List of Figures

1.0 Introduction

In Senate Bill 2 of the 77th Texas Legislature, the preparation of an Infrastructure Financing Report was added to the regional planning process. The purpose of the report is to identify the funding needed to implement the water management strategies recommended in the Regional Water Plans. The primary objectives of the report are:

1) Determine the number of Political Subdivisions with identified needs that will be unable to finance their water infrastructure needs;
2) Determine the amount of infrastructure costs in the Regional Water Plans that cannot be financed by the local Political Subdivisions;
3) Determine funding options, such as State funding, that are proposed by the Political Subdivisions to finance water infrastructure costs that cannot be financed locally; and
4) Determine additional roles the RWPGs propose for the State in financing the recommended water supply projects.

A survey of Water User Groups with identified infrastructure needs was conducted, and the results of those surveys are summarized in Section 2.

The Region H Water Planning Group reviewed the current role of the State in financing water supply projects, and makes recommendations for program increases and new initiatives in Section 3.

2.0 Summary of Survey Responses

Surveys were sent to forty-four municipalities and the five major water providers with projected water shortages and anticipated capital costs in the 2001 Region H Water Plan. Of these, 20 surveys were completed and returned. Water User Groups (WUGs) that did not correspond to a single Political Subdivision, such as Census Defined Places and unincorporated areas, were included in the major water provider surveys, based on service area. The responses received are tabulated in Appendix A, and the actual questionnaires are at Appendix B.

In the 2001 Region H Water Plan, $2.58 billion of water supply and infrastructure needs were identified. Of that, $1.04 billion was the estimated cost of new water supply projects and major transmission systems (see Table 2-1). The remaining $1.54 billion was in local infrastructure for water treatment plants, transmission mains, pump stations and storage tanks. The local infrastructure costs were allocated to each municipal WUG in the 2001 Region H Water Plan, and were included in the surveys. The costs of the water supply projects and major transmission lines were not distributed among the municipal WUGs, but the cost of these projects was reflected in the unit cost of water received from these projects.

Table 2-1: Recommended Water Supply and Transmission Systems

Management Strategy	Decade	Yield (acre-feet/year)	Strategy Cost (1999 $)
Allens Creek Reservoir	2020	99,650	$ 157,300,000
Little River Reservoir	2040	129,000	$ 361,065,000
Bedias Reservoir	2030	90,700	$ 132,000,000
Bedias to SJRA Transfer	2030	None	$ 62,340,000
Wastewater Reclamation	2010	90,700	$ 175,498,000
Luce Bayou Transfer	2020	None	$ 84,000,000
Houston/GCWA Transfer	2050	23,000	$ 63,270,000
SJRA/CLCND Contract	2000	30,000	$ 8,250,000
Total			$1,043,723,000

2.1 Municipal Water User Groups

In developing cost estimates for local infrastructure, the Region H Water Plan assumed that facilities would be constructed to meet the ultimate (usually 2050) demand. Because many of these facilities are first needed in 2010, the majority of the facility costs appear in that decade (See Figure 2-1). Adding to the high projected costs in that decade was the requirement to include facility costs for the unincorporated municipal areas within each county. These costs were estimated by determining the average facility costs per acre-foot of water for the discrete municipalities within a county, and then applying that average cost to the needs of the unincorporated areas. This broad method resulted in a facility cost estimate for the unincorporated areas of $1.23 billion (see Figure 2-2).

Figure 2-1: Capital Cost by Decade

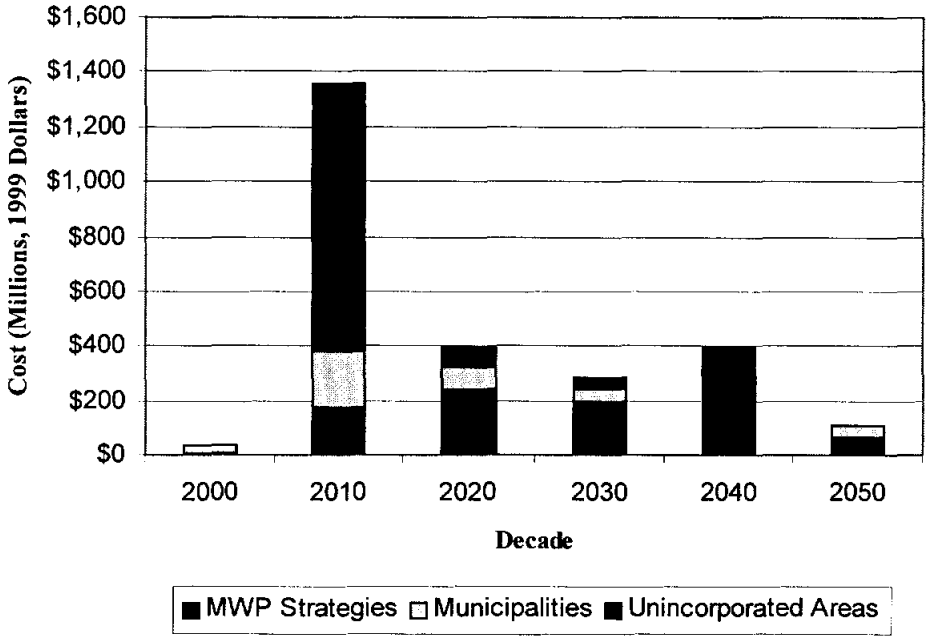

Figure 2-2: Capital Costs by Category

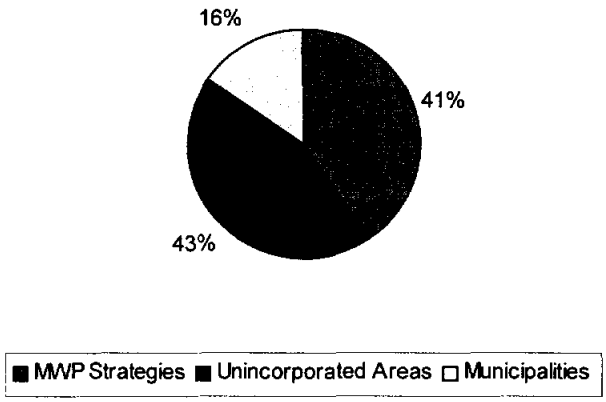

The factor most responsible for the high water infrastructure cost projections in this region is the predominant availability and use of groundwater. The ability to easily develop groundwater wells throughout the region has allowed development to occur at significant distances from surface water sources. As projected water demands surpass the sustainable yield of the Gulf Coast aquifer, communities now face the need to construct long pipelines and treatment facilities. Although some of these facilities were estimated to serve multiple WUGs, there exist many opportunities for individual communities and

water suppliers to provide water more efficiently through regional cooperation and phasing of the surface water conversion.

Maintenance and replacement of existing treatment and transmission systems are not addressed in the Region H cost estimates. However, these are significant and on-going costs, and will impact communities' ability to fund additional infrastructure. These maintenance costs are expected to increase as a percentage of water system budgets as facilities constructed in the mid-20th century reach the end of their design life.

In the 20 survey responses received, seven respondents (35%) anticipated fully funding the infrastructure costs through utility revenues, with some anticipating State participation to defer payment schedules. Eight respondents (40%) anticipated needing state assistance to cover some or all of the estimated infrastructure costs. Three respondents (15%) stated that their current systems were sufficient to meet their projected growth and water demands. Finally, two respondents redirected the surveys to retail water suppliers, who were then contacted but did not respond. The survey results are Tabulated in Appendix A, and summarized in Table 2-2, below.

Table 2-2: Summary of Survey Responses

Category		No. of Entities	Total Estimated Infrastructure Cost (1999 $)	Portion of Cost the Respondents are Unable to Pay (1999 $)
Municipalities	Surveyed**	44	$ 402,564,000	
	Responded*	20	$ 183,379,000	$ 93,780,000
Major Water Providers	Surveyed**	5	$1,043,723,000	
County-Other***	Surveyed**	5	$1,128,908,000	

** Values represent entire user category
* Values represent only responses received
*** County-Other areas included in MWP survey, grouped by service area

Several Political Subdivisions that did not agree with the population and water demand projections applied to them in the regional plan, stating that their community would be built-out below the 2050-population projection. They anticipated their current groundwater source would be adequate to meet their needs. Several other communities did not agree with the timing of infrastructure upgrades, seeing their expansion needs coming later than what is shown in the regional plan.

During the first round of Regional Water Planning, three regional entities were formed that were not addressed in the current Regional Water Plan. These entities are the North Harris County Regional Water Authority, the West Harris County Regional Water Authority and the Mid-Brazoria Regional Water Planning Group. Each of these entities includes incorporated areas and municipal county-other areas. Because of the limitations in the cost estimating methods used for municipal county-other areas, specific project and cost data could not be assembled for the standard survey forms to be prepared. Instead,

more generalized questions were addressed to these entities to determine (1) if state participation is needed to fund their infrastructure needs, and (2) would the entity utilize the state participation program if it were made available for their projects. The entities responded that their infrastructure planning was based on fully funding their additional infrastructure with user rates and fees. Although all expressed an interest in utilizing the state participation program to oversize facilities in anticipation of future growth, none was currently planning on submitting a request.

Surveys were sent to Regional Water Providers to address major water supply projects and the needs of unincorporated municipal areas within their service areas. County governments in this region are not historically responsible for water supply, and therefore were not included in the survey. Due to an error in the survey preparation, these surveys were mailed late and will be included in a letter Addendum to this report.

2.2 Non-Municipal Water User Groups

Non-municipal Water User Groups were not surveyed, since their specific water infrastructure needs were not addressed in the 2001 Regional Water Plan. Water demands were aggregated at the County and Basin level, which precluded the mapping and sizing of pipelines as was used in developing the municipal infrastructure cost projections. It is expected that within the non-municipal water use categories, any local infrastructure will be funded using a combination of the methods outlined below, which come from a review of existing funding programs and information contained in previous water plans.

Manufacturing: Projected water shortages for manufacturing occur due to supply contracts expiring, projected growth exceeding available local supply (groundwater) and, in some counties, regulatory limits reducing the availability of groundwater. It is anticipated that those companies with projected shortages will coordinate directly with the surface water providers identified for any infrastructure needed to bring water to their sites. The funding of this construction may occur in a number of ways. The typical method is for the water provider to construct the distribution system supplying the customers, and pass through the cost in the water rate. State assistance may be requested through the State Loan Program for some projects. A second funding option is for the manufacturer to directly construct the required infrastructure, which would be a site-specific consideration. In areas not currently served by a surface water provider, a private developer may chose to establish a distribution utility, or a public-private partnership may be formed between the water supplier and end user to develop a new system.

Steam Electric Power: Projected shortages in water supply for power were predominantly a due to contracts expiring, which are recommended to be renewed. It is expected that the power plant owners, as a part of any facility upgrades they may make, will include any required water supply intakes and pipelines or contract directly with existing major water providers to obtain the needed additional water.

Mining: Mining is projected to experience water shortages in Brazoria, Harris, Liberty and Montgomery Counties due to limits on the availability of groundwater. It is anticipated that those companies with projected shortages will coordinate directly with the surface water providers identified for any infrastructure needed to bring water to their sites. The cost of this infrastructure is expected to be paid by the private mining entities.

Irrigation: Anticipated infrastructure costs for irrigation are related to the irrigation conservation management strategy, which includes such measures as canal lining, upgrading to more efficient irrigation systems and laser-leveling fields. Individual irrigators would predominantly fund these measures, with assistance from the State through the Agricultural Water Conservation Loan Program. This program requires the funds to be requested through a soil and water conservation district, underground water conservation district or an authorized supplier of water for irrigation, which would then manage the projects locally. Since small irrigators may be unable to assume full financial liability for these improvements, subsidies or grants from the State and/or the water providers may be needed to ensure these improvements are made.

3.0 Policy Recommendations

The Legislature has directed each regional water planning group to propose roles for the State to take in financing the recommended water supply projects. The Region H Water Planning Group has reviewed the existing funding programs and the needs of the region, and offers the following recommendations. Recommendations are grouped by category. Further discussions of each program or policy are provided at Appendix C.

3.1 Recommendations Relating to Direct Financial Assistance Programs

- The State Participation Program will be the most important financing program for water supply projects sized to meet projected long-term demands. Increase the funding of this program as needed to allow development of these water supply projects.
- The State Revolving Fund Programs will remain important to assist some systems in meeting minimum drinking water standards. As infrastructure ages and water quality standards increase, the demand for this assistance will grow. Increase the funding of this program in future decades, and expand the program to include coverage for system capacity increases to meet projected growth for communities.
- The State Loan Program for political subdivisions and water supply corporations offers loans at a cost advantage over many commercial and many public funding options. Some entities will benefit from these loans as they convert from groundwater to surface water supplies. Increase funding of this program to allow financing of near-term infrastructure cost projections.
- Irrigation conservation is an important part of the Region H Water Plan. Individual irrigators will require assistance in upgrading their irrigation systems to increase water efficiency. Provide a mechanism to leverage Federal grant programs by providing the local matching share. Increase funding of the Agricultural Water Conservation loan program, and consider adding a one-time grant or subsidy program to stimulate early adoption of conservation practices by individual irrigators.
- The Regional Water Supply and Wastewater Facilities Planning Program assists political subdivisions with planning grants, allowing small communities to pursue cost-efficient regional solutions. Increase funding of this program in anticipation of upcoming development throughout the state, and expand the program to include the costs for preliminary engineering design and development of detailed engineering cost estimates of recommended facilities.
- The USDA Rural Utilities Service offers Water and Waste Disposal Loans and Grants to rural areas and towns of up to 10,000 people. Certain communities within Texas are specifically targeted for these grants. Support continued and increased funding of this program at the Federal level, and fund the state Rural Water Assistance Fund.

3.2 Policy Recommendations which Indirectly Impact Financing for Water Infrastructure

- Desalination is becoming an attractive management strategy to regions of the State, including Region H, but it is not yet cost-competitive with more traditional water supply projects. Provide research grants for the study of current and upcoming desalination technologies available to wholesale and retail water suppliers. Fund appropriate demonstration facilities to encourage development of new technologies.
- Irrigators cannot generally afford the increased cost of water when new supplies are developed. By reducing demand in a cost-efficient manner, small irrigators may be able to continue farming. Provide increased research grants to study and better develop drought-resistant crop species and efficient irrigation practices.
- The US Army Corps of Engineers (USACE) constructs civil works projects for flood control, navigation and ecosystem restoration. USACE participation in water supply projects is limited by current regulations. Support regulatory changes that will allow USACE to increase water supply storage in new reservoirs that they construct and manage, and investigate other alternatives for increased involvement of USACE in funding water supply projects.
- Under the current Texas Water Code, water rights developed as a result of an interbasin transfer become junior to other water rights granted before the interbasin transfer permit. Interbasin transfers are used throughout Region H and are an important component of the Region H Water Plan. Revise the current law on interbasin transfers to remove this barrier.
- The Region H Water Plan relies upon Advanced Water Conservation to reduce demands. However, realizing advanced conservation savings in unincorporated areas may be difficult, as these practices require management, funding and oversight. Strengthen the statewide conservation programs by developing stronger and more effective funding and enforcement mechanisms, including pricing strategies, down to the lowest water provider, public and private.
- The costs to water users can be reduced if optimally sized regional facilities can be constructed instead of multiple small systems. Several options for forming agreements between political subdivisions exist. Region H supports the forming of regional facilities and encourages the State to remove any impediments to these entities, including restrictions to the use of public/private partnerships. Additionally, the State Participation Program should be made available to these public/private partnerships and to private nonprofit water supply corporations.
- Current levels of funding within the State of Texas bay and estuary programs are insufficient to continue the needed monitoring, study and development of management strategies for the State. Increase funding of bay and estuary programs to (1) increase the body of scientific knowledge about Galveston Bay in general, and (2) establish a body of research for the other estuaries of the state.

- In recent years, lawsuits have been brought against major reservoir operators by plaintiffs in the downstream floodplains. These cases have the potential to increase reservoir insurance costs and reduce available storage capacity, impacting the cost of surface water throughout the state. Develop State legislation clarifying the liability exposure of reservoir operators for passing flood flows through water supply reservoirs.

Appendix B – Survey Questionnaires

WATER INFRASTRUCTURE FINANCING SURVEY

Region Name: **Region H Water Planning Group**

Name of Political Subdivision: _____

Contact Person: _____ Title: _____

Telephone: _____ E-mail: _____

Background: On January 5, 2001, Regional Water Planning Groups (RWPGs) all across the State of Texas formally submitted 16 adopted regional water plans to the Texas Water Development Board (TWDB) per requirements of Senate Bill 1 (75th Texas Legislature). The adopted regional water plans examined and analyzed the water supply needs for all water users in the State. Based on the analysis, the RWPGs identified water management strategies necessary to ensure a sufficient supply of water for the 50-year planning period. The RWPGs also developed preliminary capital cost estimates for each of the strategies recommended in the approved regional water plan.

Senate Bill 2 (77th Texas Legislature) expanded the RWPG's assignment. Senate Bill 2 charges the RWPGs with examining what financial assistance, if any, is needed to implement the water management strategies and projects recommended in the most recently approved regional water plan.

Senate Bill 2 specifically requires that the RWPG report to the TWDB how political subdivisions all across Texas propose to pay for future water infrastructure needs.

The purpose of this survey is to complete this charge with your input.

Please return the completed survey by April 8, 2002 to:

Region H Water Planning Group

WATER INFRASTRUCTURE FINANCING SURVEY

Instructions: For **each** of the recommended strategies in the Region H Regional Water Plan to meet your water needs, please answer the following questions. A separate sheet has been provided for each water management strategy.

Name of Political Subdivision: _____

Water Management Strategy Name: _____

Capital Cost: $ _____

1. Using current utility revenue sources, including implementing necessary rate and tax increases, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above?

   The political subdivision can afford to pay $ _____.

2. If you could access the State Participation Program, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above using current utility revenue sources, including implementing necessary rate and tax increases?

   The political subdivision can afford to pay $ _____.

3. How much of the capital cost is the political subdivision unable to pay for the water management strategy identified above?

   The political subdivision cannot afford to pay $ _____.

4. For the costs the political subdivision cannot pay, what option(s) is proposed? What, if any, state funding sources would the political subdivision consider? (Please use additional sheets, if necessary.)

ATTACHMENT TO
REGION H WATER PLANNING GROUP
WATER INFRASTRUCTURE FINANCING SURVEY

During calendar year 2000 the City of Friendswood contracted with Kltoz Associates, Inc. to assist in preparing a Groundwater Reduction Plan (GRP). The City Council approved this document by resolution in January 2001. This plan was developed in response to changes in the Harris-Galveston Coastal Subsidence District regulations, which as of January 1, 2001, required the City of Friendswood to have sufficient surface water available to supply 80 percent of the amount needed each year. The GRP showed the Subsidence District how and when we would meet the new requirements.

At the time the GRP was developed, the City owned 3 million gallons per day (MGD) capacity in Houston's Southeast Water Purification Plant. This is our sole source of surface water. This plant is being expanded and after completion we will be able to obtain an additional 1.5 MGD of surface water, bringing our capacity to 4.5 MGD. The City Council also approved the purchase of an additional 1.5 MGD capacity in the Southeast Water Purification Plant from other participants, which will give us 6.0 MGD surface water capacity. The City's water wells have a capacity of 8.0 MGD and according to the GRP engineering report, have "a safe long-term yield of 5.0 MGD." This capacity is projected to meet the City's average demands through 2010.

The City issued revenue bonds in each of the past three years to pay for water system improvements and purchase additional capacity in the Southwest Water Purification Plant.

- 1999 - $4,945,000
- 2000 - $3,515,000
- 2001 - $6,100,000

In January of this year the water rate charged to the City's utility customers was adjusted. The rate structure changed from a descending rate to a flat rate. The new rate structure was designed to increase water revenue by 15% to provide adequate resources to operate the water utility system and pay the additional debt service resulting from the bond issues. The second reason for the rate adjustment was to move from a structure that charged customers less as they used more water, to a flat rate that will serve as a conservation measure.

The City is projected to build-out between 2015 and 2020 with a population of approximately 57,400. To meet the additional water supply needs of a population of this size, the City plans to participate in the next expansion of the Southwest Water Purification Plant. This expansion is scheduled to occur in the next 2-3 years and will result in the City receiving additional capacity of 6 MGD, at a cost of approximately $8.9 million. Additional debt will be required to purchase this capacity when it becomes available.

Sent from the Internet (Details)

Ms. Callaway:

In response to the survey that you sent to Mayor Quiroga of Galveston, the City of Galveston is NOT prepared to pay $34.7 M for construction of the Little River Reservoir with the GCWA under its current rate structure or taxing structures.

At this time, we have not identified a funding mechanism from which to pay any of the proposed costs. We would welcome any State dollars that may be available.

The City of Galveston will be working over the next several years to reclaim a large unaccounted for water issue 30%-40% that is primarily due to leakage. This may suffice for Galveston's needs during the planning period, but at this time, it is too early to tell if the strategy will be effective. Meanwhile, the City of Galveston wishes to remain a part of the Little River Project.

Brandon E. Wade, P.E.
Assistant City Manager /
Director of Public Works and Municipal Utilities
City of Galveston

WATER INFRASTRUCTURE FINANCING SURVEY

Instructions: For <u>each</u> of the recommended strategies in the Region H Regional Water Plan to meet your water needs, please answer the following questions. A separate sheet has been provided for each water management strategy.

Name of Political Subdivision: JERSEY VILLAGE

Water Management Strategy Name: NEW CONTRACT WITH HOUSTON

Capital Cost: $ $1,445,000.00

1. Using current utility revenue sources, including implementing necessary rate and tax increases, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above?

   The political subdivision can afford to pay $ PROJECT COMPLETED.

2. If you could access the State Participation Program, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above using current utility revenue sources, including implementing necessary rate and tax increases?

   The political subdivision can afford to pay $ N/A.

3. How much of the capital cost is the political subdivision <u>unable</u> to pay for the water management strategy identified above?

   The political subdivision cannot afford to pay $ N/A.

4. For the costs the political subdivision cannot pay, what option(s) is proposed? What, if any, state funding sources would the political subdivision consider? (Please use additional sheets, if necessary.)

Summary of Recommended Water Management Strategies for:

JERSEY VILLAGE

Political Subdivision	Strategy	Strategy Implementation Date	Total Capital Cost
JERSEY VILLAGE	NEW CONTRACT WITH HOUSTON	2010	$1,445,000.00

Background: On January 5, 2001, Regional Water Planning Groups (RWPGs) all across the State of Texas formally submitted 16 adopted regional water plans to the Texas Water Development Board (TWDB) per requirements of Senate Bill 1 (75th Texas Legislature). The adopted regional water plans examined and analyzed the water supply needs for all water users in the State. Based on the analysis, the RWPGs identified water management strategies necessary to ensure a sufficient supply of water for the 50-year planning period. The RWPGs also developed preliminary capital cost estimates for each of the strategies recommended in the approved regional water plan.

Senate Bill 2 (77th Texas Legislature) expanded the RWPG's assignment. Senate Bill 2 charges the RWPGs with examining what financial assistance, if any, is needed to implement the water management strategies and projects recommended in the most recently approved regional water plan.

Senate Bill 2 specifically requires that the RWPG report to the TWDB how political subdivisions all across Texas propose to pay for future water infrastructure needs.

The purpose of this survey is to complete this charge with your input.

WATER INFRASTRUCTURE FINANCING SURVEY

Instructions: For <u>each</u> of the recommended strategies in the Region H Regional Water Plan to meet your water needs, please answer the following questions. A separate sheet has been provided for each water management strategy.

Name of Political Subdivision: LAKE JACKSON

Water Management Strategy Name: INCREASE EXISTING CONTRACT

Capital Cost: $ $872,000.00

1. Using current utility revenue sources, including implementing necessary rate and tax increases, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above?

   The political subdivision can afford to pay $ See Attached.

2. If you could access the State Participation Program, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above using current utility revenue sources, including implementing necessary rate and tax increases?

   The political subdivision can afford to pay $ See Attached.

3. How much of the capital cost is the political subdivision <u>unable</u> to pay for the water management strategy identified above?

   The political subdivision cannot afford to pay $ See Attached.

4. For the costs the political subdivision cannot pay, what option(s) is proposed? What, if any, state funding sources would the political subdivision consider? (Please use additional sheets, if necessary.)

See Attached

Summary of Recommended Water Management Strategies for:

LAKE JACKSON

Political Subdivision	Strategy	Strategy Implementation Date	Total Capital Cost
LAKE JACKSON	INCREASE EXISTING CONTRACT	2010	$872,000.00

The adopted Region H plan showed that the City of Lake Jackson can meet projected water shortages by increasing our supply contract from Brazosport Water Authority (BWA). According to the plan this would require BWA to acquire more water from the Brazos River Authority (BRA), build a new raw water pump station and transmission line, expand their plant, and for the city to build a new line from BWA to our facilities.

Before the plan was adopted the city's representatives to the planning committee pointed out that the plan did not account for all of our existing well capacity and that we would rely on groundwater rather than more BWA water to meet our needs. The planning committee apparently did not accept this as part of the adopted plan.

The $872,000 represents only the construction cost of a new line from BWA to our facilities. The BWA plant expansion is projected at $30 million and their raw water supply is projected at $8 million.

While we could plug through a calculation using projected water use, the $872,000 capital cost, our portion of funding BWA improvements, and come up with a projected water and sewer rate and then determine if this is acceptable or not. We do not think this exercise has much practical use for anyone. Again, our intention is to supplement our surface water needs with well water – as we do now.

The City's concern with the water plan as it is written is if it becomes the rationale behind future regulation of the groundwater supply that prevents us from using our existing well capacity or expanding it.

If you have any questions, please do not hesitate to contact Craig Nisbett, Public Works Director, at 979-415-2430 or City Manager, William P. Yenne at 979-415-2500.

OAK RIDGE NORTH	NEW CONTRACTS WITH SJRA	2020	$1,680,000.00

WATER INFRASTRUCTURE FINANCING SURVEY

Instructions: For <u>each</u> of the recommended strategies in the Region H Regional Water Plan to meet your water needs, please answer the following questions. A separate sheet has been provided for each water management strategy.

Name of Political Subdivision: PANORAMA VILLAGE

Water Management Strategy Name: NEW CONTRACTS WITH SJRA

Capital Cost: $ $6,883,000.00

1. Using current utility revenue sources, including implementing necessary rate and tax increases, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above?

   The political subdivision can afford to pay $ -0-.

2. If you could access the State Participation Program, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above using current utility revenue sources, including implementing necessary rate and tax increases?

   The political subdivision can afford to pay $ -0-.

3. How much of the capital cost is the political subdivision <u>unable</u> to pay for the water management strategy identified above?

   The political subdivision cannot afford to pay $ 6,883,000.00.

4. For the costs the political subdivision cannot pay, what option(s) is proposed? What, if any, state funding sources would the political subdivision consider? (Please use additional sheets, if necessary.)

See Attached

Summary of Recommended Water Management Strategies for:

PANORAMA VILLAGE

Political Subdivision	Strategy	Strategy Implementation Date	Total Capital Cost
PANORAMA VILLAGE	NEW CONTRACTS WITH SJRA	2020	$6,883,000.00

4. The City of Panorama Village has a current population of approximately 2000 residents and 900 homes. We are approximately 75% built out. Our water supply is all ground water from three (3) wells as follows:

    Water Well No. 1 = 500 gpm capacity
    Water Well No. 2 = 700 gpm capacity
    Water Well No. 3 = 750 gpm capacity

Well No. 3 was placed in operation early this year and brings our daily capacity to 2,808,000 gallons per day. During the last 3 years our maximum daily demand was 1,300,000 gallons or 85% of our capacity from Wells No. 1 and No. 2.

Table C-3: Conveyance and Treatment Facility Costs by Decade lists Panorama Village under the water user group requiring connection by regional provider with a total capacity of $6,883,000. We would make the following comments:

a. We feel we have adequate capacity from our present facilities considering use are presently about 75% build out with little opportunity of annexing adjacent land.
b. In the remote possibility that we would require additional supplies we would pursue working out an Inter Local Agreement with the City of Conroe that has a main line running from I-45 west along League Line road and runs along the south side of Panorama Village and a proposed main line running west from I-45 along FM 830 and the north side of Panorama Village.
c. The City of Panorama Village currently has Water Revenue of $200,000 - $300,000 per year, depending on weather. Out of this must come the cost to operate our plant. The cities Maintenance and Operations budget, excluding Water and Sewer, is $507,732 for the current year and Debt Service is $263,007. Considering our size and revenue source we are not in a position to commit to sharing in the $6,883,000 Total Capital Cost.

Dear Ms. Callaway:

The attached information is submitted as general information for your Water Infrastructure Financing Survey. This small community would be unable to participate at the levels indicated in your proposal. A brief overview of this community's finances, population, and water pumping capacity is provided.

Finally, all water issues concerning Montgomery County cities and MUDs should be addressed to the recently formed Lone Star Ground Water Conservation District. This organization will be formulating a water policy for the entire county.

Respectfully submitted,

Howard L. Kravetz

WATER INFRASTRUCTURE FINANCING SURVEY

Instructions: For **each** of the recommended strategies in the Region H Regional Water Plan to meet your water needs, please answer the following questions. A separate sheet has been provided for each water management strategy.

Name of Political Subdivision: PEARLAND

Water Management Strategy Name: EXTEND EXISTING CONTRACT THROUGH 2050-HARRIS AND BRAZORIA SPLIT (10 MGD)

Capital Cost: $ $2,320,000.00

1. Using current utility revenue sources, including implementing necessary rate and tax increases, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above?

   The political subdivision can afford to pay $ 2,320,000.
   * Requires at least a 10% water rate increase

2. If you could access the State Participation Program, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above using current utility revenue sources, including implementing necessary rate and tax increases?

   The political subdivision can afford to pay $ 2,320,000.

3. How much of the capital cost is the political subdivision unable to pay for the water management strategy identified above?

   The political subdivision cannot afford to pay $ 0.

4. For the costs the political subdivision cannot pay, what option(s) is proposed? What, if any, state funding sources would the political subdivision consider? (Please use additional sheets, if necessary.)

WATER INFRASTRUCTURE FINANCING SURVEY

Instructions: For **each** of the recommended strategies in the Region H Regional Water Plan to meet your water needs, please answer the following questions. A separate sheet has been provided for each water management strategy.

Name of Political Subdivision: RICHMOND

Water Management Strategy Name: NEW CONTRACT

Capital Cost: $ **$15,232,000.00**

1. Using current utility revenue sources, including implementing necessary rate and tax increases, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above?

   The political subdivision can afford to pay $ 3,000,000.00 .

2. If you could access the State Participation Program, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above using current utility revenue sources, including implementing necessary rate and tax increases?

   The political subdivision can afford to pay $ 3,000,000.00 .

3. How much of the capital cost is the political subdivision unable to pay for the water management strategy identified above?

   The political subdivision cannot afford to pay $ 12,232,000.00

4. For the costs the political subdivision cannot pay, what option(s) is proposed? What, if any, state funding sources would the political subdivision consider? (Please use additional sheets, if necessary.)

   The political subdivision would consider all possible options.

WATER INFRASTRUCTURE FINANCING SURVEY

Instructions: For **each** of the recommended strategies in the Region H Regional Water Plan to meet your water needs, please answer the following questions. A separate sheet has been provided for each water management strategy.

Name of Political Subdivision: RICHWOOD

Water Management Strategy Name: INCREASE EXISTING CONTRACT

Capital Cost: $ **$4,333,000.00**

1. Using current utility revenue sources, including implementing necessary rate and tax increases, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above?

   The political subdivision can afford to pay $ _____.

2. If you could access the State Participation Program, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above using current utility revenue sources, including implementing necessary rate and tax increases?

   The political subdivision can afford to pay $ _____.

3. How much of the capital cost is the political subdivision unable to pay for the water management strategy identified above?

   The political subdivision cannot afford to pay $ _____.

4. For the costs the political subdivision cannot pay, what option(s) is proposed? What, if any, state funding sources would the political subdivision consider? (Please use additional sheets, if necessary.)

The City of Richwood recently drilled two new wells and increased our storage capacity. Based on our growth rate over the past 30 years, our current capacity should be sufficient for at least 40 years.

WATER INFRASTRUCTURE FINANCING SURVEY

Instructions: For **each** of the recommended strategies in the Region H Regional Water Plan to meet your water needs, please answer the following questions. A separate sheet has been provided for each water management strategy.

Name of Political Subdivision: ROSENBERG

The RWPGs also developed preliminary capital cost estimates for each of the strategies recommended in the approved regional water plan.

Senate Bill 2 (77th Texas Legislature) expanded the RWPG's assignment. Senate Bill 2 charges the RWPGs with examining what financial assistance, if any, is needed to implement the water management strategies and projects recommended in the most recently approved regional water plan.

Senate Bill 2 specifically requires that the RWPG report to the TWDB how political subdivisions all across Texas propose to pay for future water infrastructure needs.

The purpose of this survey is to complete this charge with your input.

Please return the completed survey by April 8, 2002 to:

Regional Water Authority – Telephonic Survey Record

Entity: West Harris County Regional Water Authority
POC: Mr. Dan Sallee, President
Telephone: 713-961-8500
Survey date: May 29, 2002

1. We do not have an infrastructure estimate prepared for your regional authority. As you develop your plan, what percentage do you expect to fund from user rates and taxes, and what percentage do you expect to get from state or external funding sources?

Summary of response: The WHCRWA is working on the assumption that local funding will be used to meet 100% of the infrastructure costs. The target user rate is currently $0.95 per thousand gallons for all customers.

2. If you could access the state participation program, what percentage of infrastructure costs would you expect the state to provide? Under the state participation program, a portion of the facility would be owned by the state until the customer base grows enough to fully utilize the facility. The state is then repaid through revenues.

Summary of response: State participation for oversized facilities is not currently being considered as a funding option, but may be considered as oversized transmission lines are constructed from the Jersey Village Pump Station.

Regional Water Authority – Telephonic Survey Record

Entity: Mid-Brazoria Regional Water Planning Group
POC: Mr. Wayne Szabo, Alvin Director of Public Works
Telephone: 281-388-4200
Survey date: May 29, 2002

1. We do not have an infrastructure estimate prepared for your regional authority. As you develop your plan, what percentage do you expect to fund from user rates and taxes, and what percentage do you expect to get from state or external funding sources?

Summary of response: After the initial Mid-Brazoria RWPG Study completed by TC&B in 2001, the group became inactive. The two largest cities, Pearland and Angelton, fell out of the group to pursue independent management strategies.
The City of Alvin anticipates self-funding their internal infrastructure requirements, with possible assistance only coming from the TWDB loan programs. The City is planning a new well, which will provide increased GW capacity to meet their anticipated 2030 demands.
No regional water facility construction is anticipated for the MBRWPG. Alvin and the other Mid-Brazoria members are currently discussing participation in the GCWA regional plant.

2. If you could access the state participation program, what percentage of infrastructure costs would you expect the state to provide? Under the state participation program, a portion of the facility would be owned by the state until the customer base grows enough to fully utilize the facility. The state is then repaid through revenues.

Summary of response: State participation is not an anticipated need for the group at this time. If needed in the future, it is not expected that the state would fund more than 50% of a facility cost.

Regional Water Authority – Telephonic Survey Record

Entity: North Harris County Regional Water Authority
POC: Mr. Ed Shackelford, General Manager
Telephone: 281-440-3924
Survey date: attempted May 29 and 31, 2002

1. We do not have an infrastructure estimate prepared for your regional authority. As you develop your plan, what percentage do you expect to fund from user rates and taxes, and what percentage do you expect to get from state or external funding sources?

Summary of response:

2. If you could access the state participation program, what percentage of infrastructure costs would you expect the state to provide? Under the state participation program, a portion of the facility would be owned by the state until the customer base grows enough to fully utilize the facility. The state is then repaid through revenues.

Summary of response:

Appendix C – Policy Discussions

In the 2001 Region H Water Plan, nine recommendations were made to the Legislature regarding policies and programs that directly or indirectly funded water projects and water infrastructure. These recommendations included:

- Revise Chapter 297.73 of the Texas Water Code to exempt from cancellation those water rights that have not been used in whole or in part for 10 years.
- Adopt regulations to exempt from cancellation any water rights of project sponsors, whose water rights were developed as a result of financing a water supply project.
- Remove barriers to interbasin transfers of water.
- Establish funding for continuing the Bays and Estuaries programs of state resource agencies and for additional monitoring and research to develop strategies to meet freshwater inflow needs.
- Establish financing mechanisms for development of new water supply projects identified within the adopted regional water plans.
- Continue and expand funding of the State of Texas Groundwater Availability Modeling effort.
- Establish funding for agricultural research into the area of efficient irrigation practices.
- Establish a research and development program for desalination with appropriate financial incentives for desalination project implementation.
- Address and improve water conservation activities in the state.

The first two recommendations were acted on during the 79th State Legislature. Water rights for projects developed to meet identified future needs are now exempted from cancellation. Those recommendations that have not been acted on are included in the discussions that follow.

Existing state and federal programs for funding water supply and infrastructure were reviewed for their applicability to the Region H Water Plan. Recommendations generally fell into two categories: those addressing direct assistance programs (loans and grants), and those addressing indirect actions that impact water infrastructure financing.

The program and policy areas considered are discussed on the following pages. The recommendations are summarized in Section 3 of the Report.

C.1 Program / Policy Item: State Participation Program for regional water and wastewater projects

Administering Agency: TWDB

Discussion: This program enables the Water Development Board to assume a temporary ownership interest in a regional project when the local sponsors are unable to assume debt for an optimally sized facility. Payments on the funds provided by the State are deferred until a customer base grows into the capacity it funded. The deferred interest payments do not accrue additional interest. By funding up to 50% of a project, the program helps the local sponsors optimize facility sizes and avoid later expansions and replacements.

This program will be extremely important for the development of the recommended water management strategies, as well as for water treatment and distribution systems. Large projects, particularly reservoirs, must be developed in anticipation of future demands due to the long periods of time required for planning, permitting, property acquisition and construction. For example, Bedias Reservoir, which will require a transmission system as well as the reservoir iteself, is estimated to cost $194.3 million. The current customer base cannot support this high cost. The Bureau of Reclamation no longer funds the development of new water supply reservoirs and this project would not qualify for other federal funding. Therefore, the State Participation program is one of the few programs available to assist local sponsors with this water management strategy. Other reservoir projects within Region H could also experience similar financing issues.

The State Participation Program will also be important during the expansion of surface water service into areas affected by subsidence. As areas develop and implement Groundwater Reduction Plans, it is expected that communities will develop plans for regional treatment and distribution systems to reduce costs. State participation in these facilities will allow them to be optimally sized at their inception. The State Participation Program offers the important advantage of reducing the unit costs for water service for both existing and future water users of the optimally sized facility.

Policy Recommendation: Increase funding of the State Participation Program as needed to allow development of these water supply projects.

C.2 Program / Policy Item: State Revolving Fund Programs (Drinking Water State Revolving Fund and Clean Water State Revolving Fund)

Administering Agency: TWDB

Discussion: These programs provide loans at subsidized interest rates for the construction of water treatment and distribution systems and for source water protection (DWSRF) and for wastewater collection and treatment systems (CWSRF). As the loans are paid off, the TWDB uses the funds to make new loans (thus the name Revolving Fund). State funds for the program receive a federal match through the Environmental Protection Agency. These loans are intended for projects to bring existing systems into compliance with rules and regulations, and are available to political subdivisions, water supply corporations and privately-owned water systems. Applications are collected at the beginning of each year, given a priority ranking, and funded to the extent possible. Projects not funded in a given year may carry forward into the next year's ranking.

These programs are important in that they assist sub-standard water systems in attaining the minimum water quality mandated by Federal and State regulations, but they are not intended to fund system expansions due to projected growth. However, these programs may apply to individual systems in the Region experiencing water quality declines, or to those systems affected by the changed standard for Arsenic. The SRF Fund may also provide assistance to water providers with aging treatment systems and transmission lines.

Policy Recommendation: Increase the funding of this program in future decades, and expand the program to include coverage for system capacity increases to meet projected growth for communities.

C.3 Program / Policy Item: State Loan Program

Administering Agency: TWDB

Discussion: The State Loan Program provides loans to Political Subdivisions and Water Supply Corporations for water, wastewater, flood control and municipal solid waste projects. Payments are not deferred in this program as they are under the State Participation Program, and the interest rates are not subsidized as they are in the Revolving Fund Programs. These loans are available for both local projects and for the local sponsors of regional projects. Acquisition and construction of water treatment and distribution systems are eligible for funding. Loans are made on a first come, first served basis.

This program will be heavily utilized in groundwater-served areas introducing surface water to meet current and projected demands. The ready availability of groundwater across the region has allowed development to occur outside existing surface water service areas. As the limits of available groundwater are reached (sustainable yields and/or regulatory limits), surface water treatment and transmission systems must be constructed to meet future demands. The costs are significant in that they are required in a short time span, instead of initiated and expanded over time as they are in areas originally served by surface water. Where local rate payers cannot afford to directly pay for transition costs, State loans offer a significant cost advantage over most commercial and many public funding options, using the State's high bond rating rather than the rating of the local sponsor.

Policy Recommendation: Increase funding of this program to meet near-term infrastructure cost projections.

C.4 Program / Policy Item: Agricultural Water Conservation Loan Program

Administering Agency: TWDB

Discussion: This program provides loans to soil and water conservation districts, underground water conservation districts and districts authorized to supply water for irrigation. These districts may further lend the funds to private individuals for equipment and materials, labor, preparation and installation costs to improve water-use efficiency related to irrigation of their private lands. There is also a grant program for equipment purchases by eligible districts for the measurement and evaluation of irrigation systems and agricultural water conservation practices, and for efficient irrigation and conservation demonstration projects, among others. However, these grants are not available to individual irrigators. Similar Federal loan and grant programs are available, but require a 25% to 50% local match.

In the Region H Water Plan, irrigation conservation is a recommended strategy in three counties (Brazoria, Fort Bend, and Waller), and is extremely important in Brazoria County where the reductions in irrigation are projected to allow reallocation of supply to meet manufacturing demands. As it is unlikely that manufacturers will seek out and fund irrigation conservation projects, the task of encouraging conservation will fall to the wholesale water providers and those government entities with jurisdiction in those counties. Even with Agricultural Water Conservation Loan Program assistance, irrigators will be slow to invest in water-conserving equipment until water rates increase, making it economically advantageous to do so. The difficulty increases in areas where groundwater is the primary supply source for irrigation.

Eligible districts will need to act as conservation brokers, identifying those irrigators with the potential to reduce water demand through equipment improvements, and matching them with available loans. By reducing usage in this manner, water suppliers will be able to provide the saved portion of their supply to new customers. To assist with the immediate adoption of these improved conservation practices, a one-time grant or subsidy program for water-efficient equipment purchases may help by reducing the loans amounts required by each irrigator. If the requirements of an existing Federal loan or grant program could be met, the State could provide all or part of the local matching share. Since the methods used by irrigators vary across the state, such a program would need to be flexible, with local oversight provided by those districts currently eligible for the Agricultural Water Conservation Loan Program. Consistency with the applicable Regional Water Plan may be included as a prerequisite for this program, as it is for other State grants and loans.

Policy Recommendation: Provide a mechanism to leverage Federal grant programs by providing the local matching share. Increase funding of this loan program and consider adding a one-time grant or subsidy component to stimulate early adoption of conservation practices by individual irrigators.

C.5 Program / Policy Item: Regional Water Supply and Wastewater Facilities Planning Program

Administering Agency: TWDB

Discussion: This program provides planning grants to Political Subdivisions for studies and analyses to determine feasible alternatives for regional water supply and wastewater facility needs. The planning must include more than one service area or political subdivision to be considered regional. Grants are generally limited to 50% of the total cost, and cannot be applied to the preparation of state and federal permits, administrative or legal proceedings of regulatory agencies, or the preparation of engineering plans and specifications.

This grant program can assist in planning for local areas, particularly the unincorporated areas of each county. Local sponsors investigating the best means to serve their populations may join with neighboring communities and water providers and request a planning grant, thus reducing their individual planning costs. Determination of the optimal institutional arrangement between political subdivisions is one of the eligible study areas under this program. Should a regional facility prove to be the best solution for the group, they may elect to pursue additional support from the State Loan and Participation programs.

One limitation of the program is that it cannot be applied to the detailed facility planning or preliminary engineering design of the proposed facility. These early engineering phase costs can represent as much as 30% of the cost of the facility, and generally must be completed before accurate financial requirements can be defined. Inclusion of these costs in either the planning grant or pre-project loan programs would better help these small communities develop the projects they need.

Policy Recommendation: Increase funding of this program in anticipation of upcoming development throughout the state, and expand the program to include the preliminary engineering design costs for recommended facilities.

C.6 Program / Policy Item: Water and Waste Disposal Loans and Grants

Administering Agency: USDA Rural Utilities Service

Discussion: This Federal program provides loans and grants in rural areas and communities of up to 10,000 people for water, wastewater, storm water and municipal solid waste projects. The program is intended for communities that cannot obtain commercial loans at reasonable rates. Loans are made at or below market rates, depending upon the eligibility of the recipient. Grants can cover up to 75% of project costs when required to reduce user costs to a reasonable level. A separate program of Emergency Community Water Assistance Grants (up to $500,000 per project) is also available to communities experiencing rapid declines in water quality or quantity.

This program is similar to the state loan and revolving fund programs. It offers another option to small communities and rural areas unable to finance required infrastructure without assistance. However, this is a nationwide program, and the competition for available funds is correspondingly greater. Colonias and border areas are specifically identified as target areas for the grant portion of this program, and it is therefore in the State's interest to support its continued funding.

The TWDB was recently authorized by the 77th Texas legislature to establish a similar program at the state level. The Rural Water Assistance Fund will provide low-interest loans to municipalities, water districts and non-profit water supply corporations. The program is still under development and has not yet been funded.

Policy Recommendation: Support continued and increased funding of this program at the Federal level, and fund the state Rural Water Assistance Fund.

C.7 Program / Policy Item: Water Research Program - Desalination

Administering Agency: TWDB

Discussion: The Texas Water Development Board offers research grants to individuals or political subdivisions for water research on topics published in the Board's Request for Proposals. Eligible topics include product and process development.

In the Region H Water Plan, one recommendation to the legislature is to establish a research and development program for desalination, with appropriate financial incentives for desalination project implementation. This recommendation was based on the evaluation of a desalination water management strategy that was not cost-competitive with more traditional water supply projects in this region. Four Planning Regions recommended desalination as a management strategy. If desalination can be made more cost effective than constructing new reservoirs, brackish groundwater in coastal areas can be used to supply a large portion of this Region as well.

While the Water Research Program is not structured to fund demonstration plants or subsidize private developers, it does allow the State to begin the study of desalination and assemble a body of guidance documents for political subdivisions wishing to further investigate this strategy. An initial study might be added at the next research funding cycle.

Policy Recommendation: Provide research grants for the study of current and upcoming desalination technologies available to wholesale and retail water suppliers. Fund appropriate demonstration facilities to encourage development of new technologies.

C.8 Program / Policy Item: Water Research Program - Agriculture

Administering Agency: TWDB

Discussion: The Texas Water Development Board offers research grants to individuals or political subdivisions for water research on topics published in the Board's Request for Proposals. Eligible topics include product and process development.

In the Region H Water Plan, one recommendation to the legislature is to establish funding for agricultural research in the areas of efficient irrigation practices and the development of water-efficient and drought-resistant crop and species. Irrigators cannot generally afford the increased cost of water when new supplies are developed in today's market. By reducing demand in a cost-efficient manner, small irrigators may be able to continue farming. This is another potential topic for the Water Research Program.

Policy Recommendation: Provide increased research grants to study and better develop drought-resistant crop species and efficient irrigation practices.

C.9 Program / Policy Item: Federal Civil Works projects

Administering Agency: U.S. Army Corps of Engineers

Discussion: The U.S. Army Corps of Engineers (USACE) builds and operates dams and reservoirs for flood control purposes under its Civil Works program. Congress authorizes funding on a project by project basis. Under current regulations, storage in these reservoirs may be used for present and future municipal and industrial water supply, but that portion of the project must be funded by a non-Federal agency. Also, only 30% of the M&I water storage may be allocated to future needs. The balance must supply existing water users, as the repayment schedule for non-Federal costs is capped at 30 years. USACE is also authorized to fund projects for navigation, water quality improvement and ecosystem restoration.

As a result of the first round of Regional Water Planning, the Texas Congressional Delegation requested a study on the potential for federal assistance with water supply in Texas. The Fort Worth District recently published the Texas Water Allocation Assessment Report, which identifies those projects that USACE might participate in. Within Region H, only Bedias Reservoir might receive USACE funding if the scope of the project were modified to include flood control. Also discussed were potential modifications to existing reservoirs to increase water supply yields (these modifications are generally limited to a 15% increase in storage). A saltwater barrier to improve water quality in the Brazos River was also identified as a potential project. USACE also has the ability to provide planning assistance to states for regional water supply studies, particularly studies crossing state and international boundaries.

Limitations for USACE assistance with water supply projects are (1) current policy preventing the USACE from participating in single–purpose water supply projects, (2) USACE inability to share the cost of water supply projects, and (3) the time required to move appropriations actions through the federal government.. The Texas Congressional Delegation could pursue changes to the governing regulations to allow participation in water supply projects, or to increase the percentage of water supply storage for future use allowed in USACE projects. However, USACE civil works projects are authorized individually by Congress. If the project sponsor desires USACE assistance, an exception permitting that assistance might be authorized in the same appropriation bill. The latter option requires the sponsor to have a project champion in Congress.

Policy Recommendation: Support regulatory changes that will allow USACE to increase water supply storage in new reservoirs which they construct and manage, and investigate other alternatives for increased involvement by USACE in funding water supply projects.

C.10 Program / Policy Item: Junior Water Rights Provision

Administering Agency: TNRCC

Discussion: Under the current Texas Water Code, water rights developed as a result of an interbasin transfer become junior to other water rights granted before the interbasin transfer permit. The effect of this change is to make obtaining a permit for interbasin transfer significantly more problematic than it was under prior law and thus discourages the use of interbasin transfers for water supply.

In the Region H Water Plan, one recommendation to the Legislature is to revise the current law on interbasin transfers and remove the unnecessary and counterproductive barriers to such transfers that now exist. This recommendation is based on the following reasons: (1) Current supplies greatly exceed projected demands in some basins, and the supplies already developed in those basins can only be used via interbasin transfers; (2) Interbasin transfers have been used extensively in Texas and are an important part of the state and region current water supply; and (3) Regional water supply plans for major metropolitan areas in Texas (Dallas-Fort Worth and San Antonio) rely on interbasin transfers as a key component of their plans.

Regional water providers still need to pursue interbasin transfers as cost-effective means of meeting projected demands. Current junior water rights provisions make such transfers more costly and thus more difficult to finance, as the reliability of the water rights directly influences the financial risk of the project. This may result in increased reliance on State funding of grant and subsidy programs, or force the local sponsors to pursue more expensive projects that can receive financing.

Policy Recommendation: Revise the current law on interbasin transfers and remove this barrier.

C.11 Program / Policy Item: Water Conservation

Administering Agency: TNRCC

Discussion: The need to conserve water and reduce demand is recognized by the State as a necessary and economical alternative to developing new sources of water supply. Formal water conservation plans are now required for all holders of existing permits, certified filing or certificate of adjudication for surface water in the amounts of 1,000 acre-feet per year or more for municipal, industrial, and other non-industrial use, and for 10,000 acre-feet per year or more for irrigation. Water Conservation Plans are not required for groundwater supply systems or smaller surface water systems, but are required as a condition for funding under several of the TWDB loan and grant programs. Currently, plans are required to include conservation goals, metering methods, public education, non-promotional rate structures and implementation and enforcement methods.

In the Region H Water Plan, one recommendation to the Legislature is to address and improve water conservation activities in the state. Advanced water conservation is expected to reduce demands in Region H by 30,563 acre-feet per year in 2050. Achieving advanced conservation savings in unincorporated areas may be difficult, however, since these practices require some management, funding and oversight, and there is no central agency established to provide this effort in those areas. A regional means of establishing goals and monitoring progress is needed. Once regional programs are established, economies of scale can be realized in the areas of public education and progress monitoring.

Policy Recommendation: Strengthen the statewide conservation programs by developing stronger and more effective funding and enforcement mechanisms, including pricing strategies, down to the lowest water provider, public and private.

C.12 Program / Policy Item: Regionalization

Administering Agency: None – Market Factors

Discussion: As communities assess the growing costs of water infrastructure, economies of scale can be realized by combining the needs of water user groups into larger, more efficient water supply, treatment and distribution facilities. Regional facilities offer interconnections between existing systems, which can increase overall reliability. The individual system connections to these systems can be phased over time to meet regional demands with less impact on individual systems than each individually trying to expand. In areas where groundwater limits are being reached, regional groups can identify areas where surface water supply is most needed, and allow other areas to remain on groundwater systems. Sharing costs across a wide customer base keeps rates comparable between service areas.

A range of cooperative options exists, including formation of regional authorities, inter-local agreements, public-private partnerships, local government corporations and public contracting with a private regional supplier. The optimal arrangement between political subdivisions depends upon the specific project and the goals of the parties. Partnerships with private investors through public-private partnerships and direct contracting with privately-owned facilities offer an advantage of using private financing to meet part of the initial planning and construction costs. The regulations governing these partnerships must protect the public represented by the partnership, but if too restrictive, may prevent the partnership from realizing potential cost savings though the use of private-sector procurement and construction practices.

Consideration should be given to reducing procurement restrictions for Local Government Corporations to encourage the pooling of resources for funding regional projects. Also, existing assistance programs should remain available when political subdivisions enter into public/public or public/private partnerships.

Policy Recommendation: Region H supports the forming of regional partnerships and encourages the State to allow them the greatest possible latitude for financing in their governing regulations. Additionally, the State Participation Program should be made available to these public/private partnerships and to private nonprofit water supply corporations.

C.14 Program / Policy Item: State Bays and Estuary Programs

Administering Agency: TNRCC

Discussion: The Galveston Bay Estuary Program is established under the EPA's National Estuaries Program. Galveston Bay Implementation Grants are provided by the TNRCC for projects that implement action items found in "The Galveston Bay Plan." Actions outlined in The Galveston Bay Plan include habitat protection, species population protection, public health protection, freshwater inflow and bay circulation, spills/dumping, shoreline management, water and sediment quality, non-point sources of pollution, point sources of pollution, research, public participation and education, and the Galveston Bay regional monitoring program. Funding for the Grant Program is limited.

One of the recommendations to the legislature in the Region H Water Plan is to establish funding for continuing the bay and estuary programs of state resource agencies and for additional monitoring and research to develop strategies to meet freshwater inflow needs. Galveston Bay is a unique resource that is a vital part of the Region H economy. Current levels of funding for programs within the State of Texas related to bays and estuaries are insufficient to provide the needed monitoring, analysis and development of management strategies for these significant resources.

In-stream flow requirements and freshwater inflow requirements for estuaries are now required considerations in new water rights and water supply projects. These target flows must therefore be appropriate, since they will affect operational changes for existing reservoirs and the permitting and cost of any future reservoirs. Although Region H is focused upon the Galveston Bay, the same body of scientific knowledge must be developed for Sabine Lake, Matagorda Bay and the other bays and estuaries in the State of Texas.

Policy Recommendation: Increase funding of the programs which impact research related to the bays and estuaries in order to (1) increase the body of scientific knowledge about Galveston Bay in general, and (2) establish a body of research for the other estuaries of the state.

C.14 Program / Policy Item: Flood Litigation

Administering Agency: Major Water Providers

Discussion: Flood control reservoirs are generally drawn down at the beginning of the annual wet season so that when large rain events occur, the runoff may be captured and later released more slowly into the receiving stream. These reservoirs therefor reduce downstream flood levels and prevent inundation in low areas. In contrast, water supply reservoirs are operated to capture and retain as much streamflow as allowable under their permits, in order to have supply available during periods of high demand. This practice results in less available storage volume to capture runoff during major storms. When a major storm event occurs upstream or above a water supply reservoir, the reservoir operator must sometimes release flood flows during and after the event to prevent flooding upstream of the reservoir or to prevent damage to the dam and other facilities associated with the reservoir. This flood flow can contribute to downstream flooding, but with most reservoirs, actually reduces the amount of flooding which would have occurred had the reservoir not been constructed.

In recent years, plaintiffs with property in the downstream floodplains have brought multiple lawsuits against major water supply reservoir operators. Some recent court decisions have held the operators liable for damages to the downstream properties. Most of these cases are still under appeal by reservoir operators. If the appeals are not successful, this will force insurance rates for these entities to rise and operational changes to occur that may result in less available storage for periods of need. The net affect to water users will be an increase in the cost of surface water throughout the state.

Policy Recommendation: Consider State legislation clarifying the liability exposure of reservoir operators for passing storm flows through water supply reservoirs.

Appendix E – Comments Received

The following comments on the Draft Infrastructure Financing Report were received during the Public Meeting portion of the Region H Water Planning Group meeting held May 1, 2002.

Speaker: Ken Kramer, Sierra Club

Comments: Mr. Kramer pointed out that the review period for this report was too short, and additional time is needed. He stated that the survey questions were difficult to answer as worded, and therefore the validity of the numeric totals should be addressed in the text. Mr. Kramer stated that some of the policy recommendations may require additional thought and consideration, and the RHWPG may wish to hold them out of this report and submit them at a later time. He recommended that specific improvements to the Agricultural Water Conservation Program be considered and included. He also asked that the wording on the Junior Water Rights provision be edited to make it clear that only that provision is recommended for removal. Finally, he pointed out that the policy recommendations in Section 3 of the report are not in the same order as they appear in Appendix C, which made it difficult for the reader.

Responses: The final version of the report will not be submitted until June 1, 2002, and comments may be submitted during the review period. The RHWPG acknowledged the confusion in answering the surveys. The RHWPG discussed all of the recommendations in the draft report, and decided to withdraw one and clarify several others. Appendix C was reordered to correct the discrepancy in sequencing.

The attached letter commenting on the draft report was received from the Texas Water Development Board. The responses are listed below, by comment number.

1. Table A4 will be added to Appendix A of the IFR to document follow-up efforts with water providers. Due to an error in the survey preparation, these surveys were mailed late and will be included in a letter Addendum to this report.

2. County Aggregated Water Use Categories (non-municipal uses) were addressed collectively based on information in the State Water Plan, existing studies and existing funding program information. Separate surveys were not prepared for non-municipal WUGs with needs. The text of the report will be clarified to reflect this.

3. Major water providers were surveyed to address County-Other Water User Groups with needs within their service areas. The follow-up documentation will be included in Table A4.

4. Major water providers were surveyed to address County-Other Water User Groups with needs within their service areas. Table A1 in Appendix A will be updated and reissued in the addendum.

5. Because of the limitations of the Municipal County-Other cost estimating used in the first round of water planning, meaningful cost data could not be compiled to accompany a formal survey. The three regional WUGs were informally surveyed telephonically. Their responses have been added to Appendices A and B.

TEXAS WATER DEVELOPMENT BOARD

May 21, 2002

Mr. Jim Adams, P.E.
San Jacinto River Authority
P.O. Box 329
Conroe, Texas 77305-0329

RE: Regional Water Planning Grant Contract Between the San Jacinto River Authority (SJRA) and the Texas Water Development Board (Board), Contract No. 2002-483-434, Review of Draft Final Reports Entitled "Region H Water Planning Group Infrastructure Financing Report"

Dear Mr. Adams:

Staff members of the Texas Water Development Board have completed a review of the draft report under TWDB Contract No. 2002-483-434. As stated in the above referenced contract, the SJRA will consider incorporating comments from the EXECUTIVE ADMINISTRATOR shown in Attachment 1 and other commentors on the draft final report into a final report. The SJRA must include a copy of the EXECUTIVE ADMINISTRATOR's comments in the final report.

The Board looks forward to receiving one (1) electronic copy, one (1) unbound single-sided camera-ready original, and nine (9) bound double-sided copies of the final report on this planning project.

Please contact Ernest Rebuck, Ph.D., P.E. at (512) 936-2317 if you have any questions about the Board's comments.

Sincerely,

William F. Mullican, III
Deputy Executive Administrator
Office of Planning

TWDB COMMENTS ON THE DRAFT REIGON H WATER PLANNING GROUP INFRASTRUCTURE FINANCING REPORT

1. Please provide documentation of follow-up (minimum of two efforts) for Major Water Providers with Needs. Include date of contact, method of contact, person contacted, and name of Major Water Provider.
2. Please provide documentation of the process used for the responses for the County Aggregated Water Uses category.
3. Please provide documentation of follow-up (minimum of two efforts) for County-Other Water User Groups with Needs. Include date of contact, method of contact, person contacted, and name of political subdivision.
4. Please provide documentation of the process used for the responses for the County-Other Water User Groups with Needs category.
5. The following task effort under Task 1 of the scope of work was not completed: Prepare background information for the three future WUG's (the North Harris county Regional Water Authority, the West Harris County Regional Water Authority, and the Mid-Brazoria County Water Planning Group) and include them in the survey.

August 9, 2002

Texas Water Development Board
Attn: Phyllis Thomas
1700 N. Congress Avenue
Austin, Texas 78711

Re: Addendum to Region H Infrastructure Financing Report

Ms. Thomas:

We have completed the infrastructure financing survey of the Major Water providers in Region H. The following additions and survey results are provided for addition to the Infrastructure Financing Report dated May 31, 2002.

Addendum

The following paragraphs replace the final paragraph of Section 2.1:

Surveys were sent to Regional Water Providers to address the needs of unincorporated municipal areas within their service areas. County governments in this region are not historically responsible for water supply, and therefore were not included in the survey. As pointed out in the survey responses, unincorporated municipal areas are served by numerous small retail water providers, which will bear the financial responsibility for constructing local infrastructure. The major water providers will construct transmission systems to serve those areas, and may also serve as project sponsors for regional facilities. The role of the major providers in these areas was best summarized by the TRA in their survey response: "Trinity River Authority develops water utility supply projects by entering into service contracts with potential water user entities. Funding in the amount of 100% of the capital cost is provided by the user, typically to re-pay for the issuance of Authority revenue bonds. Until a potential user contracts with the Authority to fund water utility development, no current utility revenue sources exist to fund a project's development. TRA usually serves as the vehicle for development based on the user's willingness and ability to fund."

Within Harris County, the new regional water authorities are working with the City of Houston to contract for wholesale water supply. The authorities will construct transmission systems from the City of Houston transmission points to the individual utility districts, phasing their construction over time to meet the ground to surface water conversion goals established by the Harris-Galveston Coastal Subsidence District. The regional authorities will appear as wholesale water providers in the 2006 Regional Water Plan.

Table 2-2 is replaced with the updated table below:

Table 2-2: Summary of Survey Responses

Category		No. of Entities	Total Estimated Infrastructure Cost (1999 $)	Portion of Cost the Respondents are Unable to Pay (1999 $)
Municipalities	Surveyed**	44	$ 402,564,000	
	Responded*	20	$ 183,379,000	$ 93,780,000
Major Water Providers	Surveyed**	5	$1,043,723,000	
	Responded*	4	$674,115,000	$460,932,000
County-Other***	Surveyed**	5	$1,128,908,000	
	Responded*	4	$1,010,739,600	$756,578,900

** Values represent entire user category
* Values represent only responses received
*** County-Other areas included in MWP survey, grouped by service area

The following Section is added following Section 2.3:

2.3 Major Water Providers

The Major Water Providers in Region H were surveyed in reference to the recommended major water supply and transmission systems in the 2001 Region H Water Plan. Detailed responses could not be made for strategies projected for implementation beyond the year 2020, because the customer base does not currently exist to support these projects. The MWPs anticipate some need for state Participation in water supply projects sized to meet 50-year demand projections, since the planning and construction must precede the population growth they are intended to support. State Participation is being used for Allens Creek Reservoir, which is currently being developed by the City of Houston and the Brazos River Authority.

The MWP survey results are tabulated in Appendix A and the actual survey forms are included in Appendix B.

If you have any questions, please contact me at (713) 260-3222.

Sincerely,
Kellogg Brown & Root, Inc.

Andrew A. Sterbenz
Project Manager

Surveys received from Major Water Providers (addition to Appendix B)

Regional Water Authority – Telephonic Survey Record

Entity: North Harris County Regional Water Authority
POC: Mr. Ed Shackelford, General Manager
Telephone: 281-440-3924
Survey date: e-mail response on July 10, 2002

1. We do not have an infrastructure estimate prepared for your regional authority. As you develop your plan, what percentage do you expect to fund from user rates and taxes, and what percentage do you expect to get from state or external funding sources?

Response: The North Harris County Regional Water Authority is prepared to pay for the infrastructure at 100% if necessary. The estimated cost in today's dollars is $585 million for the total conversion from groundwater to surface water excluding the cost of purchasing capacity from the City of Houston for the water. The water cost could easily push the grand total to just under $1 billion. It would be great for the NCHRWA and its constituent utility districts/municipalities if lower interest loans from the market or grant (state or federal) monies were available, say to the percentage of 50%.

2. If you could access the state participation program, what percentage of infrastructure costs would you expect the state to provide? Under the state participation program, a portion of the facility would be owned by the state until the customer base grows enough to fully utilize the facility. The state is then repaid through revenues.

Response: The NCHRWA's master distribution system is sized to service portions of the boundary for certain dated milestones. Consequently, there is not a lot of oversizing anticipated in the phased construction. The oversizing that is anticipated is for the 2020 phased construction so that funds would not be needed until 2015 or so. Oversizing may account for 25% at the most of the 2020 conversion cost. That amount is 25% of $375 million, approximately $94 million in today's dollars.

Regional Water Authority – Telephonic Survey Record

Entity: West Harris County Regional Water Authority
POC: Mr. Dan Sallee, President
Telephone: 713-961-8500
Survey date: May 29, 2002

1. We do not have an infrastructure estimate prepared for your regional authority. As you develop your plan, what percentage do you expect to fund from user rates and taxes, and what percentage do you expect to get from state or external funding sources?

Summary of response: The WHCRWA is working on the assumption that local funding will be used to meet 100% of the infrastructure costs. The target user rate is currently $0.95 per thousand gallons for all customers.

2. If you could access the state participation program, what percentage of infrastructure costs would you expect the state to provide? Under the state participation program, a portion of the facility would be owned by the state until the customer base grows enough to fully utilize the facility. The state is then repaid through revenues.

Summary of response: State participation for oversized facilities is not currently being considered as a funding option, but may be considered as oversized transmission lines are constructed from the Jersey Village Pump Station.

Regional Water Authority – Telephonic Survey Record

Entity: Mid-Brazoria Regional Water Planning Group
POC: Mr. Wayne Szabo, Alvin Director of Public Works
Telephone: 281-388-4200
Survey date: May 29, 2002

1. We do not have an infrastructure estimate prepared for your regional authority. As you develop your plan, what percentage do you expect to fund from user rates and taxes, and what percentage do you expect to get from state or external funding sources?

Summary of response: After the initial Mid-Brazoria RWPG Study completed by TC&B in 2001, the group became inactive. The two largest cities, Pearland and Angelton, fell out of the group to pursue independent management strategies.
The City of Alvin anticipates self-funding their internal infrastructure requirements, with possible assistance only coming from the TWDB loan programs. The City is planning a new well, which will provide increased GW capacity to meet their anticipated 2030 demands.
No regional water facility construction is anticipated for the MBRWPG. Alvin and the other Mid-Brazoria members are currently discussing participation in the GCWA regional plant.

2. If you could access the state participation program, what percentage of infrastructure costs would you expect the state to provide? Under the state participation program, a portion of the facility would be owned by the state until the customer base grows enough to fully utilize the facility. The state is then repaid through revenues.

Summary of response: State participation is not an anticipated need for the group at this time. If needed in the future, it is not expected that the state would fund more than 50% of a facility cost.

WATER INFRASTRUCTURE FINANCING SURVEY

Instructions: For each of the recommended strategies in the Region H Regional Water Plan to meet your water needs, please answer the following questions. A separate sheet has been provided for each water management strategy.

Name of Major Water Provider: GULF COAST WATER AUTHORITY

Water Management Strategy Name: HOUSTON / GCWA TRANSFER

Capital Cost: $ $63,270,000

1. Using current utility revenue sources, including implementing necessary rate and tax increases, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above?

   The political subdivision can afford to pay $?.

2. If you could access the State Participation Program, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above using current utility revenue sources, including implementing necessary rate and tax increases?

   The political subdivision can afford to pay $ 0.

3. How much of the capital cost is the political subdivision unable to pay for the water management strategy identified above?

   The political subdivision cannot afford to pay $ $63,270,000 (At this time)

4. For the costs the political subdivision cannot pay, what option(s) is proposed? What, if any, state funding sources would the political subdivision consider? (Please use additional sheets, if necessary.)

This water is designated for Industry in 2050. They are not willing to pay for water needed in 48 yrs, they do not know if they will be in business the next 20 yrs.

WATER INFRASTRUCTURE FINANCING SURVEY

Instructions: For each of the recommended strategies in the Region H Regional Water Plan to meet your water needs, please answer the following questions. A separate sheet has been provided for each water management strategy.

Name of Major Water Provider: GULF COAST WATER AUTHORITY

Water Management Strategy Name: LITTLE RIVER RESERVOIR

Capital Cost: $ $78,371,000

1. Using current utility revenue sources, including implementing necessary rate and tax increases, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above?

   The political subdivision can afford to pay $?.

2. If you could access the State Participation Program, how much of the capital cost is the political subdivision able to pay for the water management strategy identified above using current utility revenue sources, including implementing necessary rate and tax increases?

   The political subdivision can afford to pay $ 0.

3. How much of the capital cost is the political subdivision unable to pay for the water management strategy identified above?

   The political subdivision cannot afford to pay $ #78,371,000. (At this time)

4. For the costs the political subdivision cannot pay, what option(s) is proposed? What, if any, state funding sources would the political subdivision consider? (Please use additional sheets, if necessary.)

The supply is not needed until 2040 & 2050 and the majority of the need is for entities which are not "currently" GCWA customers; therefore GCWA is not able to project at this time what % of the cost a revenue contract would generate.
