Bethel Special Utility District	0.85 mgd
Boyce Water Supply Corporation	$0.32\mathrm{mgd}$
Bristol Water Supply Corporation	0.21 mgd
City of Ferris	$0.72 \mathrm{mgd}$
City of Palmer	0.271 mgd
Rockett Special Utility District	5.52 mgd

5. Our address and contact information is shown on the letterhead.

Please advise if additional information is required on this matter

Very truly yours,

CHILDRESS ENGINEERS

Benjamin S. Shanklin, P.E.

BSS/sm Encl.

Attachment B-1 Selected Comments Provided to Region C in Response to Reviews Conducted by Brazos G Consultants

The comment process between Region C and Brazos G consultants was extensive with over 350 emails recorded during development of the "Four County Study" report in addition to numerous phone calls. In an attempt to provide a useful and practical response to address the TWDB's request for a summary of reviews and comments, this attachment includes several email chains that present the results of selected reviews and comments provided by the Brazos G consultant as a result of these reviews. The comments provided in the attached email may indicate slightly different results than those included in the report, since the review and comment process required several iterations prior to inclusion in the final report.

Shaw, Kristine

Subject: RE: DRAFT population and demand memo for the Four County Study

Stephanie,

Due to time constraints, I have taken a cursory review of the attached memo and have some comments for you to consider. Since most were "global" comments for the document, I've attached list below rather than track changes. As I understand from you, this is a draft memo and I'll perform a more detailed review prior to finalizing. Please send me the finalized draft memo that will be sent to RCWPG members.

(1) There were surveys sent to Brandon Irene WSC and Files Valley WSC, both of which have population and demand in Hill County. Were these included in the population/demand estimates? If not, consider footnoting in tables so that information is not misused as total amts. Also, was JCSUD's Hill County population/water demands included in Johnson County tables? If so, this should be footnoted as well.

The county summary tables are simply for the entity areas located within that particular county. I will add a footnote indicating entities that are partially located in other counties.

(2) I noticed in spreadsheets that for water users in multiple counties, the population was prorated amongst applicable counties (i.e. Burleson). Please document the method since this often results in estimates that are different than Brazos G and Region C 2006 Plan projections.

Bethesda WSC is the same as what was included in DB07.

Burleson has 20% in Tarrant County and 80% in Johnson County (Based on breakdown used in DB07. Because the change was so minor over time, the 80/20 split remained constant.)

Johnson County SUD is based on the percent breakdown used in DB07.

Mansfield told us when we met that they expect all growth to occur in the southern area of their city. Mansfield in Tarrant and Ellis Counties kept the same values in 2010 as are shown in DB07. The 2010 value was increased by 3% in 2020 and by 2% in 2030. The Mansfield Johnson County got all of the remaining population.

Mountain Peak SUD uses the same percentages of population in each decade as was used in DB07.

Parker WSC is based on 15% being in Hill County and 85% in Johnson County as was shown in DB07 for 2010. The change was minor over time and the percentage was held constant.

I do not see the value in adding this description to the memo. None of these entities look at themselves divided by county or basin lines. If you have questions about other splits or want to discuss the method for a particular split, let me know.

(3) Was JCSUD and JCFWSD # 1 combined in estimates? If so, please add footnote or text.

Yes. JCFWSD#1 in included in JCSUD. I will add a footnote.

(4) JCSUD 2006 Plan shows estimated 39,485 people in 2010 (i.e. 14358 x 2.75 people per connection). Could you please clarify where low population of 41,250 came from (i.e. Table 2)?

When we met with JCSUD, Terry said that he didn't expect to have more than 15,000 connections by 2010. $15,000 \times 2.75 = 41,250$. I will adjust this number to match the 14,358 x 2.75 people per connection.

(5) Did Acton MUD receive a survey? If not, may want to consider footnoting in tables since I think it implies that they have been contacted and/or participated in the study.

Acton MUD is primarily in Hood County. We did not send a survey to them. I will add a footnote to those entities primarily in counties outside of the study area that were not surveyed.

(6) Venus population is different by 1000. Was that included to account for prison inmates?

Yes, the prison population is that additional 1,000 people. This matches the information they provided to us when we met

with them.

(7) In Table 3, gpcd projections I spot checked how gpcd was calculated. In JCSUD's case, it appears that it was calculated based on population in ellis county (< 1% JCSUD's population) rather than Johnson County (> 95% of population). I think if GPCD is going to be generalized for water user groups and it varies amongst multiple counties that it should be based on county with the majority of the user's population.

I believe that the gpcd should be the same across an entity, no matter how many counties/basins it crosses. The gpcd for Johnson County SUD was based on the Johnson County gpcd calculated from DB07, including JCSUD, JCFWSD, and Joshua. Using the Johnson County portion demand of 8,780 AF/Y in 2010, 11,242 AF/Y in 2020 and 13,957 AF/Y in 2030 and the Johnson County populations of 49,097 in 2010, 61,952 in 2020, and 75,457 in 2030, I get 160 gpcd in 2010, 162 gpcd in 2020, and 165 gpcd in 2030.

(8) In Wholesale Water Providers section, it mentions that "Grand Prairie will become a wholesale water provider...". Tables 14-17 include recommended population and demand projections attributed to wholesale water users. Consider

adding similar table for Grand Prairie.

I will add a table for Grand Prairie. We are also adding a note that Arlington in interested in becoming a wholesale water provider in the future. We will not add a table for this as they do not have any contracts in the works that are ready to be shared.

(9) Joshua's population and demands in Table 7 does not match population and demands shown in Table 2 and Table 5, respectively. Please clarify and/or add footnote.

The difference is due to the fact that Joshua has groundwater supplies in addition to the surface water they purchase from JCSUD. Thus, the entire population and demand are not attributed to JCSUD. The groundwater use is backed out of the demand on JCSUD. Then the gpcd is used to back calculate the population attributed to JCSUD.

(10) Meeting minutes from meeting with JCSUD includes contract negotiations with Mansfield for 5-6 mgd (peak) water supply. This is not mentioned in memo or included in Table 8 or Table 14.

I will add this and the Grand Prairie contracts to the tables. I had not originally included them because they are not final. However, they are very likely to happen.

(11) JCSUD's SWATS contract is for 7 MGD (i.e. 7846 acft/yr). Could you please describe the source of 9,700 acft in Table 17. Also, the JCSUD contracts are for Lake Granbury supplies (not Lake Whitney).

Brad Brunett sent me the 9,700 AF/Y number yesterday. I have straightened out the JCSUD source, as well as the Aquilla WSD source.

As a suggestion, when I read the conclusion it left me with the following question: "How many water users considered in this study have sufficient supplies (with existing contracts)? And how many have shortages?" It may be beneficial to add a statement that this will be considered when evaluating scenarios for providing additional water supplies in the 4 county region.

I can add some text to this effect.

Thanks for sending to us for review. Hope you have a good weekend.

Kristi

Subject: RE: DRAFT population and demand memo for the Four County Study

Good Morning!

Here is a revised version of the memo. I have included Wayne's editorial comments. I have added the BRA information (shown in tracked changes).

Tom just stopped by and suggested that we may not want to include the overall graphs for the study are, as the large cities not in Ellis and Johnson County seem to skew the growth in the study area. He and I will discuss this tomorrow before I send the draft memo to the RCWPG. The memo is a discussion item on the RCWPG agenda for their meeting on Monday.

I am heading over to a class that will last the whole day. If you have comments or questions, please send those to me. I will get those at the end of the day, unless we get a break earlier! I plan to make revisions this evening and tomorrow morning after talking with Tom about the overall study area graphs. If you have any thoughts on the overall study area graphs, please send them to me!

Sincerely,

Stephanie W. Griffin, P.E.

'Stephanie Griffin'; Dunn, David

Subject: RE: Johnson County graphs

Stephanie,

As I understand, you developed the recommended population of 39,485 in 2010 up to 110,833 in 2030 based on Table 2-2 from JCSUD's Water Supply Plan (Dec 2006) and 2.75 people per connection which *includes Joshua*. How did you calculate recommended JCSUD demands of 7,077 acft in 2010; 13,287 acft in 2020; and 20,610 acft in 2030? Looks like the breakdown by county is based on projected population (as percent of total) in each county. If the Ellis/Hill/Johnson/and Tarrant demands were calculated based on population then these numbers may already include Joshua (which was previously served completely by JCFWSD # 1). It still appears that the demand table that you provided may be double counting the Joshua demands. We request that you break out the Johnson County demands as Johnson County (JCSUD) and Johnson County (Joshua) and remove the separate line item for Joshua. The difference in the total number of connections from Table 2-2 and Table 2-1 (from JCSUD's Water Supply Plan) are the number of connections attributed to Joshua in Johnson County.

Please also see the notes embedded in green text below. Feel free to call if you need additional clarification.

Thanks, Kristi

Subject: RE: Johnson County graphs

On Johnson County SUD, I have run across a few issues that we need to clarify...

- 1. I can remove the year 2010 Grand Prairie demand on Johnson County SUD. No problem there. Thanks
- 2. I cannot remove the Ellis County demand on the SUD, unles it doesn't exist in Ellis County. I can change the percentage of the WUG in Ellis County, but the TWDB shows that the SUD exists in Ellis County. Does Johnson County SUD not exist in Ellis County? The percentage of JCSUD demand was allocated assuming that 0.43% of the pop/demand is in Ellis County, 95.05% is in Johnson County, 4.2% is in Tarrant County, and 0.32% is in Hill County. In the summary table in the memo and in the Excel sheet, the SUD is listed as its own entity (broken down by county and basin) and Joshua is listed as a customer. (See attached Excel file.) JCSUD does currently exist in Ellis County, but JCSUD estimates losing these connections in the future. To simplify, I'd recommend keeping in population and demand tables and then in the potential future customer demands showing Potential Loss of connections in Ellis County (similar to the line items for Fort Worth and Burleson).
- 3. The demand and supplies shown in the Excel sheet are average day (dry year) numbers. It is my understanding that the 6 MGD from Grand Prairie and the 6 MGD from Mansfield are peak day supplies. Using a peaking factor of 2, I get an average day supply of 3 MGD from each source. Has something changed or is the answer Terry wants in order to meet the 2030 shortfall? JCSUD is currently negotiating contracts with Grand Prairie and Mansfield. According to Terry although the Grand Prairie contract specifies a peak of 6 MGD, it does not show a max yearly supply so the peak contracted supply could be utilized every day. He requested to include 6 MGD for Mansfield and 6 MGD for Grand Prairie.
- 4. As a follow-up on Kristi's Alvarado question, JCSUD has an emergency connection with Alvarado. It is my

understanding that Alvarado has been taking water from them in recent years. If Terry wants to remove that, I can do so. We do not request removing Alvarado water. It is true that JCSUD has been providing them water over the past few years. Please leave as is in the table.

Let me know your thoughts.

Sincerely, Stephanie

Subject: FW: Johnson County graphs

Stephanie,

Kristi sent this to me last night and called me this afternoon to make sure I sent it to you. I have added some text to the Word document that should help clarify things. My text is in blue and burgundy.

We would also suggest removing Joshua demands from Johnson County SUD to avoid any confusion in the future. Joshua is considered to be a WUG by the TWDB, and it will be less confusing to have Joshua and their demands shown separately, with Johnson SUD supplying their demands. This will avoid any double counting when we get to developing the regional water plan. I do not see the TWDB agreeing to remove Joshua as a WUG.

Based on our conversation last Wednesday, here is clarification regarding items that we looked into:

From: Stephanie Griffin [mailto:swg@freese.com]

Sent: Wednesday, April 30, 2008 9:22 AM

To: Shaw, Kristine

Subject: Johnson County graphs

Kristi-

Here is the file we have put together showing the projected demands based on this study and the current supplies. There is also information regarding future supplies based on the 2006 Plan. I have put notes on the graphs explaining how shortages will be met, when known. I am sending you all of the tables and graphs as some of the tables have date linked to one another. For the TRWD customers, we changed the current and future supplies being graphed to represent the amount of water contracted. Wayne needed this information to help answer the question as to who really needs additional contracts and who has enough supply contracted through 2030. For the current DWU customers, we are assuming that DWU will bring on supply needed to meet these demands and there will not be any shortages. (Grand Prairie is an exception to this assumption.) I did not change the graphs to reflect "no shortages" for DWU current customers.

The blue tabs are the Johnson County entities. These are the ones I could use your help solving (particularly the ones in **BOLD**). The following summarizes my understanding of the situation:

Acton MUD - no shortage; no changes needed

Alvarado – purchase from Johnson County SUD or from Midlothian (Midlothian has not been approached with this idea but TRWD is open to it); let me know your thoughts

For Alvarado, add as WMS Venus- Through Contract With Midlothian; and as alternate strategies JCSUD and Groundwater

Burleson - no shortage; Why doesn't Burleson have conservation as a strategy?

As discussed, Burleson shows 140 gpcd by 2030. Conservation is encouraged for all entities, but only those exceeding 140 gpcd by 2030 had accelerated conservation targets recommended.

Bethany WSC – shortage in 2010 and beyond; 2006 Plan recommended JCSUD for supply; noted in survey response that they are considering Keene as a possible source of supply; does Bethany want to add Keene as a strategy? Is Keene willing to sell to them?

Discussed with James Minor (City of Keene) on 5/19. Keene is projecting excess water supplies in the future and amenable to providing water to Bethany WSC. Keene is not actively pursuing additional supplies (BRA SWATS is sufficient) although on a long-term basis they would like to secure water supplies from TRWD.

Add Keene and JCSUD as possible WMS for future supplies.

Bethesda WSC – shortage in 2010 and beyond; planning to increase contract for Fort Worth supply to meet needs; SWG will call and ask about Arlington as a potential supplier for the east side of system

Brandon-Irene WSC - no shortage; no changes needed

Cleburne - no shortage; no changes needed

Please see attached specifics regarding Cleburne, Johnson County- Manufacturing and Mining, and contracted supplies based on our records.

Godley – shortage in 2010 and beyond; 2006 Plan recommended BRA SWATS; any changes to this recommendation?

No changes to the recommendation.

Grandview – shortages in 2010 and beyond; no strategies in 2006 Plan but has shortages now; suggested BRA SWATS as potential source in response to survey; is that the recommended strategy we should use for this study?

Use BRA SWATS as recommended strategy per Grandview's request.

Johnson County SUD – shortage in 2030 even after considering the contracts being negotiated with Grand Prairie and Mansfield right now; How do we meet this shortage?

Johnson County SUD recommends removing Ellis County and Grand Prairie demands. Furthermore, the supplies from Grand Prairie and Mansfield need to be increased to 6 MGD (for each supply), per Terry Kelley. Based on spreadsheet that you provided, I wasn't able to determine exactly how the demands for Ellis/Tarrant/Johnson/Hill county were determined. However, the population needs to be separated for Johnson County (JCSUD) and Johnson County (Joshua) based on attached tables (Tables 2-1 and 2-2). Please continue this format through the demand section. Joshua = JCFWSD # 1

Future WMS: TRWD supplies

Joshua - no shortage; no changes needed

Keene - no shortage; no changes needed

Parker WSC – shortage in 2010 and beyond; 2006 Plan recommended BRA SWATS; entity increased supply from BRA SWATS in survey response; assume BRA SWATS is the answer?

Yes, BRA SWATS for Parker WSC.

Rio Vista – shortages in 2010 and beyond; 2006 Plan recommended BRA SWATS; entity also plans to drill another well in Trinity aquifer and add storage according to survey response; any other strategies to consider? Consider as alternate, Cleburne due to proximity. Note: Cleburne has not been contacted about this. This was based on recommendation of JCSUD due to proximity of Cleburne and Rio Vista.

Venus - no shortages; no changes needed

Johnson County-Other - no shortages; any changes needed?

We made a slight adjustment to Cleburne's population and demand projections to match the latest information they sent to TRWD. They are included in these tables. That's the only change that I remember for the population and demand memo. I will send the updated memo next week. We will be seeking the RCWPG approval of that memo on June 2.

If you have any questions, let me know. If you want to schedule a phone conference to run through these – before or after you finish reviewing them, just let me know. Do you think you could send your recommendations for these entities by May 15?

Thanks! Stephanie

Subject: Johnson County questions

Hi Kristi!

I got your message. We are still working on the draft report for the Four County Study – getting close to finishing it!!! I will send you a copy as soon as it is ready. I have a couple of questions for you:

- Parker WSC plans to drill additional wells in Johnson County for additional supply. Is there any groundwater
 available to allocate to Parker WSC for this purpose? (They may be interested in pursuing WIF Funding.)
 Which aquifer? Their current supply is from the Trinity Aquifer, which is currently overallocated (see comment
 below).
- 2. Rio Vista plans to drill a new well in the Trinity aquifer. Can we add that as a strategy? (They may be interested in pursuing WIF funding.)

According to groundwater availability estimates, additional Trinity supplies are not available. If added as a strategy for Rio Vista, please qualify as "New Well in the Trinity Aquifer for a short-term basis while additional strategies are being pursued".

3. For the Cleburne supplies, can you remind me what the 2,417 AF/Y in 2010 called "Additional Water from Lake Whitney (BRA)" is?

That seems to have been a carry-over from data that you supplied in a spreadsheet. The 2417 acft/ in 2010 is not mentioned in the 2006 Brazos G Plan.

Thanks! Stephanie

Stephanie W. Griffin, P.E.

Subject: RE: revisions to Section 2

Stephanie,

Thanks for the feedback. I appreciate you compiling such a detailed response for comments! Please see insertions below, for clarification.

Kristi

From: Stephanie Griffin [mailto:swg@freese.com] **Sent:** Thursday, September 04, 2008 9:17 AM

To: Shaw, Kristine

Subject: revisions to Section 2

Kristi-

I worked on Section 2 last night. I wanted to provide the following updates/questions to you:

- Table 2.2, the Rural County-Other for 2000 recalculates to 65,593 (not 65,066). Did I miss something? My
 calculations show that Rural County-Other recalculates to 65,066 when changing Mansfield from 129 to 622 (and
 keeping county total at 126,811).
- 2. Brandon-Irene WSC shows Trinity aquifer (Hill County) as a current source in DB07. They did not respond to the survey. Is that Hill County groundwater not a current supply? (Table 2.4) Perhaps qualify Trinity Aquifer (Hill County) since table is for Ellis County.
- 3. My understanding of JCSUD's contract for 40 MG/Y of Mansfield water is that the pipeline is not yet in place. So, the Mansfield supply should remain in the "Contracted Supplies Not Yet in Use" column in Table 2.4. Is my understanding correct? According to JCSUD, they are currently using a small supply from Mansfield and currently negotiating contract for supply increase. Based on this information, it should be in "current supplies".
- 4. For Figure 2-1 and Table 2.4, we are not planning to show the retail supplies (unless they are significant) from Rockett and other suppliers. The Sardis-Lone Elm supply to Midlothian is retail and is a small portion of the city. I have removed this supply from Table 2.4. OK
- 5. I am checking with Tom on the Midlothian supply from TRWD (TRA). I believe we need to add this to Table 2.4 (second column) and to the Figure 2-1. Tom's input on #5. Midlothian has a contract but the water cannot be used until a WTP is built. So the TRWD through TRA will remain as a Contracts Supply Not Yet in Use. Suggest removing TRWD (through TRA) from current supplies.
- 6. You are correct that Oak Leaf and Pecan Hill do not have groundwater supplies.
- 7. Red Oak has a contract with TRA for supply, which it does not plan to use. The source is not Joe Pool Lake. The Joe Pool Lake supply to Red Oak in DB07 is the retail supply that Rockett supplies within the city limits. I will leave the "Contracted Supplies Not Yet in Use" just as "TRWD water through TRA". Sounds good.
- 8. I added TRA in front of Lake Bardwell for Rice WSC (Table 2.4).
- 9. Good catch on the existing Dallas contract for Rockett SUD in Table 2.4! I also added that to Waxahachie.
- 10. Sardis-Lone Elm WSC currently relies on groundwater. A portion of their service area receives retail supply from Midlothian. That is not really a contracted supply that is not in use. (Table 2.4) In Table J.1 of 2006 Region C Plan, it shows 0 Midlothian supplies from 2010 to 2060. Is the Midlothian supply planning to go away for Sardis-Lone Elm WSC in the future?
- 11. The additions you mentioned for Ellis County Manufacturing and SEP have been made in Table 2.4.
- 12. Page 2-7, Grand Prairie currently has and uses a 2 MGD (peak day) contract with Fort Worth (TRWD sources). I believe the constraint to increasing that supply is the pipeline size. There may also be some politics involved. Consider modifying sentence to show Ennis and Grand Prairie get water indirectly from TRWD through contracts with TRA and Fort Worth, respectively. JCSUD has contract for TRWD water through Mansfield. I think this would tie in and be consistent with rest of the paragraph which qualifies (through TRA) for Ellis-County

Appendix C- Population and Demand Projection Memo

Attachments: Status_090908.ppt

Stephanie,

As you are busily addressing comments for the four county study. I have a few initial comments for the memo (Appendix C) as listed below. I understand that it is a tremendous effort to incorporate comments especially with so many numbers in the report. Kudos!

(1) Figure 2- Typo in legend (2006 Brazos G Plan)

Include JCFWSD#1 population in 2006 Region C Plan line

- (2) Figure 3- Include JCFWSD#1 population in 2006 Region C/Brazos G Plan line
- (3) Table 3- Include JCFWSD#1 population in 2006 Regional Water Plan columns (total for Johnson County should equal 151,468 and 180,509 and 211,020 for 2010-2030 respectively). For recommended columns, I'd suggest adding footnote to say that JCFWSD#1 population is included in JCSUD projections.
- (4) Table 7- Include JCFWSD#1 demands in 2006 Regional Water Plan columns (total for Johnson County should equal 32,407 and 37,478 and 42,911 for 2010-2030 respectively). For recommended columns, I'd suggest adding footnote to say that JCFWSD#1 population is included in JCSUD projections.
- (5) At bottom of text on page 20 when describing adjustments to demands for non-municipal use, include a sentence mentioning increasing water demands for Cleburne S&E and Manufacturing based on information provided by Cleburne.
- (6) Regarding Tables 9 11, I think it would be useful to add text to explain why population and demand projections for wholesale water providers (in tables 9-11) are different than those shown in Tables 3 and 7.
- (7) Table 10: revise to be consistent with format of comparable tables for other WWP by stating "In-City, xxx County Portion" for population and demand projections.

verify Joshua, seems like population should be equal to those shown in Table 3

verify Tarrant County population portion. Shouldn't it be 32,281 for 2010 and 94,540 for 2030 based on Table 3? or is 2010 population adjusted upward to reflect supply to Grand Prairie?

- (8) Revise Table 11 and 12 to state "In City Portion" for population projections (remove "demand")
- (9) Regarding Table 11, how are you divvying up population projections for JCSUD and Grand Prairie. Is population (and demands) possibly being double counted and included in Tables 9 and 10?

I've attached a couple of tables with Johnson County WUG totals for your reference. Please call if you have guestions.

Thanks, Kristi

entities.

- 13. Page 2-7, Oak Leaf gets a small amount of retail supply from Rockett SUD. I am not including them in the TRWD write-up because they are not a wholesale customer. OK
- 14. I will include Pecan Hill in the TRWD write-up because Rockett SUD supplies them 100% retail.
- 15. Sardis-Lone Elm WSC is also not included in the TRWD write-up because they are a potential future customer, not an existing customer.
- 16. Page 2-12, the list of sources is based on the 2006 Plan. JCSUD was listed as a potential participant in the Dallas project for Ellis County. Terry would like to keep Dallas as an alternative just in case he needs that some day. Stating that JCSUD would seek "additional water from Dallas" suggests that it now receives water from Dallas. This comment also applies to others in the list (i.e. Rockett SUD & Waxahachie). I would suggest qualifying by footnote or otherwise "An alternative strategy for JCSUD is to purchase water from Dallas, however this strategy is not being actively pursued." It seems like the others in the list (i.e. Red Oak, Glenn Heights, Grand Prairie) have more active plans (i.e. contracts) for additional water from Dallas.

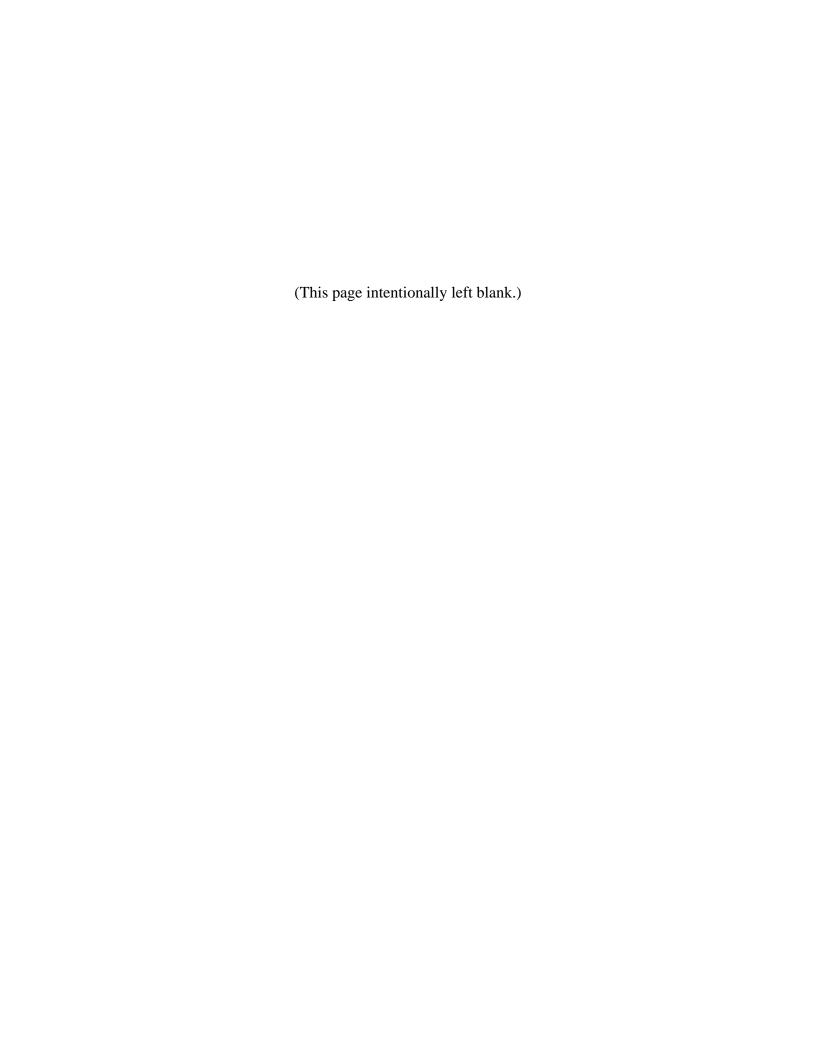

You spent a lot of time on Table 2.4 and I appreciate your help! I am glad to see that the Johnson County tables appear to have passed your review! I am glad I worked on Section 2 last night. It took longer to get through than I had expected. I will send you additional updates/answers/questions as I incorporate your comments in the remaining chapters.

Sincerely, Stephanie

Stephanie W. Griffin, P.E. Water Resources Planning

Freese and Nichols, Inc. 4055 International Plaza, Suite 200 Fort Worth, TX 76109 p (817) 735-7353 f (817) 735-7491

Attachment B-2 Interim Progress Report Update on Brazos G Activities in Support of Region C's Four County Water Supply Study

(Presentation from Brazos G Regional Water Planning Group on October 29, 2008)

Agenda Item 6.5

Study No. 4
Update on Brazos G Activities in Support of
Region C's Four County Water Supply Study

October 29, 2008

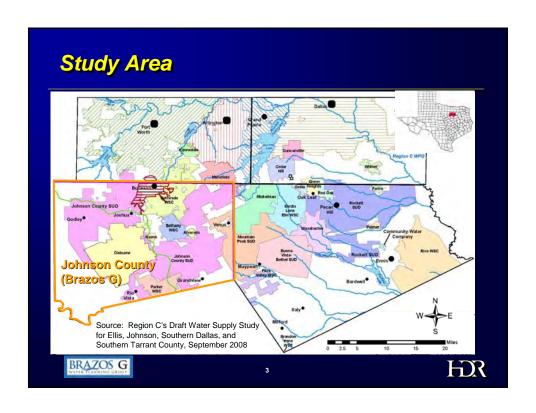

Background on Study

- ✓ Study area covers Johnson, Ellis, and southern portion of Tarrant and Dallas Counties
- ✓ Joint study between Region C and Brazos G
- ✓ Study time period through Year 2030.
- ✓ Study Objectives:
 - Review recent growth in the study area
 - Consider population and demand projection updates compared to 2006 Plans and recommend revisions (as necessary)
 - Update current and future water supply plans

ЮR

Progress Report

- ✓ Met with most Johnson County Water User Groups located in the Trinity River Basin
- ✓ Survey sent to remaining Johnson County municipal entities
- ✓ Evaluated changes to population and water demand projections based on water user group feedback
- ✓ Draft updates to current and future supplies based on water user plans
- ✓ Preliminary analysis of water management strategy costs
- ✓ Met with major regional water providers in Brazos G and Region C study area (BRA, TRWD, TRA, City of Dallas)

Estimated 2007 Population for Johnson County Cities

City	2000 Census Population	State Data Center Estimated 2007 Population	% Average Annual Growth Rate
Cleburne	26,005	29,567	1.85%
Burleson*	17,514	27,329	6.56%
Keene	5,003	5,971	2.56%
Joshua	4,528	5,299	2.27%
Alvarado	3,288	4,087	3.16%
Venus	1,892	2,435	3.67%
Grandview	1,358	1,543	1.84%
Godley	879	1,061	2.72%
Rio Vista	656	768	2.28%
Mansfield*	622	867	4.86%
Rural County-Other	65,066	74,372	1.93%
County Total	126,811	153,299	2.75%

^{*}Some of the population in these communities is located in neighboring counties.

Notes: Only the population for the portion of the entity located in Johnson County is shown here.

Most of the areas outside city limits are supplied by special utility districts and water supply corporations.

Rural County-Other served by water supply corporations, special utility districts, and cities with population less than 500 people. County-Total includes city population and rural unincorporated areas within the county.

10

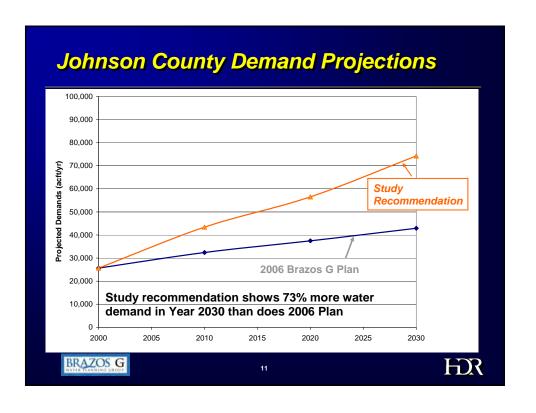

c Brazos G 2006 Plan Johnson County manufacturing demand split between Johnson County and Cleburne.

d Johnson County- Mining increased to account for mining demands as a result of development of Barnett Shale.

Brazos G 2006 Plan Johnson County- steam electric demand classified as being supplied by Cleburne.

All units are in acre-feet per year.

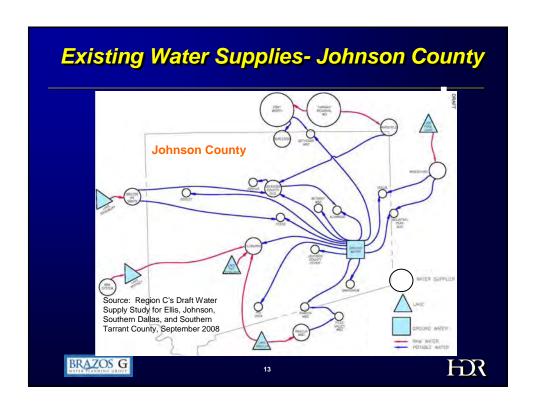

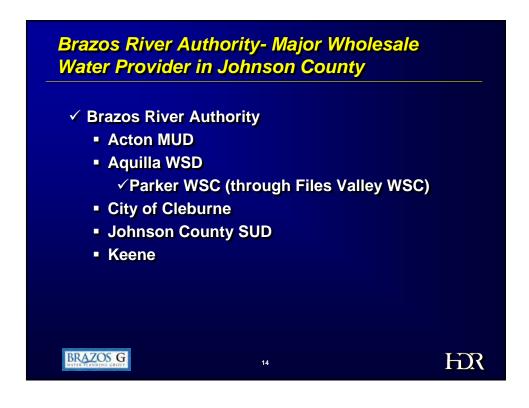

Summary of Population and Water Demand Projections

- ✓ Based on local input and State Data Center projections:
 - Population projections greater than in 2006 Plan for most Johnson County water user groups
 - Municipal demands generally greater
- ✓ City of Mansfield anticipates most of their future growth to occur in Johnson County
- ✓ Mining demand increases based on TWDB Barnett Shale study
- ✓ Higher Manufacturing and Steam-Electric demands anticipated based on information provided by City of Cleburne

12

Other Key Water Providers in Johnson County

- ✓ City of Cleburne
 - In-city municipal customers
 - Non-municipal customers (Johnson County Manufacturing, Steam-Electric, Mining)
- √ Johnson County Special Utility District
 - Municipal customers within service area
 - City of Joshua
 - City of Alvarado
 - Johnson County Mining

Attachment E Recommended Water Management Strategies for Johnson County Water User Groups

(Graphs and figures obtained from Draft Water Supply Study for Ellis County, Johnson County, Southern Dallas County, and Southern Tarrant County, September 2008)

Table E-1.
Summary of Recommended Water Management Strategies for Johnson County

Water User Group	Currently Contracted Supplies	Recommended Strategies		
Acton MUD	Trinity Aquifer, BRA SWATS	None		
Alvarado	Trinity Aquifer, Johnson County SUD	Temporarily Overdraft Trinity Aquifer, Midlothian (TRWD water through TRA), additional Johnson County SUD		
Bethany WSC	Trinity Aquifer	Keene (BRA SWATS), Johnson County SUD		
Bethesda WSC	Fort Worth (TRWD), Trinity Aquifer	Arlington (TRWD), additional Fort Worth (TRWD), supplemental wells		
Burleson	Fort Worth (TRWD)	None		
Cleburne	Lake Pat Cleburne, BRA Lake Aquilla, BRA Lake Whitney (not yet connected), Trinity Aquifer, Reuse (for Steam Electric Power)	Additional reuse, development of Lake Whitney supply from BRA System Operations		
Godley	Trinity Aquifer	BRA SWATS (possibly through JCSUD)		
Grandview	Woodbine aquifer	BRA SWATS (possibly through JCSUD)		
Johnson County SUD	BRA SWATS, Trinity Aquifer, Mansfield (TRWD)	Temporary overdraft of the Trinity Aquifer in 2010, Grand Prairie (groundwater), additional Mansfield (TRWD)		
Joshua	Johnson County SUD	None		
Keene	BRA SWATS, Trinity Aquifer	Temporary overdraft of the Trinity Aquifer in 2010		
Mansfield	TRWD	None		
Mountain Peak SUD	Trinity Aquifer, Midlothian	Additional Trinity Aquifer (new wells), Woodbine aquifer (new wells)		
Parker WSC	Trinity Aquifer, Files Valley WSC (Aquilla WSD)	BRA SWATS (possibly through Johnson County SUD), supplemental wells in Trinity Aquifer		
Rio Vista	Trinity Aquifer	Temporary overdraft of the Trinity Aquifer in 2010, BRA SWATS (possibly through Johnson County SUD)		
Venus	Midlothian (TRWD), Wood-bine aquifer, Trinity Aquifer	None		
Johnson County Other	Trinity Aquifer, Woodbine aquifer	BRA Main Stem Lake/Reservoir (possibly through JCSUD)		
Johnson County Manufacturing	Cleburne, Trinity Aquifer	Direct Reuse		
Johnson County Steam Electric	Cleburne	Direct Reuse		
Johnson County Mining	Local Supplies, Trinity Aquifer, Cleburne	BRA Main Stem Lake/Reservoir		
Johnson County Irrigation	Local Supplies, Trinity Aquifer	None		
Johnson County Livestock	Local Supplies, Trinity Aquifer	None

Table E-2.
Recommended Water Management Strategies for Johnson County Entities

Water Supplier	Water Management Strategy	Date Assumed	Cost	Supply (acft/yr)
Alvarado	Trinity Wells	2010	\$1,890,000	444
Alvarado	Connection to Midlothian	2010	\$11,140,000	1,121
Pothony WSC	Connection to Keene	2010	\$3,952,000	275
Bethany WSC	Connection to Johnson County SUD	2010	\$4,360,000	336
Bethesda WSC	Additional Connection to Ft Worth	2010	In Progre	ss
beillesua WSC	Connection to Arlington	2020	\$15,494,000	2,803
Burleson	Additional Connection to Ft Worth	Before 2020	\$24,530,000	-
	5 Million Gallons per Day (MGD) Treatment Plant Expansion	2013	\$12,025,000	1
Cloburno	1.9 MGD Lake Whitney Desalination Plant	2015	\$36,910,000	2,129
Cleburne	1.9 MGD Lake Whitney Expansion (3.8 MGD total)	2020	\$23,618,000	2,129
	West Loop Reuse Pipeline	2010	\$8,589,000	3,027
Godley	Connection to SWATS (through JCSUD)	2010	\$3,638,000	224
Grandview	Connection to SWATS (through JCSUD)	2010	\$3,600,000	212
	Connection to Mansfield (6 MGD)	2010	\$24,999,000	6,726
Johnson County SUD	Connection to Grand Prairie*	2020	\$31,003,000	3,363
302	Water Conservation	2010 2010 2010 2010 2010 2010 2010 2020 \$ Before 2020 \$ 2015 \$ 2020 \$ 2010 2010 2010 2010 2010 2010	-	1,910
Mountain Peak	Additional Trinity Wells	2010	\$4,946,000	300
SUD	Additional Woodbine Wells	2010	\$2,282,000	50
Parker WSC	Connection to SWATS (through JCSUD)	2010	\$3,467,000	181
Rio Vista	Connection to Johnson County SUD	2010	\$3,087,000	69
Johnson County Other	Connection to SWATS (through JCSUD)	2010	\$13,827,000	2,326
Note: Grand Prain	rie and Johnson County SUD will share cost of develo	pping this conne	ction. This is tota	ıl cost.

Note: Grand Prairie and Johnson County SUD will share cost of developing this connection. This is total cost. Costs provided above are reported in second quarter 2007 dollars.

Details of Water Management Strategies for Johnson County Municipal Water Users

Alvarado is planning to purchase water from Midlothian, and Bethesda WSC is planning to purchase water from Arlington. Midlothian and Arlington will get raw water for these strategies from TRWD. Midlothian has indicated that they want Alvarado to purchase raw water from TRWD, so Midlothian does not have to commit its limited raw water resources to supply Alvarado. (Since Arlington is one of the TRWD's four primary customers, it has an "all needs met" contract with TRWD, which includes water for its wholesale customers. As a result, Bethesda WSC will probably purchase water directly from Arlington without a raw water contract with TRWD.) The Trinity River Authority (TRA) acts as the contracting agent for TRWD water supplies in Ellis County, and TRWD supports TRA acting in the same capacity for wholesale contracts with Johnson County entities. TRA is agreeable to this arrangement.

Population, water demand, and water management strategies for Johnson County regional and wholesale water providers are provided below for City of Cleburne, JCSUD, and BRA.

Table E-3.
Projected Demand and Contractual Supply for Cleburne

	2010	2020	2030
Existing Customer Demand (acft/yr)			
In-City Municipal Demand	6,244	7,802	9,753
Johnson County Industrial	2,758	4,883	6,148
Johnson County Steam Electric	2,959	2,959	2,959
Johnson County Mining	1,009	673	673
TOTAL DEMAND	12,970	16,317	19,533
Currently Contracted Supplies (acft/yr)			
Lake Pat Cleburne	5,183	5,104	5,025
BRA Lake Aquilla	4,790	4,280	3,770
BRA Lake Whitney	9,700	9,700	9,700
Reuse for Steam Electric	1,344	1,344	1,344
Trinity Aquifer	1,120	1,120	1,120
Conservation	229	515	454
TOTAL CURRENT SUPPLIES	22,366	22,063	21,413
SURPLUS OR SHORTAGE (-)	9,396	5,746	1,880
Recommended Supply Strategies (acft/yr)			
Reuse	2,375	3,058	4,682
BRA System	0	1,020	1,530
TOTAL RECOMMENDED SUPPLY STRATEGIES	2,375	4,078	6,212
TOTAL SUPPLY	24,741	26,141	27,625
SURPLUS WITH RECOMMENDED STRATEGIES	11,771	9,824	8,092

Notes:

- a. Cleburne is going to build a desalination plant and delivery system to use water from Lake Whitney and the BRA system. The supply available from Lake Whitney will increase over time as the treatment plant is expanded to meet the City's needs. The treated water supply from the desalination plant will be less than the raw water supply. It is estimated that approximately 30% of the raw water supply will be discharged as reject water.
- b. The projected industrial, steam electric, and mining demands shown are all higher than assumed in the 2006 Brazos G Regional Water Plan. We recommend that the Johnson County Industrial, Steam Electric, and Mining demands be increased.
- c. The supply from the Trinity Aquifer is for Johnson County Manufacturing. This supply was not included in the 2006 Brazos G Plan because the supplies in the plan were allocated according to use and aquifer availability. The supply indicated in the above table may result in short-term overdrafting of the Trinity Aquifer in excess of the aquifer's availability depending on local pumping conditions. The available Trinity Aquifer supply to Cleburne may be different in the 2011 Plan.

Re:

Region G, Region-Specific Studies Contract for Regional Water Planning between the Texas Water Development Board (TWDB) and the Brazos River Authority (BRA), TWDB Contract No. 0704830692, Draft Final Study Report Comments.

Dear Mr. Ford:

Staff members of TWDB have completed a review of the Draft Final Study Report under TWDB Contract No. 0704830692. As stated in the above-referenced contract, BRA will consider incorporating Draft Final Study Report comments, shown in Attachment 1, as well as other comments received, into the Final Study Report. In accordance with paragraph F, Article III, Section II of the contract, a copy of these TWDB Executive Administrator comments as well as a written summary of how the Draft Final Study Report was revised in response must be included in all the Final Study Report documents, for example, as an appendix.

TWDB looks forward to receiving one (1) electronic copy of all files, one electronic copy of each Final Study Report in Portable Document Format (PDF), and nine (9) bound double-sided copies of each Final Study Report to the TWDB Executive Administrator no later than the contract Final Study Report Deadline (April 30, 2009 for most reports). Please also transfer copies of all data and reports generated by the planning process and used in developing the Final Study Report to the TWDB Executive Administrator no later than the contract Final Study Report Deadline.

As a reminder, if any portion of the Final Study Report is to be included in a 2011 regional water plan it will be reviewed as part of the Initially Prepared Plan for meeting all statutory and agency rule requirements regarding the preparation of regional water plans.

If you have any questions concerning this contract, please contact Matt Nelson, TWDB's designated Contract Manager for this study at (512) 936-0829.

Sincerely,

Dan Hackle Carolyn L. Brittin

Deputy Executive Administrator

Water Resources Planning and Information

Enclosures Attachment 1

c: Matt Nelson, TWDB

Our Mission

To provide leadership, planning, financial assistance, information, and education for the conservation and responsible development of water for Texas.

P.O. Box 13231 • 1700 N. Congress Avenue • Austin, Texas 78711-3231

ATTACHMENT 1

TWDB Contract No. 0704830692

Region G, Region-Specific Studies 1-5:

TWDB Comments on Draft Final Region-Specific Study Reports:

- 1) Updated Drought of Record and Water Quality Implications for Reservoirs Upstream of Possum Kingdom Reservoir
- 2) Groundwater Availability Model of the Edwards-Trinity (Plateau) and Dockum Aquifer in Western Nolan and Eastern Mitchell Counties, Texas
- 3) Regionalization Strategies to Assist Small Water Systems in Meeting New SDWA Requirements
- 4) Brazos G Activities in Support of Region C's Water Supply Study for Ellis, Johnson, Southern Dallas, and Southern Tarrant Counties
- 5) Updated Water Management Strategies for Water User Groups in McLennan County

Region-Specific Study 1: Updated Drought of Record and Water Quality Implications for Reservoirs Upstream of Possum Kingdom Reservoir

- Report does not present newly developed model input datasets developed under Task 1, for example, the raw numerical naturalized flow dataset (including from 1998) through June 2008 as used in the model. Please present these data as appendices in report.
- Page 8, Table 2.1: Please clarify where the rating curves came from for elevation-content calculations.

Region-Specific Study 2: Groundwater Availability Model of the Edwards-Trinity (Plateau) and Dockum Aquifer in Western Nolan and Eastern Mitchell Counties, Texas

- The data discussed on page 12 does not appear to match the data referred to in Appendix
 A. In the second to last paragraph, the report refers to the data showing 4,300 acre-feet of municipal pumpage in year 2005. The data in Appendix A do not appear to support this total. Please correct or clarify the basis of the 4,300 reference in the report.
- 2. Page 12, last paragraph discusses data in Appendix A and states that the total pumping in 2003 was 4,600 acre-feet. The value for 2003 in the Appendix A table however, appears to be 3,823 acre-feet. This paragraph also states the average is 3,240 acft/year, although the data as presented in the Appendix averages 2,851 acre-feet/year. Please correct

- reference or clarify how numbers referred to in text were derived. Also, it appears that the totals for years 2001-2004 and 2007 are off by 1 acre-foot.
- 3. According to Task 1, subtask C in the contract Scope of Work, the report was to "estimate long-term supplies available from the well field." The report does not appear to directly provide estimates of long-term supplies. Please provide information regarding estimated long-term supplies in the report.

Region-Specific Study 3: Regionalization Strategies to Assist Small Water Systems in Meeting New SDWA Requirements

1. Page 58, paragraph 3 states that "the TWDB Regional Water Supply and Wastewater Facilities Planning Program could be used to provide up to 50 % of the cost of a detailed analysis of regionalization opportunities to encourage small water systems to actively consider and begin implementation of a regionalization strategy". Please clarify in the report that "TWDB can pay up to 50% of the study costs (75% in areas which have unemployment rates exceeding the state average by 50% or more and per-capita income is 65% or less than the state average for the last reporting period available)..."

Region-Specific Study 4: Brazos G Activities in Support of Region C's Water Supply Study for Ellis, Johnson, Southern Dallas, and Southern Tarrant Counties

TWDB's acceptance of the final report does not constitute approval of any revised population or water demand projections contained therein. The formal procedure for requesting revised projections is stated in TAC 357.5 (d) (2):

"Before requesting a revision to the population and water demand projections, the regional water planning group shall discuss the issue at a public meeting for which notice has been posted pursuant to the Open Meetings Act in addition to being published on the internet and mailed at least 14 days before the meeting to every person or entity that has requested notice of regional water planning group activities. The public will be able to submit oral or written comment at the meeting and written comments for 14 days following the meeting. The regional water planning group will summarize the public comments received in its request for projection revisions. Within 45 days of receipt of a request from a regional water planning group for revision of population or water demand projections, the executive administrator shall consult with the requesting regional water planning group and respond to their request."

All requested revisions which receive a consensus recommendation from TWDB, the Texas Department of Agriculture, Texas Commission on Environmental Quality, and Texas Parks and Wildlife Department, will then be presented for consideration of Board approval at the next scheduled meeting.

- Task 1 of the contract Scope of Work refers to reviewing recent studies. Please provide a
 general summary of findings regarding recent supply studies and activities in the area
 since the 2006 Brazos G Regional Water Plan was adopted.
- 2. Tasks 1 and 4 of the contract Scope of Work refer to reviews of studies and reviews of population projection estimates. While Section 1.0 of the report summarizes the associated activities performed by date, it does not provide a general summary of the findings of these reviews or copies of or summaries of the comments that were provided by Region G consultant as a result of these reviews. Please provide a summary of findings or copies of written comments resulting from this work, for example, as an appendix in the report.
- 3. The report does not include or make specific reference to the raw population/water demand projections that were provided from individual water providers in the regional study area (e.g. Alvarado, Burleson, JCSUD, Mansfield, and Venus). Please provide copies of these water planning projections that are generally greater than TWDB population and/or water demand projections. If this raw data was included in another available report, please provide a reference.
- 4. Please consider adding clarifying language to the Executive Summary that more clearly sets forth the purpose and content of this specific report and that explains the need for a reader to also review the "Region C Water Supply Study for Johnson, Southern Dallas, and Southern Tarrant Counties". Consider including a copy of the associated Region C study Table of Contents for reference, for example, in an appendix.
- 5. Page B-3: Table B-2 is missing from report. Please include in final report.

Region-Specific Study 5: Updated Water Management Strategies for Water User Groups in McLennan County

 Task 3 of the contract scope of work states that the following sections will be included in the draft and final report: "... purpose of study including how the study supports regional water planning, methodology, results, and recommendations, if applicable." These sections are not present in the draft report. Please include them in the final report.

To: Brazos G Regional Water Planning Group	
From: David Dunn, PE	Project: Brazos G 2011 Regional Water Plan
CC: Trey Buzbee, Brazos River Authority	
Date: April 7, 2009	Job No: 00044257-001

RE: Suggested responses to TWDB comments regarding the five Phase I Reports

On December 29, 2008, HDR submitted to the Texas Water Development Board (TWDB) draft copies of the reports summarizing the five Phase I studies completed pursuant to the 2011 Brazos G Regional Water Plan. On February 20, 2009, the TWDB provided review comments on each draft report. Those review comments are repeated in this memorandum, followed by HDR's suggested response to each comment.

HDR recommends that the Brazos G RWPG accept these suggested responses to the TWDB comments, and direct HDR and the Brazos River Authority to incorporate the responses into the final versions of the reports, and submit the final reports to the TWDB prior to the report submission deadline of April 30, 2009. A copy of the TWDB review comments and the planning group's responses will be included as an appendix to each report.

Region-Specific Study 1: Updated Drought of Record and Water Quality Implications for Reservoirs Upstream of Possum Kingdom Reservoir

1. Report does not present newly developed model input datasets developed under Task 1, for example, the raw numerical naturalized flow dataset (including from 1998) through June 2008 as used in the model. Please present these data as appendices in report.

Suggested Response: The newly developed data sets have been printed and included as an appendix to the report.

2. Page 8, Table 2.1: Please clarify where the rating curves came from for elevation-content calculations.

Suggested Response: The reservoir elevation-area-capacity relations were obtained from the most recent bathymetric survey available for each reservoir. The last paragraph on page 7 has been updated to make the source of the data more clear.

Region-Specific Study 2: Groundwater Availability Model of the Edwards-Trinity (Plateau) and Dockum Aquifer in Western Nolan and Eastern Mitchell Counties, Texas

1. The data discussed on page 12 does not appear to match the data referred to in Appendix A. In the second to last paragraph, the report refers to the data showing 4,300 acre-feet of

municipal pumpage in year 2005. The data in Appendix A do not appear to support this total. Please correct or clarify the basis of the 4,300 reference in the report.

Suggested Response: The data shown in Table A-3 of Appendix A have been corrected.

2. Page 12, last paragraph discusses data in Appendix A and states that the total pumping in 2003 was 4,600 acre-feet. The value for 2003 in the Appendix A table however, appears to be 3,823 acre-feet. This paragraph also states the average is 3,240 acft/year, although the data as presented in the Appendix averages 2,851 acre-feet/year. Please correct reference or clarify how numbers referred to in text were derived. Also, it appears that the totals for years 2001-2004 and 2007 are off by 1 acre-foot.

Suggested Response: The numbers in the text have been corrected.

3. According to Task 1, subtask C in the contract Scope of Work, the report was to "estimate long-term supplies available from the well field." The report does not appear to directly provide estimates of long-term supplies. Please provide information regarding estimated long-term supplies in the report.

Suggested Response: The following text has been added to the report as a final paragraph in <u>Section 7 Water Management Strategy for Sweetwater</u>:

"If a groundwater only strategy is considered, the performance of the current Champion Well Field from 2001-2007 and the groundwater modeling suggests that the Edwards-Trinity and Dockum Aquifers could meet this average demand, which was about 2,850 acft/yr. If the well field was substantially expanded to the south-southwest, the modeling analysis suggests that it could meet the projected demand of 3,900 acft/yr for the planning period."

And the following text has been added to <u>Section 9 Conclusions</u>:

"If a groundwater only strategy is considered, the analysis suggests that the aquifers could meet 2001-2007 average demand of about 2,850 acft/yr. If the well field was substantially expanded to the south-southwest, the analysis suggests that the projected demand of 3,900 acft/yr for the planning period could be met."

Region-Specific Study 3: Regionalization Strategies to Assist Small Water Systems in Meeting New SDWA Requirements

1. Page 58, paragraph 3 states that "the TWDB Regional Water Supply and Wastewater Facilities Planning Program could be used to provide up to 50 % of the cost of a detailed analysis of regionalization opportunities to encourage small water systems to actively consider and begin implementation of a regionalization strategy". Please clarify in the report that "TWDB can pay up to 50% of the study costs (75% in areas which have unemployment rates exceeding the state average by 50% or more and per-capita income is 65% or less than the state average for the last reporting period available)..."

Suggested Response: The following text has been added as the second sentence of paragraph 3 on page 58:

"In some instances, the TWDB can pay for more than 50% of the study costs (75% in areas which have unemployment rates exceeding the state average by 50% or more and per-capita income is 65% or less than the state average for the last reporting period available)."

Region-Specific Study 4: Brazos G Activities in Support of Region C's Water Supply Study for Ellis, Johnson, Southern Dallas, and Southern Tarrant Counties

1. Task 1 of the contract Scope of Work refers to reviewing recent studies. Please provide a general summary of findings regarding recent supply studies and activities in the area since the 2006 Brazos G Regional Water Plan was adopted.

Suggested Response: The following text will be added to Section 1.0:

"A review was conducted of recent water supply studies in the four-county area, with a primary emphasis on Johnson County entities. The overall message from the studies indicates that population and water demand projections are increasing at a faster pace than the Texas Water Development Board (TWDB) projections from the 2006 Plan. The City of Cleburne conducted a study¹ in May 2007 that showed that new industrial development and oil and gas exploration in the area have increased rapidly, which has led to increased water requirements. A study conducted by Johnson County Special Utility District $(JCSUD)^2$ showed substantially higher projected population and water demands in Year 2030 than TWDB estimates. The JCSUD study was used as a basis for recommending population and water demand updates, which show a 37% increase in projected population in Year 2030 and nearly 40% increase in projected Year 2030 water demands as compared to TWDB projections used in the 2006 Brazos G Plan. Since the 2006 Brazos G Plan, Johnson County Fresh Water Supply District No. 1 has merged with JCSUD and is shown accordingly in the Four County Study report. Additional studies in the area were reviewed and considered including: information from the City of Arlington regarding their wholesale water rate study, and a report developed jointly by the Brazos River Authority and Tarrant Regional Water District in April 2004 entitled "Regional Water Supply and Wastewater Service Study for Johnson and Parker County."

2. Tasks 1 and 4 of the contract Scope of Work refer to reviews of studies and reviews of population projection estimates. While Section 1.0 of the report summarizes the associated activities performed by date, it does not provide a general summary of the findings of these reviews or copies of or summaries of the comments that were provided by Region G consultant as a result of these reviews. Please provide a summary of findings or copies of written comments resulting from this work, for example, as an appendix in the report.

.

¹ City of Cleburne and Freese and Nichols, "Cleburne Long-Range Water Supply Study- Draft," May 2007.

² Johnson County Special Utility District and HDR Engineering, Inc, "Evaluation of Additional Water Supplies from the Trinity and Brazos River Basins," December 2006.

Suggested Response: Copies of selected email correspondence with comments provided by Brazos G consultants have been added as Attachment B-1. An interim progress report update with proposed population and water demand projections was provided to the Brazos G RWPG on October 28, 2008 (as described in Section 1.0). A copy of this presentation has been added as Attachment B-2.

In addition, the following text will be added to Section 1:0:

"The population and water demand recommendations were reviewed for consistency with information provided by each of the Johnson County entities. In some cases, historical population and water use information was provided which was used to assess the reasonableness of extrapolating historical trends to future population and water demands projections. Due to the large number of entities over the study area, there were numerous review processes required to ensure that the recommended population and water demand projections used in the study were consistent with current trends that Johnson County entities are experiencing and their local plans. A copy of selected email correspondence from Brazos G consultants with comments and results of their reviews of Region C's interim analyses and reported results is presented in Attachment B-1."

3. The report does not include or make specific reference to the raw population/water demand projections that were provided from individual water providers in the regional study area (e.g. Alvarado, Burleson, JCSUD, Mansfield, and Venus). Please provide copies of these water planning projections that are generally greater than TWDB population and/or water demand projections. If this raw data was included in another available report, please provide a reference.

Suggested Response: The raw population and water demand projections provided by Johnson County water entities will be provided as Attachment A. Text will be added to Section 1.0 to reference Attachment A. For more information regarding how raw population and water demand projections were used to develop recommended projections, please consult Region C's report entitled "Water Supply Study for Ellis County, Johnson County, Southern Dallas County, and Southern Tarrant County."

4. Please consider adding clarifying language to the Executive Summary that more clearly sets forth the purpose and content of this specific report and that explains the need for a reader to also review the "Region C Water Supply Study for Johnson, Southern Dallas, and Southern Tarrant Counties". Consider including a copy of the associated Region C study Table of Contents for reference, for example, in an appendix.

Suggested Response: The purpose and content of the specific report was included in the draft report in the executive summary as follows:

"The purpose of this study is to review recent growth in the study area, make adjustments to population and demand projections to account for the growth, and update the current and future water plans of the water user groups and wholesale water providers in the study area. This study included conducting meetings and compiling survey data provided by water suppliers regarding their current and future water plans, determining revisions to population and demand projections, and developing a water supply plan for the study area. This report describes the

assistance provided by Brazos G to the study effort, and summarizes the information resulting from the study that is pertinent to the Brazos G Area."

The following additional text will be added to the Executive Summary:

"Those reading this summary should also consult the 'Region C Water Supply Study for Ellis County, Johnson County, Southern Dallas County, and Southern Tarrant County,' which provides the full report and results of the Four County study."

5. Page B-3: Table B-2 is missing from report. Please include in final report.

Suggested Response: Table B-2 (which has been relabeled as Table D-2 in response to renumbering attachments) will be included in the final report.

Region-Specific Study 5: Updated Water Management Strategies for Water User Groups in McLennan County

1. Task 3 of the contract scope of work states that the following sections will be included in the draft and final report: "... purpose of study including how the study supports regional water planning, methodology, results, and recommendations, if applicable." These sections are not present in the draft report. Please include them in the final report.

Suggested Response: The organization of the report has been restructured as follows:

<u>Section 1.0 Introduction</u> has been subdivided into <u>Section 1.1 Purpose of Study</u> and <u>Section 1.2 Methodology</u>. The text states how the study supports regional water planning. Sections 2.0 through 5.0 have been made subdivisions 2.1 through 2.4 of a new <u>Section 2.0 Results</u>, while retaining their original text and organization. <u>Section 5.0 Summary</u> has been titled <u>Section 3.0 Summary</u> and <u>Recommendations</u> with two new subdivisions <u>3.1 Summary</u> and <u>3.2 Recommendations</u>, while retaining its original text.
